# INTRODUCTORY.

THIS work is a development and extension of that originally issued by the present publishers under the title of "A STANDARD DICTIONARY OF THE ENGLISH LANGUAGE." The endeavor has been to retain all those characteristic features which have stood the test of time, criticism, and popular approval, while adding all new information demanded by the world's advance in twenty years, and all new features that may promote ready and effective consultation. To attain this end, every word has been reexamined, every quotation, definition, or other item studied anew, with a view of bringing all to the highest attainable perfection by reediting and resetting. There has been in addition the strenuous endeavor to gather from every field of scholarship, art, science, exploration, commerce, industry, or invention, all new matter of real value and utility.

The governing principles of this, as of the earlier work, have been those announced by Dr. ISAAC K. FUNK in the introductory statement prefacing the original STANDARD, November 23, 1893, in the following words:

"The chief function of a dictionary is to record usage; not, *except in a limited degree*, to seek to create it. Yet, when custom or usage

#### Function of the Dictionary.

varies, it is important that a dictionary should be most careful, in its preferences, to give its sanction to the best forms and tendencies.

It has manifold opportunities to render good service to the language by characterizing certain words and variant forms of words, and certain meanings or usages, as archaic or obsolete, as foreign, dialectic, or provincial, as colloquial, vulgar, slang, or low, as inelegant or erroneously formed. In the STANDARD the aim has been to help, so far as this may legitimately be done in a work of the kind, to simplify and perfect the language.

"The editors of the various departments have been urged to keep always in mind that the essentials of a good dictionary are *comprehensiveness, accuracy, and simplicity*."

## I. THE VOCABULARY.

The "FUNK & WAGNALLS NEW STANDARD DICTIONARY OF THE ENGLISH LANGUAGE," based upon these principles, will be found to be decidedly in advance of previous editions of the STANDARD DICTIONARY in the number of words it contains. The first edition of this

#### A Comprehensive Vocabulary.

book contained 304,000 terms. Subsequently a supplement aggregating more than 13,000 terms was added, increasing the vocabulary proper to 317,000 terms. In the making of the present work no less than 513,000 terms of all kinds were critically examined, revised, or defined. Of these, 63,000 were rejected: (1) as dead beyond all hope of revival; (2) as obsolescent; (3) as of little or no value; and (4) as

of such rare or specific use as to be manifestly without the scope of a dictionary designed for practical and popular purposes. Many of

these rejected terms were mere obsolete variant forms of living words as used in the early stages of printing. Certain words current in the earlier periods of the history of the language are now omitted because, by the modern standard of culture, they are no longer approved. The decay of once useful words with lapse of time is one of the sure laws of language. Very many words used in the earlier stages of the sciences and of the mechanic arts have become obsolete, because displaced by the advancement of knowledge or the progress of invention. With obsoletes have been excluded many new words which have won transitory recognition, but give no evidence of value or permanence, such as minutely technical terms in science or industry, considered worthless by specialists in their own departments; experimental words, proposed even by some master in philosophy or science, but not adopted or given currency by other workers in the same field; nonce-words, used once by some gifted author, but never securing general acceptance.

While thus resolutely rejecting much, the purpose has been held steadily in view that the vocabulary should, first of all, embrace *all the live words* of the English language as used in the standard

speech and literature of the day. It has been deemed wise to include, in addition, those terms that are commonly used, dialectically or

otherwise, by large numbers of people in different parts of the English-speaking world.

This body of terms has been augmented considerably by the territorial growth of the United States and of Great Britain, through the introduction of words in daily use among the peoples enjoying the protection of these two nations in their recently acquired dependencies, and also through the impulse given under the new flag to the development of various branches of science, commerce, industry, or manufacture, with special local applications.

The English language has been so greatly enriched by words drawn from dialectal sources and enlisted for general use that

#### Dialectal Terms.

sufficient reason is manifest for recording them in a popular dictionary. Such words

are worthy of special consideration, and not infrequently provincial usages will well repay a careful study. The American school of Dialect Story-writing has contributed many new terms, while HALL CAINE, CROCKETT, WATSON (Ian Maclaren), and BARRIE have increased the original vocabulary of Manx and of Scottish terms. The Irish revival also has made it necessary to place on record not only new words but the names of persons and places that have been brought to the front through this revival. In this work the Editors had the valued assistance of Dr. DOUGLAS HYDE. Some space is allotted also to the English dialect spoken in Ireland which the recent labors of Dr. P. W. JORCE have made available.

New terms of Latin or Greek derivation are constantly and freely introduced in the arts and sciences. The absorption of French words is unabated, as is evidenced by such terms as *automobile, charmeuse, chauffeur, garage, hangar, limousine, massage, pannier, sabotage, tonneau*, etc.

In the vast realm of science the growth during the past quarter of a century has proved phenomenal. Geology and Mineralogy have supplied thousands of new words. The terminology of Botany, has been completely recast (see THE BOTANICAL SCIENCES). In Chemistry, the discovery of new elements has enriched our vocabulary, and their practical application has exerted a marked influence

#### Increase in Scientific Terminology.

on our civilization, while a wealth of new words has been evolved as a result of expert research seeking for the improvement or cheapening of commercial processes, as, for instance, in the case of paints and dyes. The field of radioactivity is a fertile source for the coinage of new terms, and in the department of Electricity a large number of the additions are due to developments in Telephony, Telegraphy, Electrical Traction, and allied branches. The departments of Aeronautics (including Aviation), Motoring, and Motor-boating have supplied a varied and wholly new terminology. Astronomers and meteorologists have named for us new phenomena; explorers have given us new words—Rear-Admiral ROBERT E. PEARY and Sir ERNEST H. SHACKLETON have used a number which are not to be found in the earlier editions of dictionaries. THEODORE ROOSEVELT in his *African Game Trails* has employed many Anglo-African terms for the first time. The definitions of these terms were submitted to him, and he reviewed them personally. The terms used in Forestry and Logging are based upon work done for the United States Forestry Service by GIFFORD PINCHOT, as Chief Forester, and published by the United States Government, and the vocabulary of Meteorology has been greatly enlarged under the direction of Dr. WILLIS L. MOORE, Chief of the United States Weather Bureau, Washington, D. C., by Prof. C. F. TALMAN, Librarian of the Bureau, who defined and edited all the terms in this department. The terms in Numismatics, including the table of Coins, were amplified, defined, or edited by Dr. T. L. COMPARETTE, Curator of the United States Mint at Philadelphia, by courtesy of the UNITED STATES TREASURY DEPARTMENT, BUREAU OF THE MINT.

Again, the requirements of Commerce, of the Manufacturing Industries, of the Arts, of Finance, of Insurance—life, fire, and

marine—as well as of Agriculture, Engineering, Eugenics, Political Economy, Sociology, etc., have made the coinage of many new words imperative. Political life, especially in the United States, has fashioned for itself new words, meanings, or phrases, many of which have passed into general use.

The total number of proper names included in the present edition is approximately 65,000, of which the personal and biographical entries aggregate 16,000, and the geographical names more than 30,000. Biblical names, mythological names, and bibliographical entries are all given with equal completeness.

The selection of the biographical names included was made with great care after a complete survey of the names found in the leading encyclopedias of biography—American, English, French, German, Austrian, Spanish, Italian, Russian, Danish, etc.—and in the latest dictionaries of biography and annual handbooks.

Bibliographical names are followed, where necessary, by the name of the author and the title of the book in which they occur. In order that this department may serve as a guide to the characters and contents of the principal works of fiction, brief descriptions of the personages considered are given.

The geographic names selected embrace, in general, places of historic, literary, political, or scientific interest. The purpose is to supply such information as (1) the areas of continents; (2) the areas, capitals, and populations of countries, provinces, and states; (3) the areas and capitals of ams, counties, departments, kens, vilayets, etc.; (4) the geographic position of boroughs, cities, towns, and villages, together with any important fact or event connected with them; (5) the heights of mountains; (6) the lengths of rivers; (7) the sizes of lakes, etc. For greater convenience in keeping abreast with the publications of the censuses of various European countries, the *NEW STANDARD DICTIONARY* prints statistics of population separately. (See *STATISTICS OF POPULATION OF THE WORLD*, pp. 2792-2808.)

## II. SPELLING.

In the spelling of words this dictionary generally prefers the simpler form when two ways of spelling the same word are used by acknowledged authorities. In its efforts to help in the simplification of spelling it is conservative, while favoring progress along the lines of reform agreed upon almost unanimously by the leading philologists of America and England. The forms adopted and officially recommended for use by the *AMERICAN PHILOLOGICAL ASSOCIATION*, the *AMERICAN SPELLING REFORM ASSOCIATION*, and the *SIMPLIFIED SPELLING BOARD* are given place, braced together under the usual forms, the first being indicated by "r" or *PHIL. Soc.*, and the last by "s" or *S. S.* printed after the word. Where usage in England differs from that in America, as in the spelling of *meter* (metre), *theater* (theatre), *favor* (favour), *labor* (labour), *surprize* (surprise), etc., the form preferred in England is also given. In all words fully Anglicized "e" is preferred in this work to the diphthongs "æ" and "œ," as in *e[æ]sthetics*, *fe[æ]tus*, *home[œ]opathy*. In cases, however, where diphthongal forms are still largely or prevailingly used in current literature, the two forms, in deference to usage, have been braced together in vocabulary place. In general, and in harmony with modern practise, the use of the diæresis is discontinued.

To indicate promptly and clearly the correct way of writing words derived from proper names, these words, as well as all proper names, are printed with initial capital letters. In the treatment of the vocabulary of the sciences the aim has been to follow the system of spelling and capitalization recognized as authoritative in each science.

The decisions of the *UNITED STATES GEOGRAPHIC BOARD*, of the *GEOGRAPHIC BOARD OF CANADA*, and of the *CENSUS OF INDIA*, are followed in the spelling of American, Canadian, and Indian names respectively. The authority followed for the British Isles is the *CENSUS OF THE UNITED KINGDOM*.

In order to supply a standard as well as to assist in the correction of existing confusion in both literary and lexicographic usage, the division of words into syllables in writing and printing and the com-

pounding of words have been reduced to a logical system by the foremost expert on these subjects in the United States. As a means of distinguishing a hyphenated compound from a syllabicated word, the German double hyphen is used for the first and an ordinary single hyphen for the second. Thus, in *an'ti-A-mer'i-can*, the double hyphen indicates that a hyphen is to be retained after the *anti* in ordinary writing or printing where the syllabic single hyphens (with the accents) disappear, so that the word will be regularly written or printed as *anti-American*. See *THE DIVISION OF WORDS INTO SYLLABLES*, p. xxix, 12, and *COMPOUND WORDS*, pp. xxx, xxxi.

## III. PRONUNCIATION.

The pronunciations in this dictionary are, in the main, based on the principles laid down in previous editions of this work by the late Prof. FRANCIS A. MARCH, LL.D. Words whose pronunciations are disputed were referred to an International Advisory Committee of experts in English speech.

In respelling words for pronunciation in the present work two keys are used, but quite independently of each other. Each word is respelled first (Key 1) in the Revised Scientific (or National Education Association) Alphabet, and second (Key 2) in what is commonly called the "text-book key." The use of two systems of notation is necessary during the period of transition from the second or old key to the new.

Of these the Revised Scientific Alphabet (Key 1) is a simple, logical system, in which the aim is to have one sign for each sound, and one sound for each sign, and in which only one diacritical mark is used—the macron or mark of length. Its basic principle, now adopted by many learned societies throughout the world, is the use of the fundamental vowel-letters in their Continental or so-called Roman values.

The second key (Key 2), long used in text-books and in the older dictionaries, preserves the letters of the regular spelling, but attempts to discriminate their sounds by various diacritical marks. The first key may be characterized as the more scientific, while the second is less exact and more cumbersome. For full explanation of these keys, see *SPELLING AND PRONUNCIATION*, pp. xxiii to xxix.

As a rule, pronunciation is indicated for every word in the dictionary by respelling the word in full phonetically, but it is occasionally shown by merely separating the syllables by hyphens and accent-marks. The endeavor has been to omit nothing that any one can ever need, and respellings are often given which may not be necessary. In this respect, as in others, it has been held preferable to include too much rather than too little. If a word has two or more pronunciations, the first pronunciation given is the one preferred by this dictionary.

Exceptions to the respelling of words in this work are as follows:

1. Many obsolete words and some words almost obsolete are not respelled, as they are now of little importance in the spoken language.

2. Words beginning with combining forms (as *aero-*, *electro-*) are often given in groups and not respelled.

3. Respellings are omitted after some words with prefixes like *dis-*, *mis-*, *out-*, *over-*, *un-*, when the derivative is almost or only a nonce-word, as *disimprison*; but each prefix widely used is followed by the reference, "For respellings not given below, see the primitive words." Full respelling is given, however, in every case in which it is likely to be needed, as with *disband*, *disinherit*, *dismantle*, *misuse*, *output*, *overthrow*, *unknown*.

4. In a few instances, mainly of proper names, the respelling of a first element is given only with the first word in a series containing it, as in Biblical names with *Beth-*.

Correctness in pronunciation, like correctness in diction, depends upon the consensus of usage among educated people. There are many words in the language regarding the correct pronunciation of which expert orthoepists and scholars as well as dictionaries do not agree. The correctness of English pronunciation should obviously be determined by the best and widest usage among the English-speaking peoples. Systematic endeavor has been made in this work to ascer-

tain the consensus of usage throughout the English-speaking world, by selecting from scholars and professors of English in all the great centers of English civilization an Advisory Committee of twenty-five persons, to serve as witnesses to give testimony regarding the usage in those centers, and as a jury to decide upon rival claims in doubtful cases. Disputed pronunciations have been referred to this Advisory Committee, thus composed of prominent philologists in American, British, Canadian, Australian, South-African, and East-Indian educational institutions. The decisions reached by this committee are recorded, together with the preferences of each of the leading dictionaries, in a separate section. This section is referred to by the arbitrary symbol (XII), which is printed after the respelling of nearly every vocabulary term concerning the pronunciation of which there is any doubt.

### IV. THE DEFINITIONS.

The plan of defining by definitive statement rather than by synonym, steadfastly followed in the first edition of the STANDARD, has been even more carefully carried out in the present work. The aim has been to produce definitions that are clear, concise, and exact. Definitions are expressed briefly when few words are sufficient, but encyclopedic treatment is also employed when this is material to a correct understanding of the meaning or importance of the word.

#### Defining by Definitive Statement.

Wherever practicable, the definitive statement is followed by some illustrative phrase or phrases, showing how the word, in the sense defined, may be used in connection with other words. Thus, after the first definition of the adjective *auxiliary* will be found the following illustrative phrases: "as, *auxiliary* troops; an *auxiliary* means."

#### Illustrative Phrases.

If a word has two or more meanings, the most common meaning has been given first; that is, preference is given to the order of usage over the historical order. The average man (speaking in a general way) goes to a dictionary to find one or more of three things about a word: (1) Its correct spelling; (2) its correct pronunciation; (3) its most common *present* meaning. It has been the purpose to enable him to get this information with ease and certainty; and hence nothing has been permitted to stand between the vocabulary word and its most obvious or important *current* meaning. This reverses the usual or historical method followed by lexicographers, which is to give first the etymology of the word; next, the meaning nearest the root meaning, often obsolete; and then the subsequent meanings, the present or current meaning often coming last. *But this last meaning is precisely the one most commonly sought after.* The average man is thus embarrassed and confused. It was thought better not to follow a system simply because it is logically or philosophically correct, if, practically, it hinders rather than helps the inquirer. Precedent should give way to convenience.

Special pains have been taken to make the definitions given in this work authoritative by presenting exact and recent meanings and distinctions, by giving a definite clue to the great departments and divisions of knowledge, to which special meanings are referred, and by making the general definitions comprehensive and exhaustive.

#### Exactness in Definition.

Each set of words was defined or submitted to and passed upon by a specialist in the science, art, or branch of knowledge in which the terms are included. The absolute necessity for submitting each definition, if it is to be accepted as authoritative, to an expert in its proper department is so self-evident as to need none but passing reference. The ablest specialists that could be secured were engaged for this work, the list of whose names runs up into the hundreds; among them may be especially mentioned LORD AVEBURY, FRANK BAKER, EDWARD EMERSON BARNARD, SIR GEORGE BIRDWOOD, SIR DAVID BRUCE, FRANK W. CLARKE, PHILANDER P. CLAXTON, T. L. COMPARETTE, ANDREW S. DRAPER, HENRY VAN DYKE, HENRY GANNETT, THEODORE N. GILL, THEODORE W. HUNT, DOUGLAS HYDE, FRANK H. KNOWLTON, GEORGE T. LADD, EMANUEL LASKER, JOHN PENTLAND MAHAFFY, JAMES BRANDER MATTHEWS, SIR HIRAM MAXIM, WILLIAM H. MAXWELL, S. M. MITRA, WILLIS

#### Some Noteworthy Names.

L. MOORE, ROBERT E. PEARY, EARL ROBERTS, SLATIN PASHA, GEORGE OTIS SMITH, FRANCIS HOVEY STONNARD, ALICE VINTON WAITE, HARVEY W. WILEY, DEAN C. WORCESTER, ORVILLE WRIGHT, WU TING FANG, and ELLA FLAGG YOUNG.

*Anthropology* is defined under its two great divisions of *Physical* and *Cultural Anthropology*, with an extensive finding-list of subordinate terms and of the sciences that minister to each branch of the subject. At *man*, with its numerous derivatives and compounds, is given also a full-page plate of typical heads, illustrating the various *Race-Types of Mankind*. In the branches of *Anthropology*, *Archeology* and *Antiquities* may be mentioned many comprehensive definitions, as those of the *Code of Hammurabi*, *cronelech*, *dolmen*, *hieroglyphic*, *iconomatic*, (with an illustration of a typical iconomatic inscription) *Minoan*, *Moabite stone*, *mound* (with a description of the work of the mound-builders under *Indian mound*), *Nestorian tablet*, *pyramid* (showing the dimensions and exterior and interior plan of the great pyramid at Ghizeh), *Rosetta stone*, etc.

Architecture and Art have received definitions as full as possible within the space-limitations imposed, frequent cross-references and illustrations being added with a view to consolidating the whole. Representative definitions will be found at *Arabian*, *arch*, *architecture* (with finding-list), *buttress*, *Byzantine*, *capital*, *column*, *frieze*, *Henri-Deux*, *hypostyle*, *Norman*, *perpendicular*, *pointed*, *rafter*, *Renaissance*, *rock-temple*, and *roof*. In the field of art the definitions will be found to be concise, yet illuminating. As typical examples may be cited those at *art* (with encyclopedic note), *Babylonian school*, *chiaroscuro*, *Flemish*, *impressionism*, *perspective*, *Pre-raphaellism*, *relief*, *Renaissance painting*, *school of painting*, and *sculpture*. The illustrations of famous paintings, etc., are referred to under PICTORIAL ILLUSTRATIONS.

In the Departments of Construction, Engineering, Handicraft, and Mechanical terms in general, the Editors had the advantage of consulting CHARLES ALLEN MUNN, A.B., editor of *The Scientific American*, whose specialized knowledge, assistance, and suggestions proved of immeasurable value. The aim was to cover civil and mechanical engineering and their allied trades as completely as is possible in a popular dictionary. No effort has been spared to make the definitions at once comprehensive and illuminating, and in all explanatory matter, from that covering the most complex of our modern mechanical triumphs to the description of common household tools, to use language free from unnecessary technicalities. For example, the definitions of *chassis*, *engine*, *locomotive*, *marine engine*, *motor-boat*, the treatment of *automobile* under *motor-vehicle*, and the extended definitions and descriptions under *printing-press* may be cited, with their illustrations. The illustrations under *locomotive* and *printing-press* are particularly noteworthy and show at a glance the state of perfection each department of manufacture has attained. Under *wire* will be found a very complete treatment of the different varieties and a table of *gages*, with diagrams of the United States and British standard *wire-gages*. At *watch* is shown the interior of an American open-faced watch, with the various portions of the works explained and described individually, and a complete list of parts given.

Modern *steel* and *iron-construction* are fully covered under *construction*, with a full-page plate, and under *concrete* are given a definition and an illustration of a monolithic concrete house, furnished by THOMAS A. ENISON. At *viaduct* are a comprehensive definition and an illustration, and at *bridge* are given definitions and illustrations of the principal types of bridge-construction. Under *Panama Canal* are furnished the principal facts and statistics relative to this great engineering and constructive achievement, with a profile section of the canal showing the location and elevation of the locks.

Handicraft terms have been gathered with great completeness, and in most cases will be found grouped under the different trade-names, tho the more important *Handicrafts and Trades* of them are defined in vocabulary place. There are many thousands of handicraft terms; as, among plumbers, *dummy*, *eel-pump*, *putty-joint*, *riser*; among house-builders, *mouse*, *deadening*; in the manufacture of

brick, clapper, cuckhold, Dutch clinker, unsoiling. Such terms are used particularly in builders' specifications, in handbooks, in commercial and news reports, in contracts, in court-rooms, and in conversation, and they are finding their way more and more into literature. Such common mechanical aids as the *bell*, *pulley*, *wedge*, and *wheel* are exhaustively covered, while such tools as *adz*, *ax*, *chisel*, *drill*, *file*, *hammer*, *saw*, etc., are described with all their special modifications.

Aviation and Aeronautics have been very fully covered under the personal supervision of ORVILLE WRIGHT, with the aid of many illustrative diagrams, among which may be mentioned the full-page plates at *aeronautics* and *aviation*, with the definitions and finding-lists under these words, and the definitions of such technical terms as *aeroplane*, *biplane*, *dirigible*, *helicopter*, *hydroaeroplane*, *monoplane*, *volplane*, etc., which afford in brief a complete exposition of the art of aviation as it exists to-day.

In selecting the terms in Medicine, Surgery, and their allied sciences, Anatomy, Physiology, Pathology, and Bacteriology, an attempt was made to determine: (1) whether the term is in actual use or has been in use during a period that would naturally bring it under the notice of a general reader; (2) whether it is likely to remain in use for an appreciable time. It is believed that the vocabulary will be found unusually full in this respect. Representative definitions in these branches are those at *medicine*, *eye* (with illustration of the inner structure of the eye), *muscular system* (with illustration showing location of the principal muscles), *nerve*, *nervous system* (with front view of the human nervous system), *arterial system* (with chart showing the circulatory system of the body as a whole and of the principal organs respectively), *antidote* (giving a list of the proper antidotes to be used in the more common cases of poisoning), *skeleton*, *craniometry* (with tables of craniometrical points, lines, planes, angles, and indexes), *brain* (with a view of the median section of the human brain), *heart* (with encyclopedic note and illustration), *blood*, *circulation of the blood* (with explanatory note and illustration), *fever* (characterizing various types), *lung*, *cell*, *epithelium*, *germ*, *germ-layer*, *metabolism*, *phthisis*, *tuberculosis*, *cancer*, *tumor*, *surgery*, *bone* (with a list and illustration of the bones in the human body). Under *bacteriology* are included a full-page illustration in colors of the forms of *bacteria* and a full description (under *culture*) of the various methods for their propagation, and at *Röntgen Rays* are given two full-page plates showing apparatus and radiographs of different parts of the body, outlining the anatomical structure, as well as a comprehensive definition of this form of radiant energy.

The definition of *law* is very full and complete. Under this are given clear definitions of *civil*, *common*, and *constitutional law*, *martial law*, *natural law*, *positive law*, *statute law*, etc. Then, under *act* will be found an extensive list of the most important acts of English and United States legal history, as the *Act of Elizabeth*, the *Act of Rescission*, the *Carey Act* (or *Desert Act*), the *Morrill Act*, the *Sherman Act*, etc., with dates and general terms of each. Some important *acts*, as the *Act of Settlement*, *Act of Uniformity*, etc., are listed with reference to the second element, as *settlement*, *uniformity*, etc., where the definition is fully given. Turning then to *case*, there will be found a long array of the most celebrated or important *cases* decided under English or American law, as the *American Tobacco Company case*, the *bank-tax case*, the *Northern Securities case*, the *Standard Oil case*, etc., under United States Law; *Bradlaugh's case*, *Bushnell's case*, *McNaghten's case*, etc., under English Law; the *McLeod case*, under International Law, etc.

It should be mentioned here that under *law* is also given a very extensive definitive list of the various uniformities recognized as *laws* in science, mathematics, language, etc.; as, *Ampere's laws*, *Arago's law*, *Coulomb's law*, *Grimm's law*, *Malthus's law*, *Mcndel's law*, and numerous others.

In the Department of Language the word *language* itself has a very comprehensive definition, showing how languages are grouped

according to structure, etc., with which is associated a Table of the *Principal Languages of the World*, based on T. G. TUCKER's *Introduction to the Natural History of Language*, in which the various languages are grouped under divisions, subfamilies, and branches, and details are given of the principal characteristics, development, and regional scope of each. At *alphabet* is an encyclopedic article relative to the origin of the alphabet, and under *Aryan*, *Indo-Chinese*, and *Indo-European* are valuable definitions. In the department of *grammar* proper may be noted the definition of *grammar*, and those at *adjective*, *case*, *conjugation*, *noun*, *plural* (giving rules for the formation of plurals of English words), and *pronoun*.

In defining the terms used in Psychology—including Psychophysics and Experimental and Physiological Psychology—and in Philosophy—including Metaphysics, Ethics, and much of Logic, Esthetics, and Theology—great pains were taken to overcome, so far as possible, the difficulties inhering in the very nature of the conceptions which it is intended to cover by these terms. Of these difficulties, perhaps the chief consists in the largely abstract character of the conceptions themselves.

Another difficulty arises from the fact that these branches of learning so largely make use of common words, but with specialized meaning. Such words as *Consciousness*, *Thought*, *Feeling*, *Pleasure*, *Pain* are among the most difficult of all words to define exactly. Even more conspicuously is this true of such words as *Soul*, *Mind*, *Relation*, *Time*, and *Space* in their metaphysical signification; while such purely negative conceptions as the *Unconscious*, the *Unknowable*, the *Unrelated*, and certain uses of the words *Absolute*, *Infinite*, etc., do not, properly speaking, admit of definition at all. The endeavor has been to give in each case the best definition consistent with the limitations of the subject.

In the consideration of new psychological terms the standing of the originator of the new word, the stress of need for it, the amount of acceptance which it has already gained, and the importance of the distinctions, or the alleged discovery, or the new thought, which it is intended to mark out, must all be taken into account. The main topics in this department have been treated in an encyclopedic manner. Among these may be cited those of *philosophy* and *psychology*, which are especially full, and those under *attention*, *being*, *consciousness*, *desire*, *ego*, *fatigue*, *Hegelianism*, *idea*, *idealism*, *Kantianism*, *method* (under which head many methods in these departments are defined), *mind*, *Platonism*, *reaction*, *reflection*, and *self*.

In the Departments of Mathematics and Physics, the list of terms will be found to include everything of value required by a popular dictionary. In writing the definitions designed for general use the aim was to make them clear to the ordinary reader and to avoid formulas and technical terminology wherever possible. The dominant idea governing the work was that it was designed for a general dictionary—not a technical encyclopedia. Occasional terms so very simple that it seemed useless to define them for the dictionary-user of ordinary intelligence have been omitted.

Among the more important astronomical definitions, all of which have been covered very fully, may be cited those at *astronomy* (which has a finding-list of the more important terms in the science), *comet*, *constellation*, *satellite*, and *star* (all of which have Tables associated with them), *aurora*, *edipsc*, *Leonid*, *Perseid*, *precession*, and the names of the planets, including the *earth*, together with the *sun* and *moon*, all of which have been treated in a statistical manner after reference to the most recent discoveries. Compare also the definition of *telescope*, describing and classifying the different classes, and the full treatment of the *spectroscope*.

Definitions in the Department of Electrical Engineering are based, so far as possible, upon the Standardization Rules of the AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS. Terms relating to modern electrical theory and the multifarious manifestations of the existence of electrons were defined only after a considera-

tion of the most recently published results of investigation by the Cambridge school of physicists. The more common terms in both Theoretical and Applied Electricity are defined so as to include those meanings which are commonly ascribed to them in standard text-books and in representative electrical periodicals. A number of words have been excluded because they are not currently accepted, because they are based upon a misunderstanding of the underlying theory of facts, because they are misleading, or because their use has been inhibited by conventional scientific agreement.

The industrial applications of Electricity in the many practical activities it controls have been treated with insistence upon scientific accuracy joined with the utmost attainable simplicity, to make them clear, as far as the subject permits, to the non-technical reader. Here may be specified *telephone* (explaining both the ordinary Manual System and the Automatic, now largely used in the Western United States and elsewhere), *telegraph*, and *wireless telegraphy*. Illustrations of apparatus used are supplied especially in the full-page plates of *Wireless Telegraphy* and *Wireless Telephony*. Electric Traction and Electric Lighting are very fully treated.

Great care has been exercised in the treatment of Music and Musical Instruments, many special points receiving encyclopedic

**Music and Musical Instruments.** *point, harmony, key, mode, music, neume, notation, note, opera, orchestra, pitch, staff, and tone.* Under *opera* is also given a list of the more important operas, with their composers and dates of production. The different instruments are comprehensively treated, as in the cases of *harp, organ, and pianoforte*, and a full-page plate of musical instruments is given at *musical*, and at *national* a four-page insert appears, showing the opening bars, original words, and English translation of many *National and Patriotic Songs* of the world.

Naval, Military, and Nautical Expressions have been treated very fully, much care being taken to differentiate between the United

**Naval, Military, and Nautical Expressions.** States and foreign usages and to give the latest information, whenever possible, covering new developments in the various branches. Illustrations have been used profusely, as in the full-page plates at *ship, steamship* (showing the "Imperator," a representative modern ocean passenger-steamer, and a number of typical steam-vessels), and at *war-ship*, giving views of many representative vessels of the American and British navies. Among the definitions, which are full, several being illustrated by cuts, may be mentioned those at *army, battleship, cannon, cruiser, dreadnaught, epaulet, fortification, gun, knol, navy, propeller, quartermaster, semaphore, squadron, steamboat, submarine, and torpedo*.

The Department of Games has been very fully covered, illustrative diagrams being given wherever practicable. Thus, plans of the field in each case, together with a finding-list of the principal terms used in the game, are given under *baseball, court-tennis, cricket, football* (diagrams of both American and Association fields), *lacrosse* and *lawn-tennis*. Under *golf* (all terms under which head were passed upon by W. J. TRAVIS, sometime champion of the world) is given a finding-list and an illustration of different styles of clubs; under *boxing, fencing, and single-stick* are shown the various positions of attack and defense; under *swimming* the different strokes are illustrated, as well as the proper positions to be taken in effecting a rescue; under *wrestling* are shown the various holds and falls, etc. *Chess* (passed upon by EMANUEL LASKER, champion of the world) and *checkers* or *drafts* are exhaustively covered, with all their terms, the moves and the principal openings being given in each case, and under *bridge* is given a table showing the method of scoring and a finding-list of the principal terms.

For the Department of Biology the terms presented were gathered from an extensive reading of recent biological literature, and the additions reflect a profound change in the nature of the activities of biologists at the present time. Whereas, a few years ago, the additions came largely from the systematists, now the new terms represent conceptions in Morphology, Physiology, Bacteriology, and Experimental Medicine. Improved technique and refinement of ob-

servation react mutually with new hypotheses and new theories. The result is that investigators are prone to coin new terms to express a theory believed to be warranted by the partial evidence before them. Such terms as remain unnoticed by their contemporaries are excluded; such as have been widely quoted are included and follow the definition given by the author in his original paper, altho some of these have already become rare. On the other hand, care has been taken to make as complete as possible the list of terms and the definitions concerning technical operations or results.

In the Botanical sciences unprecedented progress has been made in recent years. Ecology, Histology, Taxonomy, Cytology, and Phytogeography have been practically reconstituted. Extensive investigations into all these subjects have impressed new meanings on old terms and have necessitated the coinage of hundreds of new terms. The terminology of Botany required complete recasting through the action of the International Conference of Botanists held in Vienna in 1905, thus making it necessary to rewrite most of the definitions in this science. Economic Forestry has a terminology peculiar but indispensable. Thus the scientific vocabulary of the vegetable kingdom will be found to have greatly increased in this new work.

The vegetable kingdom comprises over 200,000 species. To compress botanical terminology within the limits of a general dictionary, some method of exclusion must be adopted. All words were judged on their individual merits. But terms interesting only historically, or ephemeral words and phrases, have been omitted.

While full provision is made for the reasonable needs of the scientist, the stronger claims of the general reader are not overlooked. Vernacular plant-names, with their synonyms and the definitions in horticulture and floriculture, will be found unusually numerous and full. The leaves and fruit of trees are pictured in connection with the appropriate definitions, as at *beech, birch, chin-kapin, maple, walnut*, etc., and a full-page plate in colors of *Typical Woods* further illustrates this topic. *Flowers* are very fully treated under their common as well as under their botanical names (see *lily, rose, violet*, etc.), and two full-page plates in which *Flowers, Wild* and *Cultivated*, are delineated in half-tone engraving.

For years to come the exports of the island possessions of the United States must be mainly agricultural. Special effort was made to include in this work the native names of all economically valuable plants cultivated in Porto Rico, Guam, Hawaii, and the Philippines. Definitions are also given of most of the tropical plants now naturalized in California, Florida, and the southwestern United States.

Under Agriculture prominent terms are extensively listed, supplying the material for cross-references. Lists of various varieties of agricultural products are very extensive (see *apple, coffee, cotton, grape, orange* [note the description of the *seedless orange* and the method of its propagation], *peach, pear, plum, tea, tobacco*, etc.).

**Agriculture.** Agricultural implements are very fully treated, as at *harrow, hoe, mower, picker, plow, reaping-machine, and threshing-machine*, and a full-page plate of Agricultural Machinery is given. Diseases of plants, with the insects or other agents producing them, are treated (as at *boll-weevil, phylloxera*, etc.). Varieties of domestic animals are listed and described. (See *cattle, dog, fowl, goat, horse, sheep, swine*, etc.), with illustrative plates of typical specimens. In the treatment of the names of domestic and some other animals the *female* is named under the definition of the *male*, thus serving both as antonym and as remembrancer.

In the Department of Zoology the rules of inclusion and exclusion followed in the first edition were followed also in this, with slight modifications to permit of the recording of terms now common in current literature.

**Zoology and Its Branches.** Changes in scientific nomenclature of zoological terms that have been suggested but not yet universally accepted are not followed. Through discoveries, experiments, and investigations by special experts attached to the UNITED STATES DEPARTMENT OF AGRICULTURE, the range of the Animal Kingdom has been greatly widened, and the information thus gleaned has been made available to the Editors. In addition, the Editor of the department himself contributed a large number of definitions of new

terms now current among the English-speaking peoples of Cuba, Guam, Porto Rico, Hawaii, and the Philippine Islands. In this department material assistance was rendered by Mr. WILLIAM CHURCHILL, sometime United States Consul-General at Samoa and Tonga, who also contributed many Samoan, Melanesian, and Polynesian terms current in English literature. Here, also, the practical and popular element has been given place beside the scientific. The various animals, wild and tame, have been defined and pictured with great fulness and clearness, and with especial care to discriminate the different varieties by locality and characteristics, as the *Arabian* and the *Bactrian camel*, etc. (See *Bear*, *Camel*, *Cat*, *Lion*, *Tiger*, etc.) Note also the domestic animals referred to in the section AGRICULTURE, above. Birds of all varieties are defined and pictured under their familiar names (with addition of their scientific classification), and a full-page plate of *Birds* is added.

In the branches of Entomology and Ichthyology the definitions will be found in harmony with accepted modern scholarship and the results of scientific and expert investigation. The practical importance of many entomological subjects has been held constantly in mind. (See *Boll-weevil*, *Boll-worm*, *Browntail*, *Gipsy-moth*, *Mosquito*, etc.) Attention may here be called to

#### Entomology and Ichthyology.

the full-page plate of *Butterflies and Moths of Europe and America*, with the popular

and the scientific name of each. In the branch of Ichthyology the definition of *fish* has been treated encyclopedically, and a finding-list of the principal fishes is given in connection with it, together with an illustration showing the skeletal structure of a fish. Among other noteworthy definitions are those at *cod*, *cuttlefish*, *dolphin*, *lobster*, *porpoisc*, *ray*, *salmon*, and *shark*.

Of Chemical terms and definitions submitted, a few were eliminated as obsolete or unimportant; the majority, however, were carefully considered as to proper chemical phraseology, questions of fact, and correctness of formulation as regards composition. To

this end resort was constantly had to the latest available literature and original papers. All terms submitted received a second checking, both as regards questions of fact and for the detection of typographical errors, that they might correspond to the latest facts and present day conceptions. The Table of Chemical Elements has been expanded to meet the latest discoveries, so that it now contains 81 elements, giving with each the *derivation* of the name, the chemical *symbol* used in formulas, etc., the *atomic weight*, the *specific gravity*, the *fusing- or melting-point*, the *valence*, the *date when discovered*, the *name of the discoverer*, and a compendious statement of *where and how found*. In connection with this a very full statement relative to what is termed the *periodic law* underlying the elements has been given under *periodic*, together with a table of the Periodic System, indicating the method under which the elements have been grouped according to this system.

In the Department of Geology a systematic revision was made of all the terms appearing in previous editions, in order to make all descriptive matter conform to the latest discoveries and conclusions of eminent geologists

throughout the world. By this means it is hoped that the geological definitions as a whole will be found to be entirely comprehensible by a layman and yet sufficiently thorough to afford reliable information for the student. In the various branches consultations were held with leading experts about all doubtful and disputed terms, as, for instance, with Prof. CHARLES PALACHE, of Harvard University, regarding crystallography, in the effort to eliminate as far as possible the errors found in various works of reference upon this subject. The definitions of many recently proposed terms were submitted to their authors, who passed upon them personally, and no term was admitted that is not recognized as authoritative by expert usage.

The double-page Table of Geological History was prepared with the utmost pains, after consultation with various geologists of the UNITED STATES GEOLOGICAL SURVEY, and in accordance with the views expressed by a number of other eminent geologists, who have carefully discussed the various details of its system and scope. It is believed to be considerably in advance of anything of a similar nature heretofore published in the English language as regards the

stratigraphy of America and Europe, being, as it is, the first serious effort to collate in a comprehensive form the geological growth of the two continents in such a shape as to be readily accessible to, and available for use by, the general reader. In its preparation no one

#### A Unique Geological Chart.

authority was followed throughout, but the eclectic plan was adopted of consulting all available good authorities and deciding doubtful cases according to the preponderance of evidence. Where matters are extremely uncertain a tentative adherence is given to the more convincing evidence, and a note directs attention to the fact that the question still remains unsettled. It is hoped that this table, by its fulness, its scientific accuracy, and its inclusion of the latest geological information, may be of material service to all who consult it.

Full as the many specifications above given may appear, they are but pointers to the wealth of information to be found by the reader who will follow any subject with intelligent study from definition to definition throughout the work.

## V. ETYMOLOGY.

The same general plan of concise treatment which characterized the work of this department in the first edition of the STANDARD DICTIONARY, is followed in the present work. The etymologies, which were prepared under the direction of Prof. FRANCIS A. MARCH, Ph.D., trace the meaning of any given word back in a direct line, avoiding mere guesses at derivation and the temptation to make

**Conservative Methods** extended incursions into cognate languages. **Followed.** The advantages of giving, along with the

English word, the word similar to it in sound, form, or idea, in the Dutch, French, German, Italian, Spanish, or Swedish, have not appeared sufficient to justify the use of so much valuable space. Bearing in mind that a popular dictionary should aim to provide the information it contains in easily accessible form, words derived from languages whose alphabets differ in the forms of their letters from those of the Roman letters, as the Arabic, Greek, Hebrew, Sanskrit, etc., are transliterated so as to be easily read by any one not familiar with the words in their native dress.

## VI. AIDS TO CONSULTATION.

The main purpose kept in view throughout this work has been to present its contents in such a way that the reader shall always

**One Alphabetical Order** have *direct and easy access* to the information he seeks. Therefore the plan of placing

**Throughout.** all proper names, whether Biblical, classical, or personal, geographical or bibliographical, in their alphabetical places in the main vocabulary was adopted, so that the reader may find the data he requires as readily and expeditiously as possible. This

**Proper Names in** method is a distinct advance upon that formerly in vogue of giving in several separate

**Alphabetical Place.** alphabetical groups various lists of proper names, classified as Bible, bibliographical, Greek and Roman, biographical, and geographical, often compelling the reader to turn to a number of these alphabetical groups, according to the plan of the work, before finding the information sought. In this edition of the STANDARD DICTIONARY the inquirer has to look for the term that he seeks in *but one place*—a detail in which this work differs from all its predecessors. It is believed that the method

**One Word One Place.** here introduced—*every word in its own place throughout the alphabet*, no matter what the word may be—will so commend itself by its simplicity and convenience that the only question will be why it has not always been employed.

In order that the reader who wishes to trace the relation of terms in the sciences, or in other cognate subjects, to one another may do so with ease, cross-references are made between correlated terms in such a way that a complete survey of the science or subject is afforded. By a system of grouping terms, which originated with the

#### Grouping and Correlation.

first edition of this work, the facts pertaining to the subjects grouped are not only made easily accessible, but also permit of more comprehensive treatment. An examination of the text under such headings as are given below will illustrate the system. *Abbreviations* and *degrees* are distributed in alphabetical place throughout the text, but the

chief of these are also grouped under the parent term. The names of *authors, battles, coins, colors, constellations, dyes, elements, flowers, fruits, grasses, languages, measures, orders of merit, precious stones, stocks and tribes, stars, typical shades and hues* (see *SPECTRUM*), *weights*, etc., are tabulated and, in addition, all the more important of them are defined in their alphabetical places in the vocabulary. Lists of the more common *Americanisms* and *Britishisms* in use are grouped, for the first time in a popular dictionary, under the one or the other of these terms, but are defined in their respective places in the book. This plan of classifying terms under a general group-name serves a double purpose. It supplies the means of comparison and serves as a word-remembrancer or guide to the finding of some forgotten word of which the parent term is known. Yet in all such groups the method of *one alphabetical order throughout* will be found to have been steadily maintained.

Certain self-explanatory terms, or words whose meaning is too easily understood to require definition, are grouped under such prefixes as *in-*, *inter-*, *un-*, prepositions like *under*, etc. When necessary the reader is reminded of these groups where they occur by specific reference given at the foot of the page.

Another exclusive feature of this work, adopted for the benefit of those seeking the pronunciation of words, is the placing of the key-words indicating the systems of pronunciation used in this dictionary at the *top of the page* instead of at the bottom, enabling the student to follow the key-line with increased facility.

The key-words at the top of the pages present to the reader the first defined term on the left-hand page and the last defined term on the right-hand page. This enables any one who consults the book to see at a glance whether the word sought occurs upon either of the two facing pages to which he may turn.

Thus, if one is seeking the word *livid*, and opens to pages 1446-1447, he will find in the upper corner of each of these two pages the key-words  $\left\{ \begin{array}{l} \textit{literal} \\ \textit{little} \end{array} \right\}$ , showing instantly that *livid* can not be there contained. No searching down the columns is necessary. One has simply to turn the page. Then, in either upper corner of pages 1448-1449 will be found the key-words  $\left\{ \begin{array}{l} \textit{little} \\ \textit{Livistonia} \end{array} \right\}$ , showing that somewhere within the limits of those two pages *livid* will surely be found. This system will, it is believed, greatly facilitate the rapid location of any word desired.

## VII. SYNONYMS AND ANTONYMS.

A characteristic feature of this work is its plan of presenting Synonyms and Antonyms. This department, which has been largely amplified, and now embraces 7,500 separate lists and discussions of more than 23,000 synonymous terms, not only gives lists of synonyms, but in brief paragraphs of comparison undertakes to bring out simply and clearly the finer, nicer distinctions between words similar in meaning, especially with reference to established usage at the present day.

The facts, principles, and plan of this portion of the work are thus stated by the Editor of this department:

The English, as a composite language, has a large number of words, especially those of Latin and French origin, that were originally almost or quite identical in meaning with corresponding Saxon words. With the advance of the language these have been steadily differentiated in meaning or use, until it has become exceedingly difficult to find any two words that are not distinct from each other at some point or in some respect. This process, still actively going on, is constantly enriching the language, enabling the writer or speaker to find an exact term to express almost any shade of thought as no other word could quite so perfectly express it.

In this work, therefore, the term *synonyms* has been used in a general sense to denote pairs or groups of words similar in meaning or associated in use, and has even been extended in some instances to include the discussion in a single article of contrasted terms. Thus such words as *induction* and *deduction*, *infection* and *contagion*, *imagination* and *fancy* can be more fully defined by comparison and contrast than would be possible by the treatment of each term separately.

The method of discrimination constantly followed has been *to take in each group some one word* whose meaning is well known or capable of being

succinctly stated, and to compare similar and dissimilar words with this central term, thus avoiding the vagueness often produced by easy sliding from synonym to synonym, while at the same time preserving the unity of the group.

Where a word has accepted usage in more than one prominent sense, synonyms have been given at one point for a single signification, and references made to other points for treatment of other meanings. In accordance with the general plan of the work, the synonyms have been held closely to present popular usage. Many elegant archaisms and recondite literary uses of interest to scholars have been left to the definitions and dropped from the synonyms.

Synonym discussion gives *definition by comparison*, each word better understood and better remembered because of its differentiation from others. One who understands the art of selection can choose promptly from any group the very word needed in a particular case, thus giving to a single sentence an instant definiteness and conclusiveness such as could not be attained by a paragraph of explanation.

The interchangeableness of words is also an important consideration. Frequent use of a single word in one sentence or paragraph gives the effect of repetitiousness, and hence wearisomeness, of thought. This is often instantly relieved by the substitution of an interchangeable word. To make such interchange discreetly and effectively, one must know the exact content of each of the words compared—knowledge which only the adequate study of synonyms can impart.

Antonyms, or the opposite meanings of words, are given freely in this work. They are not to be found in any other dictionary. Antonyms have the advantage of *definition by contrast*. The meaning of a word is often made clearer by the sharp statement of what it is *not*, as when we note that *pure* signifies "*not* adulterated or mixed," "*not* defiled, polluted, sullied, or tainted," "*not* immodest or indelicate." A statement is often made more effective by vigorous antithesis. Nearly 5,000 antonyms are given.

## VIII. QUOTATIONS.

In the treatment of illustrative quotations this dictionary is believed to be more distinctly representative of the literature of the English-speaking world than any other similar work. More than 100,000 volumes were read to supply the 2,000,000 quotations submitted. About 32,000 selections were made from this vast aggregation, from modern books including the very latest standard works of reference. Avoiding the common practise of spelling the words given to illustrate their usage in the forms preferred by the dictionary quoting them, the NEW STANDARD DICTIONARY has taken pains to follow the author's spelling to the letter in every case. The places of quotations used to verify or illustrate the meanings of words are so indicated that they can be easily found—the name of the author and the title of the work, the volume, chapter, and page, and usually the name of the publisher and date of publication being given: as, *Prescott Ferdinand and Isabella* vol. ii, pt. ii, ch. 1, p. 286. [L. 1860.]; which means that the quotation given is to be found in Prescott's "*Ferdinand and Isabella*" in volume ii, part ii, chapter 1, page 286, in the edition published in 1860 by Lippincott. The abbreviations used to indicate publishers will be found on pp. xxxvi, xxxvii. Stock dictionary quotations—that is, those that have done service for years in dictionaries—were discarded, with few exceptions, and their places supplied by others believed to illustrate better the meaning of the words defined, while giving additional authority for their use in any specified sense. Practically all English literature from Chaucer's time to the present was ransacked for this purpose.

With the standard literature of the past, the current literature of the present was also recognized. Much of the English printed in our periodical press is of the purest type in use to-day; none is more forceful; none more incisive. The modern newspapers and magazines are true molders of thought and accurately reflect the culture of the time, especially in relation to the English-speaking peoples, inasmuch as of the total of 70,000 periodicals published throughout the world no less than 35,000 are in the English language. Therefore the daily papers and the periodical press have been freely drawn upon to illustrate by quotation the virile language of the time

Newspapers and  
Periodicals Quoted.

## IX. PICTORIAL ILLUSTRATIONS.

The pictorial illustrations made especially for this work were produced in accordance with the rule that pictures in a dictionary should be definitive of the objects. A dictionary should not be a picture-book; yet this rule has been deviated from so far as to permit the admission of a few pictures, largely because of their historic or general encyclopedic value. The drawing and engraving of the illustrations were done in harmony with the general plan of the dictionary, that of having the work of each department committed, so far as feasible, to specialists.

Wherever possible, typical specimens of the fine arts are given. Reproductions of famous pictures by FRA ANGELICO, ROSA BONHEUR, DELLA ROBbia, GUSTAVE DORÉ, DRÖLLING, GÉRÔME, MICHELANGELO, JEAN FRANÇOIS MILLET, NICCOLO PISANO, RAFFAEL, GUIDO RENI, RUBENS, VELASQUEZ, PAUL VERONESE, LEONARDO DA VINCI, and others are used.

## Reproductions of Masterpieces.

The pictorial illustrations number more than 7,000. If the items included in each picture-group were taken into consideration, the total would amount to more than 10,000. As a rule, every illustration given in this work has been inserted to serve a definite purpose—to supplement verbal definition by pictorial demonstration. Often it is much easier to show by a picture what a thing really is than to define it by mere words.

## Wealth of Illustrative Matter.

Special efforts were made to supply up-to-date illustrations, as will be seen by consulting the maps of the *poles* and any illustrations of the various mechanical devices and appliances. Many of these have been already mentioned under the topics to which they specifically apply. In Electricity, Engineering, Handicrafts, and Mechanical Arts in general, the very latest model available has been secured and presented, as will be seen under *aeroplane*, *caisson*, *chassis*, *marine engine*, *motor-boat*, *printing-press*, *steamship*, *three-high rolls*, *turbine*, *watch*, *wireless telegraphy*, *wireless telephony*, etc.

## Up-to-date Presentation of Technical Subjects.

In some cases, the better to aid comparison, a system of grouping has been adopted. A systematic plan of illustrating all sports, games, popular pastimes, setting-up exercises, etc., with accessories and dimensions, where needed, has been carefully carried out.

Among the full-page illustrations are a reproduction, in facsimile, of the *Declaration of Independence*; new full-page plates in black and white prepared under the direction of the

## Typical Illustrations.

AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, of New York, showing in pictorial form the history and development of *aeronautics* and *aviation*, and giving detailed views of the latest models of *aeroplanes*; two plates of modern *steel construction*, prepared under the personal direction of M. M. LE BRUN, architect and designer of the Metropolitan Tower, New York, and CASS GILBERT, architect and designer of the Woolworth Building, New York; two plates of *motor-vehicles*, including passenger and industrial and commercial vehicles, and showing the detailed mechanism of a typical car, prepared with the aid of the SOCIETY OF AUTOMOTIVE ENGINEERS and AUTOMOBILE TOPICS of New York; a plate of *wireless telephony* prepared by the WESTERN ELECTRIC COMPANY, New York, and one of *wireless telegraphy*, prepared by the RADIO CORPORATION OF AMERICA; and a remarkably clear plate of *diamonds* and *pearls*, prepared under the direction of DR. GEORGE F. KUNZ, gem expert of TIFFANY & COMPANY. This plate shows some of the world's noted diamonds, cut and uncut, with the sizes and weights of diamonds and pearls.

The plates of *fire-fighting appliances*; of the *leaves* of various trees; of *flowers*; of *birds*; of *dogs*, *horses*, *cattle*, *sheep*, and *swine*; the *table of geological history*, etc., will be found highly instructive. The many colored plates distributed throughout the book, as those of *bacteria*, *flags of the nations*, *coins*, *national coats of arms*, *pilot- and signal-flags*, the *solar spectrum* and *standard colors*, etc., are not only highly informing in themselves, but are striking examples of the lithographer's art of to-day.

Wherever a useful purpose is served by so doing, the proportion which the illustration of an animal bears to the animal illustrated is recorded in fractional numbers with the legend.

A plate of *solar spectrum* and *standard colors* is given in two sections, the upper part showing the spectrum, the lower part

being devoted to typical colors. Connected with this is the exact definition of the six primary colors of the *spectrum*, of which a table will be found, together with the analysis of several hundred shades and tints now before the public in various forms, many of which bear fancy names. This branch of the work was performed in the Department of Physics of Columbia University under the supervision of Prof. WILLIAM HALLOCK, Ph.D., and is based on the solar spectrum—nature's own standard of colors. It is to be hoped that Professor HALLOCK's labors may lead to the general use of the system he has devised, and prove a great step toward establishing that long-looked-for desideratum—a standard of colors.

## X. CHARACTERIZATION OF WORDS.

To aid those who consult the dictionary, certain words and meanings are characterized in such a way as to enable one to judge of their standing and application at a glance.

## Class and Use of Words Denoted.

If such a characterization indicates a language distinction—that is, if it classifies the word or meaning as foreign, non-reputable, or local—it is enclosed in brackets; as [P. I.] for Philippine Islands; [Colloq., Eng.] for colloquial in England; [Local, U. S.] for local in the United States. If it marks a class distinction—that is, if it designates the use or meaning of the word as principally confined to some class of persons or objects, as in technical or scientific use—it is italicized; as, *Med.* for *Medical* or *Medicine*, *Polit.* for *Politics*, *Bot.* for *Botany*, etc. In characterizing scientific and technical terms, care is taken to distinguish between words that properly belong to the scientific vocabulary and words that are common names of things of which the science treats; thus, *Mollusca* is marked *Zool.*, but *mollusk* has no characterization. In accordance with the plan of distribution of branches of art and science adopted in this work, a distinction is also made between terms and meanings confined to a branch of a science and those used more generally in that science; thus, *Pathol.*, *Anat.*, etc., have been used wherever practicable instead of *Med.*; *Entom.*, *Helminth.*, etc., instead of *Zool.*; and *Mech.*, *Optics*, *Elec.*, etc., instead of *Physics*. Sometimes, however, the characterization is embodied in the definition, preceded by "In" or "Among" (as, "In the Romance languages," "In astronomy," "Among zoologists," etc.); sometimes it is placed at the end; as, "said of birds of prey."

The definitions of foreign words that retain their original form and are always spoken with their original pronunciation are preceded by the abbreviated name of the language from which they were taken; as [F.] French, [It.] Italian. Foreign words partly modified in form or pronunciation, or words or senses used specifically in some foreign country, are usually marked by the name (generally abbreviated) of the country or region in which they are used or whence they come; as [S. Am.] South America, [Egypt.] Egyptian. The word *dialectic* is used to mark such words as have place in a recognized dialect, and *provincial* to mark rural as opposed to metropolitan usage, or that restricted to colonial or outlying regions, as distinguished from general usage. Words adopted from native tongues, or from the languages of previous colonists by English residents in India, etc., are marked [Anglo-Ind.], etc.

Words that are not used in the best literature are marked [Colloq.], [Slang], [Cant], etc. *Colloquial* words, altho not in literary use, are

Rank and Worth of Words Indicated. such as might be used in familiar conversation by the most cultivated people, while *slang* is intended to characterize such terms as have no proper place in cultivated language, altho not necessarily vulgar, but such as may perhaps be destined to attain reputable standing in the future.

If the living power of the English language is to be maintained it must continue to embrace the best that it can find in the common speech, as by natural processes it has done in the past. For these reasons slang words in considerable number will be found recorded in this work. Only that part of slang which is merely the expression of passing fancy or varying whim has not been included, because it is quickly displaced by that which is vigorous, expressive, and picturesque, and that alone is given place.

Variant forms are commonly placed directly after the ety-

mology (or, if they correspond only to a single meaning, directly after that meaning) and marked with a double dagger (‡) if they are living, otherwise with the usual mark for obsolescent forms (†). These forms include not only alternative spellings but also synonymous terms from different roots, as in the case of technical terms in which one of several names given to a thing has supplanted the others. Where variant forms are important, they are given also separate entry with a reference to the preferred form, but often, especially in the case of obsolescent and simple variations of spelling, entry as a variant is the only recognition given them. Where the variant form is of nearly the same importance as the preferred form, the two are braced together before the definition.

Words belonging rather to the past than to the present, such as obsolescent words, recently revived obsolescents, or affectedly old-fashioned forms, are designated as [Archaic]. In this work all terms are considered obsolete that have not been used by writers of authority since the year 1800. Obsolete words or senses are marked with a dagger (†). Such important words in the Bible and the Book of Common Prayer, however, as are no longer in use elsewhere have been marked [Archaic]. Words seldom used are marked [Rare].

A still broader characterization is made by printing many relatively unimportant words, with their definitions, in small type. In this class are included nearly all obsolescent and foreign words, and many rare, archaic, and technical terms, as well as phrases and compounds associated with a principal word.

Further features characteristic of this work are the giving in appropriate places, and only so far as it is permissible for the lexicographer so to do, certain fundamental rules, as of *grammatical and rhetorical construction*; rules correcting the common *errors of speech*; and rules governing the formation of the *plurals of nouns* and the correct *forms of address* used in writing.

Much help may be obtained from the plan followed of indicating the correct Prepositions to use in connection with other words.

The misuse of these little words is one of the most common errors, and one difficult to avoid; their correct use gives coherence, firmness, and compactness to style, and is an indispensable aid to lucidity. After many verbs, adjectives, etc., will be found a note, "followed by *by*," "followed by *in*," or the like. At the end of many synonym groups, also, appears a heading "Prep.," with examples indicating how various prepositions may be used in connection with the key-word of the group in different connections.

Such foreign phrases as the English-speaking person may find it essential or desirable to know are given place in a separate department (pp. 2781-2791). In this department the

specific aim is to give the reader a clue to foreign phrases that occur in English literature, law, and speech. Some foreign words and phrases the use of which is frequent in English, and the commoner Latin law terms used in English law, will be found explained in their proper alphabetical place in the main vocabulary of the dictionary. Wherever possible, foreign quotations have been traced to original sources. It must be borne in mind that many foreign phrases, in actual English quotation, have been wrested more or less from their proper original meaning, and that phrases, such as mottoes of institutions and of persons, have from time to time been constructed with little reference to pure classic usage. Therefore, persons who consult this department will, perhaps, need occasionally to remember that a phrase required may be entered in an alphabetic place not answering to that which the form of the phrase, as encountered by them in reading, would demand. Care was taken to conform to the best text accessible in each case.

## XI. CHRONOLOGICAL DATA.

In the effort to present an accurate statement of the dates of historic and other events, much time has been consumed by careful examination of authorities. Where these differ, as is not infrequently the case, that date has been accepted which seems to have the greater historical basis of truth. While it has been necessary to consult a great many works, especially in the search for the more obscure

data, the broad plan was followed of accepting as correct the leading authorities of each country in each department of chronology—biographical, bibliographical, historical, etc. Thus for men and women of note in American history the editors relied chiefly upon American publications; for those in British history upon works published in Great Britain and its colonies; for those in German history upon the encyclopedias of BROCKHAUS and MEYER; and so on throughout. For Biblical characters and events, the chronology of Archbishop USSHER was followed in part, but in the majority of cases no attempt was made to fix definitely such dates as are conceded by scholars to be beyond the possibility of exact historical computation. The dates in church history were obtained from such standard sources as *The New Schaff-Herzog Encyclopedia of Religious Knowledge*, *The Catholic Encyclopedia*, etc., and for those connected with secular history and its personages recourse was had to the best histories of the various countries concerned, as *The Jewish Encyclopedia*, the *Dictionary of National Biography*, *The Encyclopædia Britannica* (eleventh edition), and other equally authoritative works of reference.

With regard to the facts of ancient history it should be borne in mind that many dates prior to the commencement of the Christian era must be considered as only approximately correct. This is due

### Lack of Harmony in Ancient Chronological Systems.

on the one hand to the almost complete absence of reliable written records among primitive races and on the other to the complications incident to the peculiar methods of chronological computation obtaining among ancient peoples. These systems were almost invariably based upon some salient event, from the time of which all subsequent dates were reckoned. It is also true that in the case of many comparatively recent events the authorities often differ considerably. This is largely due to the changes made from time to time in the calendar, notably that made by Pope GREGORY XIII. in 1582, which, while adopted at once in Spain, Portugal, and parts of Italy, was not introduced in the Protestant states of Germany until 1700 or in Great Britain until 1750. This led to two different systems of dating, one ten or eleven days ahead of the other, which greatly increase the difficulty of fixing the time of many contemporary events.

Dr. ISAAC K. FUNK, the Editor-in-Chief, brought to the conception and completion of this revision the genius for comprehensive plan joined with marvelous mastery of detail—the wide, accurate, and various scholarship in union with the keen practical sagacity, alert to perceive the needs of busy men in the modern world—by which he was able originally to make the STANDARD DICTIONARY a work of such acknowledged worth and power. Not less important, perhaps, was the remarkable gift for organization that could select, from all parts of the world and from every field of human endeavor, scholars of highest rank and practical experts foremost in their several departments, and so coordinate the labors of these as to secure one great unity of final result. With advance of years his ripe experience and constant studious review of the original work had convinced him that the principles on which the STANDARD DICTIONARY had been made admitted of more extended application on the same broad basis of simplicity combined with accuracy. He recognized not less clearly that the rapid advance of the world in knowledge and achievement required the addition of what is new to what was of proved excellence in the old to make a dictionary that should represent the present, and not alone the past. This great undertaking, thus devised, he had practically completed before his death. The NEW STANDARD DICTIONARY, now completed, stands as the crowning work of his great life.

To the Managing Editor, Dr. FRANK H. VIZETELLY, who was closely associated with Dr. FUNK in his work for more than twenty years, too high tribute cannot be paid for the administrative ability, the critical discernment, the wide lexicographic knowledge, and the loyal and tireless industry with which he has conducted the work from beginning to end.

To Prof. CALVIN THOMAS, Consulting Editor, hearty thanks are due for valued assistance and wise counsel during the initiatory stages and also during the progress of this work.

ESPECIAL APPRECIATION of the practical assistance rendered by the various SECRETARIES and DEPARTMENTS OF THE UNITED

STATES GOVERNMENT is hereby acknowledged. Thanks are tendered particularly to the SECRETARY OF STATE and his DEPARTMENT; to the DEPARTMENT OF AGRICULTURE, including the DIVISION OF ENTOMOLOGY and its CHIEF, and the WEATHER BUREAU, its CHIEF, and LIBRARIAN; to the POST-OFFICE DEPARTMENT; to the DEPARTMENT OF COMMERCE AND LABOR; to the DEPARTMENT OF THE INTERIOR, including the UNITED STATES GEOLOGICAL SURVEY and its CHIEF; to the DEPARTMENT OF WAR and its SECRETARY; to the DEPARTMENT OF THE NAVY and its SECRETARY; to the SECRETARY OF THE TREASURY and his DEPARTMENT, especially to the DEPUTY CONTROLLER OF THE CURRENCY, to the BOARD OF UNITED STATES GENERAL APPRAISERS, and to the BUREAU OF THE MINT; to the UNITED STATES NATIONAL MUSEUM, SMITHSONIAN INSTITUTION, Washington, D. C.; and to the COLLECTOR and the OFFICERS of the UNITED STATES CUSTOM-HOUSE at the Port of New York.

THANKS are tendered to the OFFICERS of NEW YORK UNIVERSITY, the NEW YORK PUBLIC LIBRARY, COLUMBIA UNIVERSITY LIBRARY,

and the MERCANTILE LIBRARY; to the AMERICAN MUSEUM OF NATURAL HISTORY, the METROPOLITAN MUSEUM OF ART, the NEW YORK ZOOLOGICAL SOCIETY, and the BOTANICAL GARDENS, New York; to the COMMISSIONER OF POLICE and the POLICE DEPARTMENT of New York city; to the COMMISSIONER and CHIEF of the FIRE DEPARTMENT, New York city; and to the OFFICERS of the NEW YORK POST-OFFICE, for courteous assistance; also to a large number of other contributors and friends distributed over all the world, who rendered great help by voluntary contributions and suggestions.

THE FUNK & WAGNALLS NEW STANDARD DICTIONARY OF THE ENGLISH LANGUAGE, which with each successive revision is kept abreast of the times, is now offered to the public with the confident hope that the favor so liberally granted to the original work may be extended in even larger measure to this, with its many new elements of value and efficiency.

# SPELLING AND PRONUNCIATION.

## 1. The Standard of Pronunciation.

THE primary function of an English dictionary is to record the facts of usage as regards the form, the meaning, and the pronunciation of English words. The book must be first of all a record of fact, not of opinion, dogma, or personal taste. Language in every phase of it is ultimately a matter of conventional usage, and there is no higher court of appeal. But this does not mean that the dictionary has no concern with what ought to be, in contradistinction to what is. On the contrary, it must often pass judgment and give counsel, thus becoming an "authority." This is what the public expects and has a right to expect.

There are two reasons why the dictionary can not, if it would, evade the responsibility of passing judgment. In the first place, usage is infinitely various, so that the whole of it can not possibly be recorded. It varies with the time and place, with the culture and social status of the individual, with the speech-habit of the community. A selection of the usages to be recorded must inevitably be made, and selection involves a critical act. To include or to exclude is to pass judgment.

In the second place, change is the law of life for a spoken language, and usage is therefore never absolutely binding. We call it binding in proportion as it has endured for a long time and has been accepted by everybody. Thus arise the so-called laws of language—brief, summary statements of accepted usage. Whatever runs counter to those laws must be regarded, provisionally at least, as incorrect or bad; and it is the plain duty of the lexicographer to state the fact as it is. But all things are in a flux, and that which is bad to-day may become good to-morrow. A fashion may spring up in defiance of previous usage, of logic, even of common sense; if it prevails it is a part of the language, and must be recognized as such by the lexicographer. But when may a usage be said to have prevailed? After a decade, or a century, or five centuries? How large a following must it have to give it entire respectability? To such questions no precise answer is possible. The dictionary is a record of fashion, and fashion varies with the time and place. Hence the lexicographer can not, if he would, avoid passing judgment on the facts of usage.

The bearing of all this on the subject of pronunciation should be obvious. It is customary to say that the "standard" is the usage of the best speakers. But who are the best speakers? Are they the literary class of London, or of New York, the scholars of New England, the merchants of Liverpool or Chicago, the gentry of the South? Shall we keep in view the language of refined conversation, that of formal public discourse, that of the stage, or that of the pulpit? To such questions, again, there is no scientific answer possible—no answer that is not more or less the voice of habit and prejudice. The educated person who is conscious of a good upbringing is apt to assume that his own way of speaking is normal English, and that those who speak differently speak "brogue" or "dialect." But the truth is that we all speak dialect—the dialect of our social group. This is the condition by which we make ourselves easily understood and avoid seeming odd.

It may be that at some future time the English-speaking peoples will call an international orthoepic congress, with a view to discussing and compromising dialectal differences and agreeing on a convenient eclectic norm, which could then be taught in the schools by means of standard phonographs. The lexicographer would then have a real if more or less artificial "standard"; but until then the idea of a standard pronunciation must remain somewhat chimerical. In the last analysis it must mean some one's preference. But no one has been appointed supreme arbiter or given the right to speak with "authority" for the two hundred millions, more or less, who now use the English language.

Under such circumstances the dictionary will do its duty best by faithfully reflecting the facts of refined usage and describing the more important of the existing differences, without claiming superiority for the speech-habit of any particular locality or social group on either side of the ocean. We say "refined usage"; for in general slang and vulgar speech and provincial dialect must be left to special dictionaries cover-

ing those fields. On the other hand, the larger differences that characterize the speech of great masses of educated folk in different parts of the English-speaking world must be taken into consideration. This means that we must have an alphabet capable of recording the differences in question.

## 2. The Necessity of Respelling.

It is unfortunate that pronunciation can not be exactly shown by means of the English alphabet as ordinarily employed, but such is the fact. This is because we are in the habit of denoting different sounds by the same letter and the same sound by different letters. The conditions are such that, if several educated persons were to hear a word for the first time, they would probably spell it differently; and if they were to see a word for the first time they would pronounce it differently. If, then, we wish to avoid ambiguity it is necessary either to employ diacritical marks or else to respell the word with symbols that are unmistakable.

The earlier lexicographers resorted to diacritical marks—dots, curves, numbers, or other signs—placed over or under the letter; and this method is still largely in use. But it is unsatisfactory because so many marks are required. If our spelling were nearly phonetic; if, for example, the letter *a* had only the two sounds it has in *bat* and *bar*, it would be easy to mark the latter, say, as *ā*, and there would be no need of respelling, so far as that particular letter is concerned. But the letter *a* is used also for the vowels heard in *fate*, *fare*, *fall*, *fast*, and in the first syllable of *about*. This necessitates five more marks for *a*; and since the total number available in the printing-office is not very great, it becomes practically necessary to use the same marks over and over again, in connection with other vowel letters, to denote various groups of sounds. There must be a mark to show when a letter is silent, a mark to show whether a vowel is long or short; and there must be accent-marks. And so it will often happen that the same letter must have two or three diacritics.

All this leads to confusion. The marks offend the eye, they make trouble for writer, printer, and proof-reader, they get worn and broken in the process of printing. Worst of all, they fail to do the work for which they are designed, since they leave us, just as in the ordinary spelling, with many different symbols for the same sound.

It is therefore better to respell, and this is the method adopted in recent years by most of the dictionaries. That we should be thus obliged to respell words in order to show how they are pronounced is a pity and an absurdity, since the original and proper function of spelling is to do that very thing. The maker of a German, an Italian, a Spanish dictionary has rarely any need to respell a word in order to tell his own countrymen how the word is pronounced. But in English that necessity exists and must continue to exist as long as our so-called orthography continues on its present footing. Hence arises the problem of a scientific alphabet—something not at all identical with the question of spelling-reform. The more tenaciously we cling to our present orthographic habits, the greater the need of an accepted notation which can be used, as the ordinary spelling can not be used, to show unmistakably and with a fair degree of precision how English words are pronounced.

## 3. The Problem of a Scientific Alphabet.

By a scientific alphabet is meant, ideally speaking, an alphabet in which each letter denotes one sound only, and each sound is invariably denoted by the same letter. The latter principle is more important than the former. To use two letters for the same sound does no harm except to cumber the alphabet with a useless symbol and to force on the writer the necessity of choosing between them on other than phonetic grounds. On the other hand, to denote two or more sounds by the same symbol may mislead the reader, which is a far more serious matter. For instance, if it is understood that *c* and *s* always have the same sound before *e*, the reader knows that *cent* is phonetically the same

as *sent*; but if *c* may also have the sound of *k*, he can not tell whether *cell*, for instance, means *settle* or *kettle*.

The ideal of a scientific alphabet is easy to formulate but hard to realize; nor is its complete realization practically of great importance. The total number of speech sounds used by mankind is beyond computation: a universal scientific alphabet would contain so many symbols that no one could read or remember them. And even if one regards only the English language and its dialects, the number of sounds that can be distinguished by an expert phonetician is much greater than is popularly supposed. At a moderate estimate he would need a hundred symbols. But such an alphabet, while useful in phonetic science, would be worse than useless in a dictionary for everybody. What is needed there is a golden mean between the expert's too many and the Latin alphabet's too few. Just as the housekeeper would be hindered rather than helped by a clock marking fractions of a second, so the average user of a dictionary is best served by a phonetic notation confined to what may be called the principal sounds of the language—those which can be discriminated by everybody who is willing to give a little attention to the subject—it being duly recognized that each symbol denotes not an invariable physical fact, but a type of sound that varies more or less within narrow limits. Thus the *n* of *tin* is not exactly the same as the *n* of *inch*, and the *t* of *bat* is slightly different from the *t* of *battle*; nevertheless, we can get along very well, even in an alphabet calling itself scientific, with one *t* and one *n*. What the "principal sounds" are, and how many symbols are therefore needed, is a question of some difficulty, about which there is room for a difference of opinion. It is a question to be answered by scientific analysis tempered by considerations of practical utility.

The prime requisites of a good notation are that it be easy to learn, easy to read, and easy to remember. This means that the familiar Roman letters are preferable to alphabetic characters such as those of Bell's "Visible Speech," which are eminently scientific but hard to learn and easy to forget. Minor requisites of a more esthetic nature are that the symbols be typographically congruous, *i. e.*, taken from the same type-font, without intermixture of Latin and non-Latin letters, or upper- and lower-case, or roman and italic forms. Diacritical marks should be as few as possible. Diphthongs should be denoted by their proper component parts; and if, for the reader's convenience, two letters are used for a simple sound, as *sh* for the consonant in *shy*, the two letters should be tied (*sh*) to show that the sound is not composite. Finally, it is better to use the fundamental vowel letters with their original Latin values. This brings the notation into accord with international phonetic science and makes it a help rather than a hindrance in the study of Latin, French, German, Spanish, and Italian. It is really quite impossible to devise a satisfactory scientific notation if the diphthong which we miscall "long *i*" is to be denoted by *i* and a different short sound by *i*. The two sounds do not stand to each other in the relation of "long" and "short" any more than do the *a*'s of *fat* and *fate*, or the *e*'s of *evil* and *devil*.

#### 4. The Scientific Alphabet of 1877.

In the year 1877 the American Philological Association agreed on a notation which, with some slight modifications, was used in the first edition of this Dictionary and has often been referred to as the "scientific alphabet." The salient features of this notation were the use of the vowel forms *a*, *e*, *i*, *o*, *u* in their Latin values and the proposal of the three new letters *ā*, *ō*, *ū*. Thus the complete vowel-scheme consisted of the letters *a*, *a*, *e*, *i*, *o*, *e*, *u*, *ū*, which, when used without a mark of quantity, were to denote the sounds heard in *artistic*, *bat*, *pen*, *pin*, *poetic*, *not* (as pronounced with slight rounding), *full*, *but*. The corresponding long vowels, as heard in *art*, *bare*, *day*, *marine*, *note*, *north*, *fool*, *burn*, were to be marked if necessary with a sign of length.

The eminent scholars who devised this scheme hoped that the new vowels would gradually win their way into ordinary print. Just as, a few centuries ago, the public had accustomed itself to the useful differentiation of *u* and *v*, *i* and *j*, might not the public of the nineteenth century accustom itself to the no less useful differentiation of *a* and *ā*, *o* and *ō*, *u* and *ū*? If this were to happen there would, of course, be a period of transition during which the new letters would be gradually gaining ground in public favor in the face of more or less opposition. To disarm this opposition, and facilitate the popular acceptance of the new way of spelling, it was deemed expedient not to insist on the strict ideal of a scientific alphabet, but to compromise somewhat freely

with the ordinary spelling. So the letter *c* was kept, but always with the sound of *k*. At the same time *k* was not rejected, and *q* and *x* were admitted as alternatives. Thus one might spell *quit*, *cwit*, or *kwit*; *fox*, *focs*, or *foks*. The digraphs *th*, *sh*, and *ng* were retained for the simple sounds heard in *thin*, *ship*, *sing*, and *dh* and *zh* were recommended for the simple sounds heard in *this* and *azure*. For the *ch* of *chin* and the *j* of *jaw* the familiar *ch* and *j* were retained.

#### 5. The Revised Scientific Alphabet.

It has been seen how, in the alphabet of 1877, scientific rigor was in some degree sacrificed to the hope of popular acceptance. But this hope was not fulfilled to a justifiable extent. In the course of time the question of a better notation—one somewhat more in accord with the new science of phonetics—began to be mooted among educationists. In the summer of 1903, on the initiative of the Department of Superintendence of the National Education Association, a conference was called at Boston for the purpose of taking steps toward the adoption of a phonetic alphabet of medium precision, such as could be used in the elementary teaching of phonetics, and also in dictionaries and text-books where words are respelled for pronunciation. It was thought, naturally enough, that this double benefit could be got by this one effort; and that, if the experts could agree on a particular notation as on the whole the best, and if then the public could be induced to accept it, such a standard phonetic alphabet would have some very important educational uses in quickening the phonetic sense of our people.

The Boston conference, which comprised delegates from the Department of Superintendence of the National Education Association, the American Philological Association, and the Modern Language Association of America, quickly agreed that the alphabet of 1877 was excellent in its main features, but needed some revision in matters of detail. A joint committee of five was accordingly appointed, with instruction to consider the whole subject carefully and if possible to bring about an agreement of the experts on a phonetic alphabet, based on the alphabet of 1877. In 1904 this joint committee published an elaborate report, in which the entire problem was carefully traversed and an alphabet was submitted as a basis of agreement. The report of the joint committee, which was acceptable to the National Education Association Committee, was then sent to the two philological societies, which appointed committees of revision to investigate and report. The entire matter was then studied afresh by the two committees of revision, and the result of their labors was a second printed report, which in the main indorsed the report of the joint committee, but proposed certain amendments in identical form. This second report, with the amendments, was formally adopted by the two philological societies in 1905. We shall refer to it as the A. P. (American Philologists') alphabet. The A. P. alphabet, as finally adopted, was not altogether satisfactory to the Committee of the Department of Superintendence of the National Education Association, which committee accordingly submitted to the National Education Association at its meeting at Boston, July, 1910, an alphabet that seemed to it better adapted to educational needs. The Association ordered this alphabet printed and distributed among its members, and that it be submitted to the Department of Superintendence at its next meeting. It was so submitted at the meeting of the Department at Mobile, Ala., February 24, 1911, which body approved and adopted it. This is the alphabet employed in Key 1 of this Dictionary. We shall refer to it as the N. E. A. alphabet. The points in which it differs from the A. P. alphabet are as follows:

(1) *The notation of the a sounds.*—For the five sounds heard in *bat*, *bare*, *artistic*, *art*, *ask*, the A. P. alphabet has, respectively, the symbols *ā*, *ā*, *ā*, *ā*, *ā*, whereas Key 1 employs *a*, *ā*, *ā*, *ā*, *ā*. The crux here lies in the selection of the best symbol for the vowel of *bat*, since, with that question settled, the other symbols follow almost as a matter of course. The ligature *æ* is employed for the sound in the alphabet of the International Phonetic Association, and hence, quite generally, in the literature of phonetic science. It is used in the great Oxford Dictionary. This is obviously a strong point in its favor, and it must be admitted that, for the purposes of an international alphabet, *æ* is the best symbol. The sound hardly occurs in French, German, Italian, or Spanish; it is thus quite natural that Continental phoneticians should prefer to use the ordinary print form *a* for their own ordinary *a* sound, and to denote the peculiar high English vowel by the Anglo-Saxon ligature *æ*.

But in an English dictionary such a notation has its inconveniences: It necessitates the virtual disuse of the familiar *a* (the sound of *a* in *artistic* being extremely rare in English), and the use of the ligature in an immense number of very common words ordinarily spelled with *a*. Such respellings as *kæt* for *cat* and *hænd* for *hand* seem to the ordinary reader to make a simple matter difficult.

This being so, and also because the upright italic *ā* (with a macron as sign of length) has from the first been used in this Dictionary for the so-called Italian *a* and is now familiar to a multitude of readers in that value, and because, finally, it is deemed desirable that the form *a* should come into use in ordinary print for the sound in question (there being no likelihood that the public will take up with the Anglo-Saxon *æ* for the vowel of *bat*), the old notation for the *a* sounds has been retained, with the exception that *α* is used for the shortened *ā* as heard in *artistic*, but not for the final vowel of *sofa*, and with the addition of *ä* for the vowel that varies between *a* and *ā*. The use of these, as of all other symbols, will be explained below.

(2) *The y of yet and the j of jet.*—These two hang together. For the former the A. P. alphabet has *j*, for the latter *dʒ*, while Key 1 employs *y* and *j* respectively. Here again, from the point of view of international phonetic science, the former is the better notation; but for an eye accustomed only to the English language the latter is the more natural.

(3) *The sh of ship and the ch of chip.*—For the former the A. P. alphabet has *ʃ*, for the latter *tʃ*; Key 1 employs *sh* and *ch* respectively. This is again simply a concession to English visual habit.

(4) *The th sounds.*—For the *th* of *thin* the A. P. alphabet has *þ*, for the *th* of *this* *ð*; Key 1 employs *th* and *th*—another concession to English visual habit.

(5) *Syllabic l, m, n, r.*—For these the A. P. alphabet has *ˈl*, *ˈm*, *ˈn*, *ˈr*, spelling *battle*, *bottom*, *fasten*, *sinner* as *bætˈl*, *hətˈm*, *fæsˈn*, *sɪnˈr*. Omission of the apostrophe involves ignoring the very audible difference between the *l* of *battle* and the *l* of *battling*, for which a sign is really needed. But the apostrophe, which naturally suggests something omitted, is not a good sign for the purpose and might lead to confusion when used in connection with accent-marks, as in *batˈl*, *tɪˈkɛtˈl*.

From what has been said it will be evident that the N. E. A. Alphabet, intended as it is for the general public, is sufficiently precise for all practical purposes, but occasionally sacrifices the extreme of precision to simplicity and distinctness. Just what this means will appear from the detailed explanation of the symbols in § 8 below. In this Dictionary, the syllable which has the principal stress is marked by an acute accent (ˈ) after it. Syllables that have less stress than the primary are marked with a secondary accent (ˈˈ).

## 6. The Symbols for the Unstressed Vowels.

It is one of the deeply ingrained characteristics of the English language that unstressed vowels are more or less "obscured" in the utterance. This is especially the case in the syllable just before or just after the primary accent. Thus the middle syllable of *monarchy*, *misery*, *primary*, *murmuring*, *martyrdom* is pronounced by most speakers with the same vowel. This vowel Key 1 denotes by the letter *ə*. It is a mistake to regard the "obscuration" of unstressed vowels as due to slovenly pronunciation or colloquial weakening. The phenomenon is a law of the language, and belongs not only to familiar talk, but also to the most formal and deliberate speech. There are, indeed, certain endings, such as *-ment* and *-tor*, which are more apt to have the *ə* in talk than in formal utterance; but these are exceptional cases. Speaking broadly, the "obscuration" of an unstressed vowel is just as much a part of the language as are its laws of grammar. One who should attempt to read a passage, it matters not whether lofty or colloquial, and to sound all the unstressed vowels "distinctly," *i. e.*, as they would be sounded in stressed syllables, would at once be set down as a person unacquainted with the English language.

Nor can we rightly say that the so-called obscuration is a matter of shortening, or of "variation" between two different types of stressed vowel. No amount of shortening of the *e* in *very* will produce the *e* in *misery*; the latter is a different vowel. Nor can we say that the *e* of *misery* is a vowel which "varies" between the *e* of *very* and the *u* of *but*. It does not vary at all, but is as uniform as any vowel in the language. Never does it sound like the *e* in *very* or the *u* in *but*. In short, it is a vowel *sui generis*, and as such should have a symbol in

any scientific alphabet. There are, indeed, cases in which some speakers avoid and disapprove the *ə* sound which the many pronounce; thus, some make a point of saying *rek'ərd* instead of *rek'ərd*. But if there are such differences of usage and opinion, a symbol is needed by which they can be clearly indicated to the eye. To have and use a letter capable of showing how one *does* pronounce has nothing to do with the question how one *should* pronounce. Phonetics is a matter of science; orthoepy, a matter of taste, depending on instruction or habit.

It is true that if there were but one unstressed vowel in English there would be no need of a letter for it, however variously the usual spelling might denote it. But there are several; and one in particular appears in such a variety of spellings that it is best to have a letter for that also. This is the vowel heard in the last syllable of *habit*, *candid*, and in the first syllable of *renew*. It is a little nearer to the *i* of *sit* than to any other accented vowel, but almost as near to the vowel of *set*. One must remember that in passing from the *e* of *set* to the *i* of *sit* the forward movement of the tongue is very slight—only the minute fraction of an inch. If then the *i* in *sit* is uttered with a weak action of the tongue, such as regularly goes with an unstressed vowel, the result is slightly to "lower" the *i* toward *e*. Thus, one gets a vowel which is neither *i* nor *e*, but between the two and readily identifiable with either. One can easily imagine that one pronounces *habit* with an *i* and *valley* with an *e*; but it is not really so. It is the nature of this vowel, as also of *ə*, to be unstressed. If it be stressed ever so little, to show its kinship with some "distinct" vowel, its character is destroyed.

If the second vowel of *habit* were always written *i*, one could dispense with a special symbol for it and ignore the difference between the *i* of *bit* and the *i* of *habit*. Again, if the vowel in question were always written *e*, as it is in the first syllable in *renew*, *depress*, etc., one could get along with *e*. But one does not like to write *valley* as *vale*, or *city* as *cite*; nor does one wish to respell *palace*, *agate*, *average*, as *pales*, *aget*, *averej*, or *captain* as *kaptēn*, when it is stated expressly that *e* has the sound of *e* in *met*. It is sometimes best to keep a had notation to which everybody is accustomed; but to change from a bad one that is familiar to another bad one that is new is indefensible.

Since the vowel under consideration is really a half-fledged or imperfectly formed *i*, it may very well be denoted by an *i* without the dot. Preference is given to that symbol instead of to the dotless *i* with a breve, suggested in the A. P. alphabet.

Aside from *ə* and *i*, there are no unstressed vowels that seem to require special symbols. See §§ 7, 8, and 9 under *o*, *e*, and *u*.

## 7. The Marking of the Quantity of Vowels.

By the quantity of a vowel is meant, properly speaking, the relative amount of time taken in uttering it. It is necessary to say the "relative" time, since no absolute unit of measurement is practicable. The tempo of speech varies greatly. Some persons habitually speak more rapidly than others, and the same person uses a different tempo according to the occasion or the state of his feelings. Vowels may be prolonged in singing, in calling, for emphasis, or under the varying influence of the sentence-accent. It is thus impossible to fix a unit of length with mathematical accuracy, but every one can perceive gradations of relative length. A close observer may grade vowels as very long, long, medium, short, and very short. Almost any one, with a little attention to the subject, may hear the three grades, long, medium, and short. For ordinary purposes, however, it suffices to distinguish graphically only the two grades, long and short. This is what our conventional spelling undertakes to do, but with very indifferent success.

The usual way of denoting a long vowel, in the conventional spelling, is by means of a biliteral symbol, like the *oa* of *soap*, the *oo* of *door*, the *ou* of *pour*, the *o* + consonant + silent *e* of *note*—all for long *o*. The device for showing that a vowel is short is to double the following consonant, as in *bitter*, *dapper*, *juggle*. Neither of these methods, however, has been applied systematically; many biliteral symbols may denote a short sound, like the *ay* of *says*, the *oe* of *does*, the *eo* of *leopard*, the *ea* of *head*, and very frequently, as in *epic*, *tonic*, *river*, the consonant is not doubled after a short vowel. In a scientific alphabet neither of these methods is acceptable, since every symbol ought to be self-contained, *i. e.*, to show in itself what it stands for without depending on anything else. There is but one *t* in *bitter*: to write two, for the purpose of distinguishing the word from *biter*, is

quite wrong, since the difference between the two words resides in the vowel, not in the consonant.

Another difficulty begotten of our conventional spelling and the confused terminology that has grown up in connection with it is that notions of quantity have come to be mixed up in the general mind with notions of quality. Thus one hears of the "long a" of *paste* and the "short a" of *past*, when both vowels are long. The vowel of *met* is called "short e" and that of *mete* "long e"; but the real long of the e in *met*, while common in some other languages, is little used in English, tho one may hear it at least half-long when it is followed by a voiced consonant in an accented syllable, as in *beg*, *says*, *blend*. So, too, the real short of the e in *mete* is very rare in English, tho it may be heard in the first syllable of *Eolian*. What is called "long u" is generally a diphthong having no quantitative relation whatever to the so-called "short u" of *but*. In brief, the words "long" and "short," as popularly used to define vowel-quantity, are meaningless and misleading.

Now, in any phonetic notation that aims at a high degree of precision it is important to have a sign of length that means prolongation and nothing else. To carry out that principle strictly, however, would require several symbols more than appear in the N. E. A. alphabet. Most of the vowels are either open or close, and each variety may be long or short. Thus, taking the historical e sounds for illustration, one would need to distinguish the open short in *met*, the open long in *blend*, the close long in *they*, and the close short in the first syllable of *aerial*. But such refinements would be more bewildering than helpful to the general reader. Therefore, this alphabet ignores the open long e of *blend*, which always takes care of itself in pronunciation, and also the close short in *aerial*, which is of rare occurrence. Thus only two signs are used for the e sounds: e for the open short, and ē for the close long. This means, however, that the macron, which is primarily a sign of simple length, usually connotes also a slight difference of quality. Thus, *magnate* is respelled as mag'nēt, tho the e is not really long—not much, if any, longer than the stressed e of *magnetic* (mag-net'ik).

Similar compromises are made in a few other cases—always for the sake of simplicity and on the general theory that, in a notation for popular use, a very little imprecision is better than a great deal of bewilderment. For details, see the following section.

## 8. The Symbols and the Sounds They Denote.

For the purpose of explaining how the symbols of the N. E. A. alphabet are used in Key 1 of this Dictionary, and how their use is related to the more important variations of English pronunciation, these symbols are now considered. As to the mode of production of the various sounds by the organs of speech, and the technical names they bear in phonetic science, the reader is referred to the Dictionary itself under the letters A, B, C, etc.

### A. Vowels and Diphthongs.

The symbols are: a, ā, α, ā, α, e, ē, i, ī, o, ō, ē, u, ū, ū, ə, ai, au, ei, iu, iū.

#### (1) a and ā.

These denote the vowel heard short in *bat*, *cap*, *lack*, and long in *bare*, *fair*, *pear*, *heir*. Many speakers, especially in England, pronounce the vowel of *bear*, *fare*, etc. (ā before r), a little higher than that of *bat*, so that it sounds very much like the prolongation of the e in *met*, *very*. It is further to be noted that a is regularly prolonged before a voiced consonant in monosyllables, especially if they bear the sentence-accent. Thus in *stand*, *villain*, *stand!* the vowel of *stand* is long, while in *standing* it is half-long, and in *instand* it is short. Note the similar difference in *mankind* (a), *every man* (a), *behold the man* (ā)! and in *has* (a) *he come?* *he has* (ā). Strict accuracy would thus require that the pronunciation of *has* be given as haz or hāz, according as the word is used. It is also often heard as hēz or ēz. In such cases a is used as representing the normal vowel, and the variants due to increase or decrease of stress are ignored.

#### (2) α and ā.

This vowel occurs chiefly before r; thus, α in *artistic*, *cartoon*, and ā in *art*, *hard*, *garden*, *calm*, *alms*, *father*. Most often the unstressed

or becomes ar, as in *separate*, *monarchy*, *partake*. There is some variation in the length of ā; thus, it is longer in *mart* than in *martyr*, longer in *garden* than in *garler*. These slight variations are ignored in respelling, ā being used wherever the vowel is notably longer than in *artistic*. In American English the so-called "short o" of *hot*, *not*, *poppy*, *rotten* has for the most part lost its rounding, so that these words are pronounced hat, nat, papı, ratn. In all such cases e is used and the variant with α is ignored.

#### (3) a.

This letter is used for a vowel which varies between a and α, or between ā and ā. It occurs before f, s, th, sometimes before n + consonant. Examples: *ask*, *glass*, *past*, *basket*, *laugh*, *after*, *quaff*, *bath*, *path*, *aunt*, *lancet*, *dance*, *France*. The prevailing vowel in the south of England is ā, in the United States ā. The ancestor of both sounds is ultimately a, which rose to a in very early times and then, in the seventeenth century, became ā before a voiceless fricative, and sometimes before n + consonant. Thus the words which had been ask, path, became āsk, pāth. In the eighteenth century the tendency set in, in the south of England, to convert this ā into ā, but conservatives resisted and clung to the old ā. Gradually ā prevailed in London, and then the idea took root that pās was vulgar and pās affected. So refined speakers made a virtue of pronouncing an intermediate vowel, higher than ā but not so high as ā. It is this "refined transition," as it has been called, that is denoted by a. It is generally long, but may be short in unstressed syllables, as *wine-glass*, *cow-path*, or half-long in words of more than one syllable, as *basket*, *pastime*. The symbol a is used not to express a preference for the intermediate sound as more correct or more elegant, but simply as a short way of indicating that the pronunciation varies. Thus the respelling bāth means that the word is either bāth or bāth or between the two.

#### (4) e and ē.

As above stated in § 7, ē is closer as well as longer than e. Usually e stands for the open short vowel of *met*, ē for the close long of *may*. But e is employed also for the open sound when lengthened before a voiced consonant in emphatic monosyllables, as in *beg*, *blend*, *says*; and ē for the close sound when shortened in an unstressed syllable, as in *magnate*, *aerial*, *always*. So, too, in French and Spanish words, ē is used for the close short vowel of an unstressed syllable; thus, *Médoc*, *León*, are respelled mē-dok', lē-ōn'.

Many speakers, both in England and the United States, make ē a diphthong, the first element being a little higher than e, the second a little lower than i. Such familiar spellings as *veil*, *skein*, *rein* are a fairly exact rendering of this pronunciation. But as the final element is apt to be very faint, and the first element is a little closer than the e of *met*, it was deemed best to denote the sound by ē rather than by ei.

Examples of e: *set*, *ten*, *well*, *wealth*, *said*, *says*, *leopard*, *heifer*, *very*, *merry*, *bury*, *confess*; *oulet*.

Examples of ē: *bay*, *bail*, *they*, *veil*, *gate*, *great*, *taste*, *savior*, *danger*, *aorta*, *magnate*.

#### (5) i and ī.

Usually i denotes the open short vowel of *sit*, ī the close long of *seat*. But i is also used for the open sound when prolonged in emphatic monosyllables before a voiced consonant, as in *bid*, *big*, *sinned*; and ī for the close sound when shortened in an unstressed syllable, as in *Eolian*, *athlete*.

Examples of i: *bit*, *bid*, *fill*, *busy*, *hymn*, *build*, *spirit*, *delirious*, *misfit*.

Examples of ī: *marine*, *lean*, *piece*, *seen*, *scene*, *Cæsar*, *Peter*, *people*, *fear*, *belief*, *receipt*, *athlete*, *regent*, *Socrates*.

#### (6) i.

See above, § 6. This sound results from the weakening of a high front vowel when unsupported by the stress. It occurs in obscure syllables having i, y, e, or a in the regular spelling, as in *ability*, *city*, *Sunday*, *visible*, *difficult*, *renew*, *debate*, *palace*, which are respelled as ə-bil'ı-tı, sit'ı, sun'dı, viz'ı-bl, dif'ı-kult, ri-niū', di-bet', pal'ıs.

An unstressed medial i in words of Latin origin is apt to vary in pronunciation between ı and ə; thus, *visible*, *difficult*, *agitate* are heard now as viz'ı-bl, dif'ı-kult, aj'ı-tēt, and now as viz'ə-bl, dif'ə-kult, aj'ə-tēt. Careful speakers prefer the former pronunciation, which accordingly is the one given in the Dictionary; but the other, altho unapproved, is very common in ordinary conversation.

Certain combinations of consonants tend to prevent *i* from becoming *ɪ*; thus the ending *-ism* is always *-izm*, never *-iz̩m*. The ending *-ist*, when immediately following the primary stress, as in *typist*, is frequently *-ist̩*; in the second remove, as in *fabulist*, *Darwinist*, the *i* is more distinctly pronounced.

#### (7) o and ɒ.

The short sound occurs only in unstressed syllables, as in *podic*, *elbow*. Except when final, and especially before *r*, it is apt to become *ə*; thus, *original*, *agony*, *history* are often heard as *ə-rij'i-nəl*, *ag'ə-ni*, *his'tə-ri*. In such cases, however, careful speakers still pronounce *o-rij'i-nəl*, *ag'o-ni*, *his'to-ri*. In New England dialect *o*, instead of the usual *ɒ*, is sometimes heard in *coat*, *road*, *stone*. The long sound is often diphthongal, in the south of England regularly so. The first element of the diphthong is a little less rounded than *o*, being virtually identical with *e*. This is then further rounded during the act of utterance and ends in the labial semivowel. Such familiar spellings as *shoulder*, *know*, represent this pronunciation.

Examples of *o*: *rotation*, *Bohemian*, *hero*, *shadow*, *potato*, *balcony*, *dissonant*.

Examples of *ɒ*: *boat*, *note*, *goes*, *pour*, *door*, *ford*, *motion*, *devote*.

#### (8) e and ɛ.

The vowel *e* differs from *o* in being less rounded, more open. It is heard short in *autum'nal*, long in *au'tumn*. *Or*, *for*, *nor*, etc., have *ɛ* when emphatic; when unemphatic, either *e* or, more commonly, *ə*. What is popularly called "short *o*," the vowel of *hot*, *not*, *pop*, etc., is historically the more open, slightly rounded vowel *e*, and is still so pronounced in England. In the United States, however, the *e* has for the most part completely lost its rounding, so that *hot*, *not*, *pop* are usually heard as *hat*, *nat*, *pap*. In southern English *ɒ* and *ɛ* are not usually distinguished before *r*, but come together in a vowel which is between the two: thus, *mourning* and *morning* are pronounced alike. So, too, the vowel of *story*, which we denote by *ō*, is in southern English half-way between *ɒ* and *ɛ*.

Examples of *e*: *august'*, *hol*, *cod*, *bog*, *stolid*, *begot*.

Examples of *ɛ*: *Au'gust*, *author*, *north*, *Paul*, *awl*, *call*, *bought*, *caught*, *lost*, *off*, *moss*, *cloth*.

#### (9) u and ū

Here again, as in the case of *e* and *ɛ*, *i* and *ɪ*, there is a difference of quality as well as of quantity, *ū* as in *pool* being a little more rounded than *u* as in *pull*. In the interest of simplicity *u* is used both for the stressed vowel of *pull* and for the unstressed vowel of *value* (*val'yū*), tho they are not exactly identical. The *u* of the ending *-ture* varies between *ə*, *u*, and *iū*, *nature* being heard as *nə'tʃər* or *nē'tʃur*, and *literature* as *lit'ər-ə-tʃūr* or *lit'ər-ə-tiūr*, or sometimes *lit'ər-ə-tʃur* or *lit'ər-ə-tʃə(r)*.

Examples of *u*: *push*, *pull*, *handful*, *could*, *hood*, *manhood*, *issue*.

Examples of *ū*: *rule*, *rude*, *blue*, *iute* (see below, under *iū*), *pool*, *mood*, *balloon*, *ghoul*, *soup*, *détour*.

#### (10) v and ū.

The symbol *v* denotes the so-called "short *u*" of *but*, which is much more common than *u*. It is apt to be prolonged before a voiced consonant in emphatic monosyllables, as in *buzz*, *fund*. But this long *v*, which easily takes care of itself, is left without a symbol, *ū* being used for a vowel of slightly different quality, heard only before *r*. In the ordinary spelling *ū* is denoted in a variety of ways.

Examples of *v*: *but*, *cud*, *buzz*, *fund*, *gunned*, *insult*, *blood*, *rough*.

Examples of *ū*: *burn*, *learn*, *fern*, *urn*, *girl*, *whorl*, *return*, *concern*.

#### (11) ə.

The symbol *ə* may be called the low unstressed vowel, *ɪ* being the high. The position of the tongue in uttering it is nearly the same as for *u*, but the difference between *ə* and *u* is clearly audible in such pairs as *sup*, *hyssop*; *luck*, *hillock*; *sum*, *winsome*. Almost any vowel, especially any low vowel, tends to become *ə* when unsupported by the stress. The tendency toward *ə* is stronger in southern English than in northern. In the United States there is a difference of usage in the pronunciation of certain endings, notably *-or*, *-tor*, and *-ment*, *ə* or *e* being heard in formal utterance, *ə* in ordinary talk. Thus, *senat-*

*or*, *monument*, *president* are ordinarily *sen'ə-tər*, *mən'yū-mənt*, *prez'i-dənt*, but in more formal utterance *sen'ə-ter*, *mən'yū-ment*, *prez'i-dent*. The great majority of the common unstressed endings have *ə*, with little or no variation of usage. Compare *urban*, *gallant*, *balance*, *potence*, *potent*, *quotient*, *farmer*, *famous*, *portion*, *righteous*, *faction*, *crocus*, *kingdom*. The unstressed prefixes *ad-* (*ac-*, *af-*, *al-*, *an-*, *as-*), *ob-* (*oc-*, *of-*, *op-*), *con-* (*col-*, *com-*, *cor-*), *sub-* (*suc-*, *sup-*, *sur-*, *sus-*) often have *ə* in common speech, but the distinct vowel is heard in more formal or precise utterance, altho much shortened.

#### (12) ai and au.

The symbol *ai* is used for the diphthong commonly called "long *i*," and *au* for that heard in *now*. In both symbols the first element varies somewhat. In parts of the United States *house* is not pronounced *haus*, but *haus*, or even *heus*, but *au* may be regarded as normal.

Examples of *ai*: *aisle*, *kaiser*, *rile*, *right*, *ibex*, *sleight*, *cry*, *die*, *dye*.

Examples of *au*: *sauerkraut*, *now*, *thou*, *bough*.

#### (13) ei.

The symbol *ei* is used for the diphthong heard in *avoid*, *choice*, *noise*, *hoist*, *alloy*, *boy*, *toy*.

#### (14) iu and iū.

What is popularly called "long *u*," as in *tube*, is denoted by *iū*, and *iu* is used for the same sound when shortened in an unstressed syllable, as in *mutation*. In southern English regularly, and to some extent in the United States, the sound is a diphthong consisting of a fully rounded *ū* as in *pool*, preceded by the palatal semivowel. This pronunciation would properly be denoted by *yū*; thus, for *tube*, *Tuesday*, we should have *tyūb*, *tyūz'di*, rather than *tiūb*, *tiūz'di*. But many speakers, probably the majority of Americans, pronounce *tube* and *Tuesday* without the palatal semivowel and with a *u*-sound slightly less rounded than the *ū* of *pool*. This pronunciation is not well represented either by *tyūb*, *tyūz'di*, or by *tūb*, *tūz'di*. It is this *u*-sound, which may or may not be diphthongal, that is denoted by *iū*. To a certain extent this sound is heard even after *r* and *l*, where no *y* is pronounced. Thus *lute* (*liūt*) is distinguished from *loot* (*lūt*).

Examples of *iu*: *curator*, *duration*, *mulatto*, *superior*.

Examples of *iū*: *cute*, *dew*, *few*, *feud*, *suit*, *lure*, *mutual*.

### B. Consonants and Semivowels.

The symbols are: *b*, *d*, *f*, *g*, *ŋ*, *h*, *j*, *ch*, *k*, *l*, *m*, *n*, *p*, *r*, *s*, *sh*, *t*, *th*, *th*, *v*, *w*, *y*, *z*, *g*. Of these, *b*, *d*, *f*, *h*, *k*, *p*, *t*, *v*, *z* have the familiar and unmistakable sounds heard in *be*, *do*, *fee*, *he*, *key*, *pea*, *tea*, *vow*, *zest*; *g* sounds always as in *get*, never as in *gem*, and *s* always as in *sit*, never as in *rose* or in *sugar*. These eleven letters, then, require no further explanation.

#### (1) ŋ.

This denotes the guttural nasal heard in *sing*, *singer*. It is a simple sound, not a compound of *n* and *g*. The *ng* of *finger* is composed of *ŋ* + *g* (*fiŋ'gər*), the *nk* of *bank* of *ŋ* + *k* (*baŋk*).

#### (2) ch and j.

These denote, respectively, the composite consonants heard voiceless in *chew* and voiced in *jaw*. Phoneticians analyze the former as consisting of *t* + *sh*, the latter as consisting of *d* + *g*. The presence of a *t* and *d* is recognized by the ordinary spelling in such words as *batch*, *badge*. It is to be observed, however, that *ch* does not consist of a complete *t* as in *tin* followed by a complete *sh* as in *ship*, but rather of a variety of *t* followed by a variety of *sh*. The elements blend in such a way that each loses a part of its phonetic character, and the result is virtually a simple sound. In the sentence *that shall never be*, no matter how rapidly one may speak it, the words *that shall* never make an exact rime to *satchel*, as they would do if *ch* were exactly *t* + *sh*. A similar statement would hold of the equation *j* = *d* + *g*. It is this consideration which justifies the retention of the familiar symbols, in lieu of *tsh* and *dg*, for these sounds.

#### (3) l, m, n, r.

Both the initial sound of *let*, *met*, *net*, *red*, and the final sound of *able*, *prism*, *fasten*, *flour*, are denoted by these letters respectively. The final sounds are called syllabic *l*, *m*, *n*, *r*, it being a peculiarity of these open consonants that they may partake of the nature of a vowel and form

a syllable. Phoneticians usually distinguish syllabic *l*, *m*, *n*, *r* by a diacritic mark and are thus enabled to show the difference between the *l* of *battle* and that of *batling*; the *m* of *prism* and that of *prismatic*; the *n* of *lighten* and that of *lightning*; the *r* of *center* and that of *central*. As noted above in § 5, the alphabet employed in Key 1 ignores this difference. In most cases syllabic *l*, *m*, *n*, *r* derive from an ordinary *l*, *m*, *n*, *r* preceded by an unstressed vowel which first became *ə* and was then still further reduced to the slight vocalic resonance peculiar to the consonant itself; thus *little* was formerly *litel*, pronounced lit'el, then lit'əl, finally lit'l. In the case of many words in *-al*, *-el*, *-an*, *-en*, etc., there is a difference of pronunciation: thus some pronounce *metal*, *pedal*, *idol* as met'əl, ped'əl, ai'dəl, while others do not distinguish these words from *mettle*, *peddle*, *idle*. On account of this divergent utterance it is often hard to say what the prevailing usage is—whether *-əl*, *-əm*, *-ən*, or simply syllabic *l*, *m*, *n*; but the tendency is toward the latter. One hears ped'ənt and ped'nt, ūrbən and ūrbn, etc. In the ordinary spelling syllabic *m* appears as simple *m* in *-ism*, *chasm*, *prism*, and some other words, but as *-am* in *madam*, *Adams*, as *-om* in *bottom*, etc. Syllabic *r* appears as *r* sometimes after a long vowel or diphthong, as in *flour*, but after a consonant always as *-ar*, *-er*, *-or*, etc. Such words are respelled *-ar*, as riv'ar, mūr'tar, not riv'r, mūr'tr, etc. On variant pronunciations of this letter, see under *R* in the Dictionary.

#### (4) sh and z.

These are the signs employed, respectively, for the voiceless and voiced palatal sibilant heard in *ship*, *azure*. On the analogy of *sh* a tied *zh* might seem to be the logical symbol for the voiced sound, but, unlike *sh*, *zh* has no currency in English spelling. As this latter is a simple sound, it has been thought better to introduce the simple letter *z* to represent it, rather than to introduce an unfamiliar composite symbol for this purpose.

#### (5) th and dh.

It was explained above in § 5 that these letters are simply a concession to English visual habit and take the place of the Anglo-Saxon *þ* and *ð*, now usually employed in phonetic alphabets. They have the sound of *th* in *thin* and *th* in *this* respectively.

#### (6) w and y.

These have the sounds of *w* in *wet* and *y* in *yet*, respectively. Neither is used as the final element of a diphthong. Such spellings as *blow*, *blowing*, *say*, *saying* appear as blō, blō'ɪŋ, sē, sē'ɪŋ.

### 9. Foreign Words and Proper Names.

The alphabet hitherto under consideration was devised solely with reference to the English language, and hence does not provide exactly for certain sounds heard in foreign words and proper names. No difficulty is presented, of course, by borrowed words and names that have become completely Anglicized. More difficult is the problem presented by recent borrowings that have not yet become fully Anglicized, such as *hinterland*, *chauffeur*, *machete*; by relatively obscure names of persons and places, such as the ordinary reader may see now and then, but never hears and never has occasion to pronounce; and by recondite technical terms that are perhaps book words pure and simple. It must be remembered that the awe-inspiring phrase "correct pronunciation" has no other meaning than the pronunciation *usual* with educated speakers. If a word is not pronounced, or is pronounced very rarely by speakers of English, there is no usage, no convention, hence no standard of correctness. Let it not be supposed that the native or local pronunciation affords an ideal standard; if this were so the only correct pronunciation of *Socrates* would be sō-krā'tēs, and of *Naples*, nā'po-li. The ideal is really the phonetic form which the word is destined to take should it become completely Anglicized. But this is often very uncertain; and we have also to deal with a vast number of words and names which are so little used by speakers of English that they will never become Anglicized. In such cases the lexicographer can only approximate the native or local pronunciation.

We say "approximate," because any attempt at great precision would involve the use of a universal phonetic alphabet capable of recording not only the languages ordinarily studied in school and college, but also many others. But no one could read such an alphabet without special training in phonetics, and the information given by it would be, in the vast majority of cases, utterly useless. For it is impossible to learn exactly how the words of a foreign language are pronounced except by studying the language long and carefully. This being so, there is little use of meticulous exactness in giving the native or local pronunciation of foreign words that have no real currency in English.

In this edition of the STANDARD DICTIONARY there are no separate lists of proper names. But as there was to be but one vocabulary and the key to pronunciation was to be repeated on every page, it was obviously impracticable to employ a different alphabet or to introduce many new symbols for the foreign words and proper names. It was therefore decided to use the N. E. A. alphabet as it has been described, with the addition only of those special symbols which were employed in the first edition. These are *ñ* to denote nasality of a preceding vowel; *h* for the Scotch *ch* in *loch* (German *ch*, whether voiced or voiceless, guttural or palatal); and *ü* for French *u* (German *ü*), whether long or short. It should be distinctly understood that the pronunciations given, except in the case of words fully Anglicized, are but rough approximations.

The pronunciation of Latin presents a case by itself. Within the last few decades the so-called Roman pronunciation has been very generally adopted in the schools both of the United States and of England. The old-fashioned English pronunciation is no longer learned, or is learned only to a limited extent, and will soon become obsolete, so far as the reading of Latin authors is concerned. It persists, however, and will long persist, in proper names and in numerous words and stereotyped phrases pertaining, more especially, to law and medicine. Popular usage is already divided between the old and the new: one hears *ē* prai-ō'rai and *ū* pri-ō'ri; man-dē'mus and man-dū'mus (oftener man-dam'us). The ending *-itis* is regularly pronounced -ai'tis by Englishmen, while in the United States -ai'tis and -i'tis are about equally common. And there are other such cases of conflicting usage. It is probable that with the lapse of time the Roman pronunciation will prevail more and more, since modern scholarship is overwhelmingly in its favor. At the same time, the present facts have to be recognized. When the Dictionary gives the pronunciation of a Latin word or phrase according to the English method, it should by no means be understood that a preference for that method is thereby expressed. If, for example, *nisi prius* is given as noi'sai prai'us, the meaning is simply that the lawyer is apt to call it so in the court-room, albeit the same lawyer would probably say ni'si pri'us if he came upon the phrase in reading aloud from a Latin author.

### 11. Pronouncing by Use of the Old Alphabet.

Each respelling in the Dictionary is repeated in the familiar alphabet with diacritics, this notation being called Key 2. In Key 2 the vowels marked with a macron represent the sounds now commonly called long, and those with a breve represent the sounds commonly called short. The two diacritics indicate, except for the letter *o*, actual difference in quality of sound, not merely in quantity. The various letter-sounds are described above and in the articles treating the letters in alphabetical place in the vocabulary. References follow to the divisions (1), (2), etc., of the section "A, VOWELS AND DIPHTHONGS," above, for the sounds of the marked vowels. Unmarked vowels are explained separately.

For *ā* as in *arl*, see (2). In Key 2 *ā* is always used for this sound, without distinction of length.

For *ā* as in *fale*, see (4). For *ā* as in *fal*, see (1).

For *ā* as in *bare*, see (1). For *ā* as in *ask*, see (3).

For *a* as in *what* and *a* as in *all*, see (8). These are the same as *e* and *ē* of Key 1, *ō* and *ō* of Key 2.

For *ē* as in *me*, see (5).

For *ē* as in *mel* and *ē* as in *fēle*, see (4). The sound of *ē* is the same as that of *ā*.

For *ē* as in *bear*, the same sound as *ā*, see (1).

For *ē* as in *fern*, see (10). For *i* as in *tin*, see (5).

For *i* as in *bite*, see (12).

For *i* as in *girl*, see (10). This is the same as *ū* and *ē*.

For *i* as in *marinc*, the same sound as *ē*, see (5).

For *ō* as in *go*, see (7). For *ō* as in *not* and *ō* as in *corn*, see (8).

For *o* as in *woman*, *ōō* as in *boat*, and *ōō* as in *book*, see (9). These are sounds more commonly represented in regular spelling by *u* as in *full* and *ū* as in *rude*.

For *ō* as in *son*, the same sound as *ū*, see (10).

For *o* as in *tomb*, the same sound as *y*, see (9).

For *ū* as in *culc*, see (14). This is the sound noted in Key 1 by *iū* or *iu* (internal) and *yū* or *yu* (initial). Only the internal sound is noted by *ū* in Key 2, length being disregarded.

For *ū* as in *cul* and *ū* as in *burn*, see (10).

For *y* as in *put* and *y* as in *rule*, see (9).

For the diphthongs *ou*, *ow*, see (12), and for *oi*, *oy*, see (13).

In Key 2 the plain vowel letters are used in obscure syllables, corresponding to *ə* and *i* of Key 1. See (6) and (11). An exception is made in the use of *o*, in using it for the obscure sound in closed syllables as in *action*, *kingdom*, and for the *o* in *obey*, *history*, where the sound of *ō* is heard lessened in quantity. In closed syllables having the sound of *o* as in *obey*, seldom or never occurring in English words, *ō* is used in Key 2. Thus, in the German pronunciation of *Humboldt*, the second syllable is given as *-bolt* in Key 1, *-bōlt* in Key 2.

In Key 2 *y* is used as a vowel exactly like *i*.

Consonant sounds are the same in both keys, with the following exceptions: In Key 2 the digraphs *ch*, *sh*, *th* as in *thin*, and *zh* as without the tie-mark used in Key 1. See B (2), (4), and (5).

For *th*, as in *this*, see B (5). For *j*, see B (2).

For *ng* as in *sing* and *n* as in *ink*, see B (1).

In Key 2 the *k*-sound of *c* is noted by *c* and the *s*-sound by *ç*. These are always *k* and *s* in Key 1.

### 12. The Division of Words into Syllables.

Division of words into syllables is indicated in the vocabulary titles by insertion of hyphens and accent-marks as intended for practise in writing and printing. This work has been entrusted as a special department to Mr. F. HORACE TEALL. Respellings, the purpose of which is precise phonetic analysis, often necessarily differ in division from that shown in the titles, but agreement is preserved when possible. The approved division is always that shown in the heavy-faced print. Some words showing the conflict noted are *addi-tion*, *divi-sion*, *mea-sure*, *commu-nion*, *a-licen*, *na-tional*, *pecu-liar*, *spe-cial*, which are respelled *a-dish'ən*, *dī-viz'ən*, *mez'ur*, *kə-miūn'yən*, *ēl'yən*, *nash'ən-əl*, *pī-kiūl'yər*, *spesh'əl*.

The practise shown in the vocabulary is so simple and so unmistakably uniform that no elaborate system of rules is necessary. Every essential point is comprehended in the following four rules:

**Rule I.**—A consonant or a digraph or trigraph between two vowels goes into the later syllable when the first vowel is long, half-long, or obscure (except *-er* as in *gen-er-al*); as, *fa-tal*, *sea-son*, *sepa-rate*, *pro-gram*, *se-da-tive*, *omi-nous*, *mecha-nism*, *pecu-liar*, *pro-phetic*, *medi-cal*, *practi-cal*, *fa-ther*, *me-tallic*, *mo-nopo-ly*, *pre-sent* (v.), *de-throne*, *ca-pacity*, *pro-gress* (v.), *ca-pable*, *proce-dure*.

**Rule II.**—A consonant between two vowels goes into the earlier syllable when the first vowel is short and has any stress; as, *prod-uct*, *prog-ress* (n.), *rap-id*, *pres-ent* (n.), *vis-it*, *ton-ic*, *bus-y*, *crit-ic*, *proph-et*, *prophet-ic*, *cyn-ic*, *fath-om*, *flor-id*, *char-ity*, *sep-arate*.

**Rule III.**—Adjoining consonants usually separate into two syllables; as, *at-tract*, *con-demn*, *pam-phlet*, *syll-able*, *prac-tical*, *moun-tain*, *infan-try*, *connec-tion*, *produc-tive*, *delec-tive*, *suc-ces-sor*, *defen-dant*, *cor-respon-dent*, *as-sis-tant*, *mal-ting*, *com-pel-ling*, *fret-ted*, *En-gland*.

**Note.**—Doubled consonants ending a primitive word are kept together before a purely English suffix; as, *tell-ing*, *hiss-ing*.

**Rule IV.**—Purely English suffixes (*-ed*, *-er*, *-est*, *-eth*, *-ing*, *-ish*, *-y*) are always kept distinct (except when the terminal letter of the primitive word is repeated, as in *compel-ling*); as, *heat-ed*, *hat-ed*, *bak-er*, *speak-er*, *speak-est*, *wak-eth*, *search-eth*, *hast-ing*, *baptiz-ing*, *brak-ing*, *break-ing*, *freak-ish*, *head-y*.

**Note.**—Terminations like *-al*, *-ant*, *-ent*, *-ive*, *-or* are treated as merely Anglicized endings (usually of Latin or Greek words taken into English entire, but with terminal change), not as separable English suffixes. Thus such confusion as *music-al*, *practi-cal*, *con-junc-tive*, *dis-junc-tive*, *abun-dant*, *defend-ant*, which is found in some other works, is avoided. The treatment here given makes every one of these terminations begin with the consonant.

### 13. Spelling Reform.

The subject of spelling reform has lately received a large amount of attention, owing to the activities of the Simplified Spelling Board in the United States and the Simplified Spelling Society in Great Britain. Some simplifications, not at all radical in their character and consisting mainly in the dropping of superfluous letters, have already been promulgated. From the nature of the case these modified spellings will come into general literary use but slowly, if at all, but the weight of expert authority behind them clearly requires that they be taken note of in a dictionary for the people. As in all matters involving technical knowledge, the opinion of one expert is worth more than the practise of multitudes who have never studied the subject and merely follow the fashion as they have learned it. The proposals of the Simplified Spelling Board are recorded in this Dictionary. The rules adopted by the Board will be found in the APPENDIX, page 2780.

The scientific test of good spelling is tolerably simple. A language is well spelled if, when one has learned the letters and their sounds and has had practise enough to beget facility in their use, one can write correctly any new word that one hears and pronounce correctly any new word that one sees.

If now we apply the scientific test of good spelling to the English language in a large way, it will appear that much of it is good just as it stands. This is true of an immense number of monosyllabic words containing short vowels, and of a far larger number of polysyllabic derivatives from the Latin. Then there is another large group of words of which the spelling is not ideal, but good enough for practical purposes. It is a great mistake to speak of English spelling as if it were altogether bad and needed to be thrown into the melting-pot and recast. But there is a third portion which is bad in varying degrees of badness, and unfortunately this third portion comprises a pretty large number of the commonest words in the language—words of Germanic origin containing a long stressed vowel or a diphthong. If *go* is a good spelling, then it is obvious to any one that *though* and *road* and *door* and *hoe* and *note* are not good spellings. The lack of a uniform, or at least approximately uniform, notation for the long stressed vowels and diphthongs is the deep-seated fundamental fault of our spelling. Any reform which does not correct that will only touch the fringe of the difficulty.

How our spelling came to be so confused, so far as it is confused, is now well known to experts in English philology. Speaking very generally, the trouble is due to an ancient confusion of the phonetic standards of Anglo-Saxon and Norman French; to the retention of old spellings after they had ceased to be phonetically correct, and to the introduction of new spellings patterned after conflicting analogies or supposed to convey valuable information—which was often misinformation—about the etymology and provenience of words. The resulting chaos is not at all mysterious. We should have lost nothing precious, but should have gained very much, if our spelling had kept pace with our speech and were to-day as good, say, as that of Spanish.

The obstacle is the inertia and the prejudice of habit. The adult who has once learned to spell will always find it easier to go on in the beaten path. No matter how bad the path may be, it will always be for him personally the line of least resistance.

The reform must be solved gradually in the elementary schools. The associations that cluster about words are not transmitted from one generation to another. Each child acquires them for himself, and they can be made to cluster as fully about a good spelling as about a bad. In countless instances we have actually improved on the orthographic practise of our ancestors.

# METHOD OF COMPOUNDING WORDS.

PROFESSOR W. D. WHITNEY, in his book on *The Life and Growth of Language*, speaks of "a process which the general history of language shows to be more important than any other," and then says: "It is the composition of words, the putting two independent elements together to form a single designation." He shows distinctly that he includes here the union of word-pairs with a hyphen by citing *rest-day*, *learning-knights*, and *head-dress*. This is stated as a general language fact, not merely as English.

In such matters the lexicographer's record must show selection, especially in English, and undoubtedly that selection should accord with the best usage, as decided by some person or body of persons. For this Dictionary, originally, the decision was made by submission of the question, with the fullest possible detail, to hundreds of the men best qualified to answer it. But the department was controlled by one man, Mr. F. HORACE TEALL, who has again controlled it throughout the remaking. Mr. Teall had published the only book that ever treated the subject exhaustively, *The Compounding of English Words*, and was chosen because that book proved his fitness. The prevalent confusion of ideas had been shown in letters received before then, one of which, a fair sample, said, "I always use a hyphen whenever two words are to be written as one," and proved that its writer did not do so by containing *when* and *ever* united without a hyphen. Again, the question was, When should two words become one? And this was not answered at all.

Mr. Teall's first work for the STANDARD DICTIONARY was the making of a list of more than forty thousand words showing his answer to the question as he offered it for embodiment in the work. That list was printed separately and sent to scholars the world over—some even to Australia—with requests for suggestions and criticisms. Practically no criticism came, but much enthusiastic commendation; and the list was finally adopted for the Dictionary. Some persons, especially printers, say that fashions change in such matters so that what was once good is so no longer; but this is only an evidence of the common confusion, which is and has been always present in practise, and the forms selected originally are still held to be the best.

Every important dictionary of the English language published before 1890, and every one since then except one, has included thousands of word-pairs joined with the hyphen. Of course but one reason could be assigned for this practical universality of method, so far as the earlier workers had any definite policy in this respect. The similarity resulted from the fact that so only could they record the best usage, and that what they so recorded was best not only according to practise among leading writers and printers, but also in keeping with the art of grammar. Not only have the best writers used hyphenated compound words, but every grammarian who ever taught anything about them has evidently striven to lay a basis for analogical decision. Many grammar textbooks merely say that some compound words are written with a hyphen and some as continuous words, and then say, "Consult the dictionary."

The exceptional dictionary alluded to above is the one that very many people will consult, and they will find there *countingroom*, *dining room*, *drawing-room*; *taleteller*, *story-writer*, *letter writer*; *ropemaker*, *love-maker*, but *lace maker* and others (the two-word forms not given as titles); *devilfish*, but *angel fish*; these being merely a few specimens that indicate lack of system. Such differences found so frequently make it impossible for any one to know in a given instance without looking in the book whether this authority uses one form or another, except as frequent looking happens to impress a few distinctions upon the memory. Certainly no one can ever learn all the differences just as they appear in the book.

In that dictionary are *backbone*, *breastbone*, *jawbone*, but *check bone*, *haunch bone*, *hip bone*, *thigh bone*; in this work each bone-name is given with a hyphen, except that *backbone* is given for the

figurative sense. Provision is necessary (or at least more comfortable) for the use of one form for each literal name.

It is simply impossible to eliminate inconsistencies of form from the English language, even if it could be proved desirable to do so. No phase of the language is less amenable to such stricture than the question when to compound and when not to compound. Mr. Teall's claims are stated below. His platform as to consistency may be formulated in words used by Lindley Murray in writing about verbs: "A principle may be warrantably adopted, and carried to a precise convenient extent, without subjecting its supporters to the charge of inconsistency for not pursuing it beyond the line of use and propriety."

No principle of language can be adduced in support of a choice of form for *counting-room*, *dining-room*, or *drawing-room*, or for *story-writer* or *letter-writer*, or for *angel-fish* or *devil-fish*, that is not equally potent in every exactly similar instance. Various groups of similar words must have similar forms if they are to be on a basis of comfortable agreement; but no single group can ever be so absolutely differentiated that any critic could not find a point of objection, or at least of question.

A close study of English literature has been made and a system constructed in accordance with the rules of grammar, which was modified somewhat by such fully established usage as does not follow those rules. The aim has been to give a full exposition of the forms used by the best writers and printers, with the additional feature of an analogical systematizing of the forms in general literary use, so far as the genius of the language will permit. The editor believes that he thus comes closer than any of his predecessors to an actual record of prevailing good usage, and that he has provided a selection of forms worthy of adoption without change.

Each form is based upon grammatical analogy, according to the following

## General Principles.

1st. That all words should be separate when used in regular grammatical relation and construction, unless they are jointly applied in some arbitrary way.

2d. That abnormal association of words generally indicates unification in sense, and hence compounding in form.

3d. That no expression in the language should ever be changed from two or more words into one (either hyphenated or solid) without change of sense.

The first of these principles forbids joining an adjective and a noun in regular use (including in the classification as adjectives all words used with clear adjectival force); as, *spinal column*, *chestnut horse*, *brick house*, *fellow citizen*, *he bear*, *man servant*, *brother officer*, *Armstrong gun*.

Arbitrary application of such terms requires that they should be joined. Thus we have *blue coat* for the coat itself, but *bluecoat* for a man, and *redhead* is the common form of the name of a duck with a red head.

The first principle, moreover, keeps a regular adverb separate from the adjective it modifies, even when the two express one attribution; as, "*highly colored wings*," "*recently published book*."

The second principle makes two nouns used together as one name become one word, if the first is not really attributive. Thus, while *brick* is attributive in *brick house* (a house made of bricks), it is *not* attributive in *brick-yard* (a yard where bricks are made). *Brick* in the first instance has the same qualifying sense that *bricken* would have if that were used, and so is an adjective, properly standing alone; but in the second instance it has no sense other than the naming of what is made in the yard, and no quality or attribute of the yard is noted, except in the name as a whole.

The second principle requires compounding:

1. When two adjectives, a noun and an adjective, or any two or more parts of speech are abnormally associated to express one

attribution; as, a *down-stairs* room; *dark-brown* hair, or hair that is *dark-brown*; a *well-known* man; *knee-deep* snow, or the snow is *knee-deep*; *free-trade* doctrines; a *silk-and-cotton* fabric; *North-American* birds.

2. When one of two words used together as a verb, an adverb, or any part of speech, is in such use not placed in accordance with a rule of grammar; as, to go *down-town*; to *haller-break* a horse; a *cross-action*; a *counter-complaint*; *broad-mindedly*; *after-ages*.

### Rules for Selection of Forms.

The legitimate conclusion from these principles is, that if one term having elements of certain kinds is properly a compound word, so is every other exactly similar term. The following categories or rules are thus obtained:

1. Every name that shows mere ellipses and inversion of a phrase containing two nouns is a compound noun.

A "box for a hat" is commonly called a *hat-box*; "a brush for the hair," a *hair-brush*; "a stove for cooking," a *cooking-stove* or *cook-stove*. It may be safely affirmed that *hat-box* is printed as a hyphenated compound word much more frequently than it is printed as two words, and the same is true of *hair-brush*; so we select the compound form as fixed in the best usage. *Pill-box*, *shoe-box*, *paper-box*, *ribbon-box*, and *collar-box* properly have the same form as *hat-box*, and so on through the entire range of known or possible boxes that may be named by the word *box* preceded by the name of what the box is to contain. As of *boxes*, so of *brushes*, and so also of everything named in this way—every such name, except as noted below, is given as a hyphenated compound word. Some names that are unquestionably compounds in their nature have never been so written, and it would be pedantic to insist that they should be. In usage, almost universally, such words as *company*, *association*, *asylum*, have been kept separate, as in *railroad company*, *racing association*, *insane asylum*. There is no error in writing any one of these as a compound, but there is no urgent reason for doing so.

### Seemling Exceptions.

I. Some uses in which the first of two nouns really stands as an adjective are as follows:

(1) With the sense "made of," as in *silk dress*, *brick house*, *feather bed*, *pumpkin pie*, *stone wall*.

(2) With the sense "having the shape or the character or quality of," as in *barrel vault*, *alligator forceps*, *companion picture*, *he bear*, *man milliner*, *man servant*, *boy bishop*, *bull calf*, *brother officer*, *fellow citizen*, *mesh structure*.

(3) With the sense "pertaining to, suitable for, or representing," as in *parlor clock*, *city officer*, *district attorney*, *government employee*, *railroad supplies*, *insurance office*, *church furniture*.

(4) With the sense "characterized by," as in *diamond ring*, *cylinder press*, *cupola furnace*.

(5) With the sense "situated in, having a character naturally implied from situation or connection," as in *mountain streams*, *country gentleman*, *ocean steamer*, *school etiquette*, *society manners*.

In specific names of this kind, however, compounding is required by the fact of specification, which is merely naming. For some common compounds other than such purely specifying names no reason is apparent, unless accent be taken as a reason; but here the indefinable border-line that exists in all human affairs seems to be encountered. Thus (a) we have *sea-anemone*, *sea-gull*, *field-mouse*, *house-fly*, *mountain-fringe* (a plant), etc., and, (b) while we

say and write as two words *o'cean steam'er*, we say as one word *wa'ter-an'imal*, and it should be so written.]

(6) With the sense "acting in support of, advocating," as in *Jackson voters*, *silver advocates*, *silver man*, *prohibition speaker*.

(7) With the sense "residing, existing, or originating in, or coming from (a place)," as in *Brooklyn politics*, *Bath brick*, *New York schools*, *Florida oranges*.

(8) With the sense "originated or made by, or named after," as in *Armstrong gun*, *Williams College*.

II. *Apposition*.—Placing two nouns in apposition is very nearly the same in effect as using the first as an adjective, the difference being that in a case of real apposition either word may be used alone for the thing named, as in *monarch oak*, *knight templar*, *knight companion*.

2. Possessive phrases used as specific names are compound words.

Literature exhibits such names of plants, etc., in different forms. Certain books have some of them compounded and others as two words; as, *hare's-tail* for one plant and *lion's tail* for another. Certain other books have the difference reversed; as, *lion's tail* and *hare's tail*.

It is absolutely impossible to make a record of the use of these names showing differences in form that can be proved to be established. Every such name given in this Dictionary is joined by a hyphen, except a few long established in continuous form, as *colts-foot*, *sheep'shead*.

3. Some words representing phrases in literal sense have become established in the solid form; as, *sunbeam*, *daylight*, *hillside*, *loophole*.

4. Some generic nouns are used, in certain classes of names, almost like mere suffixes; as, *man*, *way*, *weed*, *wort*.

Words like *footman*, *coachman*, *airway*, *entranceway*, *milkweed*, *seaweed*, and *motherwort* have the solid form in this Dictionary.

Every specific name of a fish that has a monosyllabic specifying element, with *fish* as the generic element, is given in continuous form; as, *goldfish*, *bluefish*, *hogfish*. Longer names of this kind (except *cuttlefish* and *silverfish*) have the hyphen.

5. Most words used to designate something named from having as a characteristic or adjunct that which is expressed by the elements of the name are given in the solid form.

A man who wears a *blue coat* is called a *bluecoat*; a man who watches or looks out is called a *lookout*, and said to be "on the *look-out*"; a plant that looks like a *golden rod* is called *goldenrod*; a fish with a *gill head* is called the *gillhead*; and many other things are named in this way—by making a word of the two words naming a prominent feature, likeness, characteristic, or the like. Predominance of the solid form in literature for such names is easily provable, tho they are printed in all three forms—two words, hyphenated, and continuous. Exceptional use of the hyphen in this work occurs in words that are made clearer by it, as *mouse-eat*, *abscess-root*.

The forms given in heavy type throughout the Dictionary are very carefully selected and recommended for use, even if an occasional form found in the text is not the one given in the vocabulary for the same word. Care has been exercised to make the vocabulary and the text agree throughout; but, as many compounds may properly be written either with or without a hyphen, it is much more than probable that absolute agreement in this respect has not been attained.

# FOREIGN LANGUAGE CHART.

The following table shows the usual values of the various letters and combinations of letters in the alphabets of the several foreign languages included in its scope. In column 2 the modern English alphabetic characters, and some of their combinations, are given for comparison with the foreign. For convenience the phonetic symbols of the Revised Scientific Alphabet, listed with English key-words in the first column, are numbered consecutively from 1 to 59, these numbers being repeated at the right-hand margin of each page, and, together with the symbols, at the left-hand margin of the second page. The figure before a letter in a language column

indicates the number of such letter in its alphabet, and the small figure at the right of a letter gives the number of the explanatory note below referring to that letter. Thus, in line 16 (phonetic symbol "g as in go"), there stands in the Danish column "7 g<sup>4</sup>." By this is meant that *g* is the seventh letter in the Danish alphabet, that it is (sometimes) to be pronounced as *g* in the English word *go*, and that the conditions in which the letter has this value are stated in remark 6 in the Notes on Danish. Letters placed in parenthesis-marks are either variants or else call for special attention because they stand for a sound a little different from that represented by

## GENERAL REMARKS ON SOUNDS FOREIGN TO ENGLISH.

[EXPLANATION.—In the following remarks and notes, all characters used as letters of an alphabet are set in italic form (Greek and Hebrew letters excepted), and all used as phonetic symbols are set in roman. That is to say, whenever a letter is italicized, the reader should call it "the letter so-and-so," and sound it as in the English alphabet (or, if preferred, in the alphabet of the language under discussion); when a letter is printed in the roman character, one should call it "the sound so-and-so," and pronounce it as directed in the column of phonetic symbols. The sign (=) is to be read "is pronounced as" or "pronounced as." For example, "e before a, o, u, = k" means "the letter e, when it stands before the letter a, o, or u, is pronounced as the sound k." Perhaps it should be added that letters and symbols introduced in the course of the remarks and notes are generally arranged not in alphabetical order but on the basis of the phonetic relations of the sounds that they represent.]

Syllables are called "open" when they end in a vowel. A single consonant between vowels, or any combination of consonants that can begin a word, is usually to be thrown with the following vowel. Hence a vowel, followed by a single consonant not final, is generally in an open syllable, but one followed by two or more consonants not final (unless the group is a combination that may stand at the beginning of a word) is in a closed syllable, because it is necessarily followed in its own syllable by a consonant. Thus, in *pit-ter* the *t* stands in an open syllable, in *pit-fer* the *f* stands in a closed syllable. A vowel may be phonetically in a closed syllable, but the spelling may show that it was formerly in an open syllable, as in the English word *dale* (dāl), which in early Middle English was pronounced dāle. The matter is of some importance because the length and the quality of vowels often depend upon whether they are (or were formerly) in an open or a closed syllable.

Other terms used in the notes, as "voiced," "voiceless," "palatal," "velar," "spirant," etc., will be found defined in the vocabulary.

An English-speaking person needs to be cautioned against pronouncing foreign long vowels as diphthongs. In English long ē with most speakers ends with a light i resonance (that is, as a diphthong, ēi); long ō is generally turned into ōu; long ū into ūā. But in German, French, and European languages generally, these vowels are to be pronounced without the i or u element at their close. Foreign vowels are generally triser than English vowels.

### VOWELS.

"Rounding" is the effect on a speech-sound of pursing the lips till the orifice is roundish, as in sounding

English ū (*boot*). In English only back vowels are rounded; in some other languages certain front vowels are thus modified.

1. Rounded i. To make it, say i (as in *see*, *machine*), at the same time pursing the lips as for ū (in *rule*). The symbol used in this dictionary is i<sup>1</sup>.
2. Rounded ē. Say ē (as in *fat*), at the same time pursing the lips. This is the sound heard in French (*eu*), German (*long ē*), etc.
3. Rounded e or a (really a sound between e and a). Make such a sound, at the same time pursing the lips. The sound is heard in French (*eu*), German (*short ō*), Danish (*ō*), etc.

The English sound nearest to these last two is the ū of *burn* (bŭrn), and hence the symbol here used for these two rounded vowels is ā. But the foreign sounds are not exactly ū. This English vowel is made at the middle of the mouth (by raising the middle portion of the tongue), and the lips are only slightly if at all pursed. The foreign sounds are made in the front of the mouth (by raising the front of the tongue, as for ē and e respectively), and are strongly "rounded."

4. In several languages, e. g., French, are heard "nasal" vowels, that is, vowels to which a nasal quality is imparted from the fact that, while they are being sounded, the passage through the nose is open as well as that through the mouth. Hence part of the voiced breath escapes through the nose and reverberates in the nasal cavities. The nasal vowels are not vowels followed by n or ŋ, but simply vowels that receive their quality or *timbre* from resonance in both mouth and nose instead of in mouth alone. In this dictionary nasality in a vowel is indicated by adding to the symbol of that vowel the symbol f; whence *af*=nasal a, *āf*=nasal ā, etc. Many Americans, in their normal speech, unconsciously pronounce some or all of their vowels with a nasal quality; hence they are in danger of making the foreign vowels too strongly nasal.

### CONSONANTS.

Consonants in foreign languages (with some exceptions) are more carefully, and often more firmly or energetically, enunciated than in English.

5. In Scotch Gaelic, German (*ch*), and some other languages there is heard a velar spirant, represented in this dictionary by the symbol *h*. The sound is made by raising the tongue at the back of the mouth (*toward* the position for *k*) until the breath makes a rasping noise as it is forced out through the narrowed place. It is

the strong *h* heard in an emphatic *who*. There is also a palatal spirant, the German *ch* heard in *mich*, and elsewhere after "front" vowels (i, e, ū). It is made by raising the front of the tongue (as if to whisper *ye*), and forcing the breath out with the tongue held tensely in that position. The sound is the strong *h* heard in an emphatic *how*. When English *y* (not the whispered *y*) is prolonged, the sound is a corresponding voiced palatal spirant. The velar spirant *h* (in Scotch *loch*, German *dach*, etc.) may also be voiced; and such a sound is heard in German *nd* and Danish (intervocalic *g*), and elsewhere. The sound does not exist in English, but would be heard if one pronounced the word *ouger* (ōger) without raising the tongue for the *g* high enough to close the mouth passage completely. The velar spirants here described occur in association with a back vowel (g, ō, ū), and the palatal in association with a front vowel (i, e, a, ū).

6. What one may call "palatalized" consonants occur in some European languages; they are a characteristic of Russian and Polish (Slavic languages), and of Hungarian. These consonants are made by combining the sound *y* with the normal consonants. Palatalized *l*, for example, is not *l* followed by *y* (as one hears it in *brilliant*), but *l* and *y* merged into one—*nl* made by raising not the tip of the tongue to the upper gums, but the front of the tongue to the front part of the palate above it. Palatalized *n* is made not by pressing the edge of the tongue against the upper gums, or roots of the upper teeth, as for normal *n*, nor by pressing the back of the tongue up against the back part of the roof of the mouth, as for *ŋ* (heard in *sing*), but by raising the front of the tongue just as for *y*, but further, until it is pressed against the front palate. After such a palatalized consonant there will almost unavoidably be a more or less distinct *y* heard as a glide to a following vowel; and the symbol used in this dictionary for these consonants is a combination of the appropriate consonant symbol with the symbol *y* (ny, ly, etc.). But such a symbol as *ny* is not to be interpreted as *n* followed by *y*, but as an *n* made at the same place in the mouth as *y* is made. It should be noted that the so-called *lemouille* in French (spelled *-il, -ill*) and in Hungarian (spelled *ly*) has in the best standard pronunciation ceased to be an *l* at all, but is pronounced simply as *y*.
7. For most of the voiced consonants there are corresponding voiceless consonants; as, *b* and *p*; *d* and *t*; etc. But there is in English no "voiceless" *l*. It is heard in Welsh, however, spelled *ll*. To make it, place

# FOREIGN LANGUAGE CHART.

the parallel character in the column of phonetic symbols, the explanatory note giving the needed information in each case.

In the chart the several languages are grouped on the basis of their kinship, as follows: the Teutonic, the Slavonic, the classical (Greek and Latin), the Romance, and the Celtic, of the Aryan family; the Hungarian of the Altaic-Ural group; the Hebrew of the Semitic family. Such a grouping makes possible a comparison of the sound systems and of the spellings in related Aryan languages, suggesting how far the spelling has become archaic by the shift of the language sounds from an earlier

basis approximately represented in classic Latin. The chart shows the general agreement of the continental (European) languages in the values that they assign to the vowel letters.

The chart, and the notes which accompany it, supply only the main or more usual values of the letters, and particularly these as they occur in native words. In loan-words, as noticed here and there in the remarks, letters often preserve the value they have in the foreign language from which the words are taken—a value often quite other than that normal to them in the native words.

the tongue in position for l, and then simply send out breath instead of voice past the sides of the tongue.

8. At least three r's should be distinguished: (1) The usual English r, made by raising the tip of the tongue close to the upper gums. Many sound it only before vowels. (2) A trilled r heard in Scotch, French, German, etc., made by raising the tip of the tongue almost to the upper gums and setting the tip to vibrating or fluttering against the gums. (3) The "uvular" r, made by raising the back of the tongue close to the soft palate and by means of the stream of breath setting the uvula to flapping in the narrow passage. In continental (European) languages the uvular r is frequent. The words *trilled* and *uvular* are in the language chart abbreviated to *tr.* and *uv.* respectively.

9. Strictly native words in French, Italian, Spanish, and some other European languages, do not use the letter w, which appears, in the main, only in borrowed words. In some native words, however, a sound like w is heard, represented by other letters. In French, for example, there are two w's, one represented by u (as in *nuil*), the other by ou (as in *ouï*). They differ in that the first (that represented by u) begins with the tongue and lips approximately in position for "rounded" i (see Rem. 1 above), and the second begins with a position similar to that for ū—is, in fact, about the normal English v. The sound of French u would, then, be more nearly represented by ū; but to avoid multiplying symbols the one symbol u is used in this dictionary to represent both the normal v sound (which begins with ū) and this other v (which begins with ū).

10. English f and v are made by placing the lower lip against the upper teeth. In some other languages, as Spanish and Latin (Roman method), similar consonants are *bilabial*, that is, made between the two lips. Such a v is like an English v, except that the lips are not pursed into a roundish opening, but are spread, the voice escaping, not all at the center, but between the lips along their total length. When the lips separate, they do so all at once, not with the gradual widening that marks the English w.

## NOTES ON THE SEVERAL LANGUAGES.

### 1, 2. English and Anglo-Saxon.

Both modern English and Old English (Anglo-Saxon) have the Germanic accent—on the root syllable. The Anglo-Saxon letters here given are the Roman letters as used in Britain at the time of the conversion

of the Anglo-Saxons, with the addition of two runic letters, *þ* (wen) = w, and *ƿ* (thorn) = th, and the crossed roman d (ȝ) = w, which was a variant of *þ*. In linguistic and phonetic work to-day, the last symbol (ȝ) is often used for th, in distinction from *þ*.

- The diphthongs ai, au, ei are very rare in Anglo-Saxon manuscripts; *æg* = ay, in later Anglo-Saxon ai.
- Anglo-Saxon *f*, *þ* (ȝ), *s* = usually f, th, s; but medially between a vowel and another voiced sound *f* = *þ* (*ȝ*) = th, and *s* = z.
- Anglo-Saxon *g* was probably a voiced palatal or velar spirant (= voiced h; Gen. Rem. 5); but *gg* = g, and *g* before i, e, y, and final after a front vowel = y.

Further description and discussion of the letters and their sounds may be found in the vocabulary under the corresponding English letters.

### 3. Dutch.

Dutch words are accented as German: chief stress on the root-syllable, which is usually the first.

- The Dutch vowel system is extremely simple. In open syllables, *a*, *e*, *i*, *o*, *u*, and in closed syllables *aa*, *ee*, *ii*, *oo*, *uu*, are pronounced as *ā*, *ē*, *ī*, *ō*, *ū*; and in closed syllables *a*, *e*, *i*, *o*, *u* are pronounced as *a*, *e*, *i*, *o*, *u*. *oe* = *ū*. *eu* = *ū* ("rounded" *ē*; Gen. Rem. 2).
- The Dutch diphthongs are *ai* = *ai*; *ei*, *ej* = *ai* (almost *ei*); *au*, *ou* = *ou* (almost *au*); *oi* = *oi*; *eu* = *eu*; *iu* = *iu* (almost *ei*); *oei* = *ui*; *uw* = *ū*. That is, Dutch diphthongs consist of the two vowel sounds indicated by their spellings, except that *ij* = *ei*.
- b*, *d*, *g*, as in English. But when final, *b* = *p*, *d* = *t*, *g* = *n*, unless the next word begins with a vowel or *b* or *d*. *dt* = *t*.
- f* and *s*, when followed by a vowel or *b*, *d*, become *v* and *z* respectively.
- c* before *a*, *o*, *u*; *k*; before *e*, *i*, *s*.
- ch* (in native words) = *h*. Initial *sch* = *sh*; medial or final *sch* = *s*, and in the reformed spelling the *ch* is discarded. *ʔ*: borrowed words, *ch* = *k* or *sh*, according to the source of the words.
- sj* after a "round" vowel (Gen. Rem. 1-3) is often pronounced *sh*; otherwise it is simply *s* followed by *j*, that is, *sy*.
- After *k*, *p*, *t*, *ch*, *f*, *s*, the letters *v* and *z* are sounded as *f* and *s*; *bv* = *pf*, *gz* = *sz*; *bz* = *ps*, *vz* = *fs*, *gz* = *ns*.

### 4. German.

The German alphabet has three letters, *ä*, *ö*, *ü*, which are treated not as independent letters, but as forms of

*a*, *o*, and *u* respectively. If these were counted, the alphabet would have 29 letters.

The chief accent of words is generally on the root syllables in simple and derivatives, and on the first member of compounds. German vowels are more explosively begun than the English or French: what phoneticians call the "glottal stop" (a faint cough) is usually heard before all accented initial vowels. This glottal stop prevents German words from "running together," as English and French words do.

- The vowels are generally long in open accented syllables, short in closed accented or in open unaccented syllables; but the short vowel has approximately the same quality as the long. In the older spelling, now being discarded, a silent *h* after a vowel is a sign of length. *ci* = *oi*, *eu* = *oi*, *ie* generally = *i*.
- There are several so-called "modified" (*umlaut*) vowels in German: *ä* = *e* (when long, it is really between *e* and *a*); *ö* when long = "rounded" *ē*; when short = "rounded" *e* or *a* (Gen. Rem. 2, 3); *ü* = "rounded" *i* (Gen. Rem. 1); *äu* = *oi*. *ä*, *ö*, *ü* are sometimes printed as *ae*, *oe*, *ue*, *au*.
- ch* is a velar spirant when following *a*, *o*, *u*, and a palatal spirant when following *e*, *i*, *ä*, *ö* (see Gen. Rem. 5); the symbol used in this dictionary is *h*. Before *s*, *ch* = *k*. In foreign words *ch* may = *k* (generally Greek words), or *sh* (generally French words).
- g* in native German words may in all cases be pronounced as *g*; but in present-day preferred usage it represents also two other sounds: (1) when final, it becomes equivalent to *ch* (that is, *h*; see Note 3 just above); and (2) when between vowels, it is pronounced as a voiced *h* (see Gen. Rem. 5).
- German initial *h* is strongly aspirated—far more so than English *h*. It is often a silent sign of length in the preceding vowel, but the reformed orthography discards it in this value.
- c* appears only in non-German words. In these, before *n*, *o*, *u*, it is pronounced as *k*; before *e*, *i*, *ä*, *ö*, *ü*, as *ts*. In preferred reformed spellings it is replaced by its German equivalents.
- b* and *d* are sounded about as in English, except when final, or before a voiceless consonant, in which position *b* = *p*, *d* = *t*.
- In foreign words not fully nationalized the foreign values are preserved; hence in these *u* = *ū* in words from the French, *y* = *ū* in words from the Greek.
- s* has the sound of *s*, or of *z*: *s* = *s* when final in a word or a syllable, when preceded by any consonant other

- Italian *e* represents sometimes *ē*, sometimes *e* or *a* (more strictly, a sound between *e* and *a*). The best guide to the value of the *e* is the Latin source of the vowel. No brief rule can be stated. One may say that *e* when unaccented, when in monosyllables, when final and accented (always marked with a grave accent), and generally when in an open stressed syllable, has a sound near *ē*.
- The several Italian diphthongs are simply combinations of the sounds represented in their spellings.
- c*, and the *c* in *ce*, before *a*, *o*, *u*, and *ch* in all cases, = *k*; *g* before *a*, *o*, *u*, and *gh* in all cases, = *g*.
- c*, *cc*, before *e*, *i*, = *ch*; *sc* before *e*, *i* = *sh*; *g*, *gg*, before *e*, *i*, = *j*.
- h* is silent. It is infrequent except after *c* and *g*.
- gl* (before *r*) and *gn* represent respectively the "palatal" *l* and *n* (see Gen. Rem. 6).
- n* before *g* = *ng*; hence *ng* always = *ng*, never *n*.
- The value of *o* in Italian (as of *e*; Note 1 above) depends largely upon its Latin source, knowledge of which is an approximate guide. *o* when in unaccented syllables, and when in monosyllables ending in a consonant, = *ō* or *o*; but when final and accented, in monosyllables or otherwise, = *ō* or *o*.
- s* when initial before a vowel, or when followed by a voiceless consonant, or when doubled (*ss*), = *s*; when between vowels (but not the initial of the second part of a compound word), or when before a voiced consonant, = *z* (exceptions are numerous).
- u* as a vowel always = *ū*. It may be short, but still has the quality of *ū*, not of *u*. Unaccented *u* before a vowel is a consonant and = *w*.
- Unaccented *i* before a vowel is a consonant and is sounded as a palatal *h* (see Gen. Rem. 5), but somewhat softer; it is, in fact, almost *y*. The letter *j* is simply a variant of *i* in this value.
- z*, *zz* when initial, or medial after *n* consonant, or before *i* followed by another vowel, = *ts*; when between two vowels, generally = *dz*.

## 12. French.

In French words no one syllable has a decided accent, but nearly all syllables are uttered with equal stress of voice. To an English ear a chief stress seems to fall on the final syllable; hence, in this dictionary, the primary accent (') has been placed over the last syllable of most French words, and the secondary accent (") on the other syllables (except over obscure *e*), to indicate a careful enunciation of all the unaccented syllables.

- a* represents sometimes *ō*, but generally a sound between *a* and *ā*: (1) *a* = *ō*, in the endings *-as*, *-as* (when the *s* or *z* is pronounced, and often when *s* is silent), *-ase*, *-azon*, *-aille*; and when circumflexed *â*; (2) *a* (in most other cases), *â*, and *ā* are pronounced with a sound near that of *a*, but not so "flat" as this English vowel. French *o* approaches the sound *a* especially before the final sounds *b*, *d*, *g*, *l*, *m*, *n*, *ny* (that is, the letters *b*, *d*, *g*, *l*, *m*, *n*, *gn* when these are pronounced), and before final *-re*, *-ge*, *oi* = *wō* when following *r*, and in the ending *-oie*; in most other cases *oi* = *wa* (with a not so "flat" as the English *a*).
- (1) *e* before a pronounced consonant, before final silent *t*, *s*, and final silent *s* in monosyllables; *ei*, *oi* (except the verbal ending *ai*); *ê*, *ay*, *ey* — all are pronounced as *e* (really a sound between *e* and *ā*). (2) *ê* followed by a final silent consonant (other than *t*); or (when it is a verbal ending) — all are pronounced as *ē*.
- (1) *o* when it is the final sound in a syllable (that is, it may be followed by silent consonants), and *o* in the endings *-ose* (and generally before an *s* which has the value of *z*), *-me* and *-ne*; *ô*, *ad*, *au*, *eau* — all are pronounced as *ō*. (2) *o* not as above, and *au* before *r*, = *o*.
- eu*, *au* not followed in the same syllable by a pronounced consonant, or in a closed syllable ending with the sound of *z* or *t* (*-euse*, *-eute*, *-eure*), *eu* = "rounded" *ē* (Gen. Rem. 2); otherwise, *eu*, *au*, and always *ue*, *œ* before *-ille* (= *y*), = "rounded" *e* (Gen. Rem. 3).
- For pronunciation of *u*, *ū* = *u*, see Gen. Rem. 1.
- e* when final in unstressed syllables = *ə*; at the end of a word it is usually silent (as in English).
- Final *d*, *g*, *n*, *p*, *s*, *t*, *x*, and *z* are usually silent. But when the following word begins with a vowel, "liaison" may occur. These consonants (not in all cases; no rule can be given) are then pronounced as if beginning the following word, *d* being sounded as *t*, *g* as *k*, and *z* as *s*. *r* is silent in the final syllables *-er* and *-ier*. *h* is in most words silent.
- c* before *a*, *o*, *u* = *k*; before *e*, *i*, *y* = *s*; *ç* = *s*. *ch* = *sh*; but when final or before a consonant = *k*. *g* and *qu* generally = *k*.
- g* before *a*, *o*, *u* = *g*; before *e*, *i* (*y*) = *ʒ*; *ge* before *a*, *o*, *u* also = *ʒ*.
- gn* = "palatal" *n* (see Gen. Rem. 6).
- il* after a vowel = *y*; *il* = *ly* (see Gen. Rem. 6); also *i* before a vowel = *y*, unless a group of consonants precedes. By *y* is here meant the initial stage of the sound, not its consummation.
- m*, *n*, final or before a consonant, other than *m*, *n*, are silent, but impart to the preceding vowel a nasal quality. In such conditions, *am*, *an*, *em*, *en*, = *ān* (but final *n* preceded by the sound *y* = *ān*, not *ān*); *aim*, *oin*, *ein*, *im*, *in*, *ym*, *yn* = *ān*; *om*, *on* = *ōn*; *oin* = *wān*; and *um*, *un* = *ūn* (or *ān*). (See Gen. Rem. 4.)
- s* between vowels = *z*.
- ti* = *-si*, or *-ty*; a rule can not be stated.
- French has the letter *v* only in some foreign words; but the sound is heard in French words, spelled *ou* (as in *ouï*); and it is, further, the first element in the sound represented by *oi* (= *wa* or *va*), and by *oin* (= *wān*). A similar sound is spelled with *u* (as in *nuit*, *nuage*); but the sound of *u* in these words is not exactly *w*; it differs from *w* in that it begins with the organs in position for *ū*, not for *u* (see Gen. Rem. 10).
- x* between vowels generally = *z*. Otherwise, *x* = *ks*.

## 13. Spanish.

In general, Spanish words ending in a vowel or diphthong, or inflectional *-s*, *-n*, have the accent on the penult; with any other ending, on the final syllable. When the stress varies from this position, its place is often indicated by an acute accent-mark over the

stressed vowel. Spanish vowels, whether stressed or unstressed, are enunciated fully and clearly.

- a*, *i* (*y*), *u*, whether long or short, have the sound of *ā*, *ē*, *ū*, respectively. *e* and *o*, when final in word or syllable, = *ē* and *ō*; when in a closed syllable, or before *ll*, *rr*, = *e* and *o* (or, more exactly, between *o* and *ō*). An unstressed *u* before another vowel = *w* (as in Italian, Note 10).
- Spanish diphthongs, both "rising" (having the stronger stress on the second vowel) and "falling" (with stronger stress on the first vowel), are numerous, but are to be pronounced simply as the letters representing them indicate; *as*, *ai* = *ai*, *ao* = *ou* (almost), etc.
- b* = *b*; but between vowels it becomes a bilabial *v* (see Gen. Rem. 10). *r* has virtually the same sound as *b*, but a little softened, the contact between the lips being not so firm. *d* = *d*; but when final = (almost) *th*.
- ch* = *ch*. *c* before *e*, *i* = *th* (in Spanish America, *s*); otherwise, *c*, and *qu* always = *k*; *cc* = *kth*.
- g* before *e*, *i* = *g* (Gen. Rem. 5); otherwise, *g*, and always *gu* before *e*, *i* = *g*; between vowels, *g* often approaches a voiced *u* (Gen. Rem. 5).
- h* is silent; initial *hu* followed by another vowel = *hw*, as in *where*. *j* = *n* strong *h* (almost *n*).
- ll*, *ñ* represent the "palatal" *l* and *n* (Gen. Rem. 6). *n* before a *k* or *g* sound = *ŋ*.
- x* = *ks*; but before *p*, *t*, *c* often *x* = *s*.
- y* between vowels or initial before *n* vowel is a strong *y* (almost palatal *h*; Gen. Rem. 5). In other positions *y* is a vowel, being *n* variant of *i*, and = *i*.
- z* = *th* (in Spanish America, *s*).

## 14. Portuguese.

The accent in Portuguese is much as in Spanish.

- Portuguese has many diphthongs: the so-called "rising" which begin with half-consonantal *i* or *u* (light and fleeting), and the so-called "falling" which end with half-consonantal *i* or *u*. The diphthongs are pronounced just as they are spelled, except that *ei* = *ai*.
- b*, *d*, *g*, when between voiced sounds (that is, when preceded by a vowel and followed by a vowel or a voiced consonant), are somewhat altered from the normal *b*, *d*, *g*; *d* becomes almost *th*; *g* becomes the voiced *h* (see Gen. Rem. 5); and *b* becomes a bilabial *v* (that is, a *v* made between the two lips instead of between the lower lip and upper teeth; see Gen. Rem. 9).
- ç*, and *e* when it is stressed and long, or before final *r*, = *ē*. *ç*, and *e* when stressed and short, or before *r* not final, or before *ss*, *r*, or *c* (= *s*), = *e* (more exactly, a sound between *e* and *ā*).
- g* before *a*, *o*, *u*, and *gu* before *e*, *i*, = *g*; *g* before *e*, *i*, = *ʒ*; *gu* before *a* = *gw*, *u* and *c* before *a*, *o*, *u*, = *k*; *ç*, and *c* before *e*, *i*, = *s*. *ch*, *x* (generally) = *sh*.
- e* in unstressed syllables generally = *ə*; but unstressed *e* before a front consonant (that is, one made in the front of the mouth), and unstressed *i*, = *i*.
- lh*, *l* (when final), and *nh*, are sounded as the "palatal" *l* and *n* (see Gen. Rem. 6).
- n* before the sounds *k* and *g* is pronounced *ŋ*, with the preceding vowel nasalized (Gen. Rem. 4); but the *ŋ* is very light — a mere glide from the nasal vowel to the following consonant.
- Nasal vowels are numerous in Portuguese. They arise as in French; but the matter is simpler in Portuguese because the fundamental quality of the vowel is not changed, with the exception that *am* = nasal *ou* (*ouñ*). Otherwise, regularly, *an* = *ān*, *em*, *en* = *ēn*, *im*, *in* = *īn*, *oñ* = *ouñ*, etc. Sometimes nasal vowels in Portuguese are indicated by a tilde (as *ā*, *ō*).
- ou*, and sometimes *o*, = *ō*; *o* (when short and in a closed syllable) = *ə*; *o* when final, and generally when in an open syllable, = *ū*. When *o* stands before or after another stressed vowel, it forms with that vowel a diphthong, the *o* being sounded as a light *u*.
- s* initial and *ss* = *s*; *s* between vowels = *z*; *s* between a vowel and a following voiced consonant = *ʒ*; *s* final or before a voiceless consonant = *sh*. *s* initial or between vowels = *z*; when final or before voiceless consonants = *sh*; when before a voiced consonant = *ʒ*.
- y* in Portuguese is a variant of *i*, and = *i*.

## 15. Welsh.

Welsh words of more than one syllable are generally accented on the penult. Certain verbal endings, however, receive the stress; and a number of dissyllables with the prefixes *go-*, *ym-*, *ys-*, and substantives in *-awdr*, have the stress on the last syllable.

In the standard or approved spelling, every letter is sounded, and no letter (with few exceptions) has more than one sound.

- a*, *e*, *i*, *o*, *u*, *y*, when long, are sounded as *ā*, *ē*, *ī*, *ō*, *ū*, *y*, respectively; when short, they have approximately the same sounds, except that (1) short *a* = *a*, and (2) *y* in monosyllables, in final syllables, in the prefixes *cyd-* and (sometimes) *cym-*, and when preceded by the vowel *u* (= *ū*), has the sound of *ū*. *i* before another full vowel is consonantal and pronounced as *y*.
- Welsh diphthongs are numerous, but offer no difficulty; they are pronounced as the component letters of the spelling indicate.
- ch* = *h*; *f* = *f*; *dd* = *th*; *th* = *th*.
- ng* = *ŋ*; *ng* = *ŋh*. These sounds, never initial in English, may begin words in Welsh.
- l* is simply voiceless *l* (Gen. Rem. 7). Welsh *mh*, *nh*, *rh* are aspirated *m*, *n*, and *r*; they have much the effect of strong voiceless consonants.
- j*, *k*, *g*, *r*, *x* occur in foreign names; but many Welsh writers substitute the Welsh equivalents.

## 16. Hungarian.

Hungarian, the most important member of the Ural-Altaic group, is agglutinative in structure, words being built up by adding to *n* monosyllabic root successive formative suffixes. The vowels in these successive syllables are related to each other by the law of vowel harmony, or harmonic sequence. See HARMONIC SEQUENCE.

The accent in single words (simple or compound) rests upon the first syllable; in long words there is a secondary accent generally on the third syllable. But the lighter stressed syllables have scarcely less weight

than the fully stressed, and consequently every vowel is pronounced full and clear.

Hungarian spelling is very consistent: the letters and combinations of letters (in striking contrast with English spelling) generally keep each its one phonetic value, with the exception of *e*, which sometimes = *e*, and sometimes (especially before *r*) is more open, approaching *ā*. Consequently, the values of the letters once learned, any one can pronounce any printed word or spell any spoken word without difficulty. An acute accent over the various letters serves to distinguish the long (and *tense*) vowels, the letters for the corresponding short (and *lax*) vowels being unmarked. Counting the accented letters and the digraphs, the alphabet has 38 letters.

- The letters *é*, *ē*, *ō*, *ū*, *ü* are sounded as *ō*, *ē*, *ī*, *ō*, *ū* ("rounded") *ē* — Gen. Rem. 2), *ū*, *ü* ("rounded") *ū* — Gen. Rem. 1), respectively — all long vowels. *a*, *e*, *i*, *o*, *u*, *ü* = *o*, *e*, *i*, *o*, *u* (but short), *ü* (but short), *ü*, respectively — all short vowels. Diphthongs are represented by the letters of their constituent elements: *ai* = *oi*; *ei* = *ei* (nearly *ni*); *au* = *ou*.
- Consonants are sounded as normally in English, except that *s* = *sh* and *j* = *y*. Consonant combinations as follows: *cs* = *ch*; *dsz* = *j*; *cz* = *ts*; *sz* = *s*; *zs* = *z*.
- Several "palatalized" consonants are heard in Hungarian (cp. Polish 9 and Gen. Rem. 6), indicated in the spelling by placing the letter *y* after the proper consonant letter, as *dy*, *ly*, *ny*, *ty*. (*y* serves no other purpose in Hungarian.) These sounds are the respective *d*, *l*, *n*, *t* sounds modified by raising the front part of the tongue as if for *y* at the time the consonant is pronounced; the position of the tongue gives a light *y*-glide after the consonants. The effect is to make *dy* sound somewhat like *j*, *ty* somewhat like *ch*. *gy* is pronounced as *dy*, somewhat like *j*. The Hungarian "palatal" *l* (spelled *ly*) has become in present pronunciation a simple *y* (as in French; see Gen. Rem. 6).
- n* before *k*, *g* = *ŋ* (hence *ng* always = *ŋg*, as in *finger*, never *n* alone, as in *singer*).
- A final consonant of one syllable is consistently assimilated to an initial consonant of the next syllable; that is, before a following voiceless consonant, all voiced consonants (except nasal and liquid consonants, *m*, *n*, *l*, *r*) are pronounced as the corresponding voiceless; and before a following voiced *stop* consonant, and *z*, *zs* (= *z*, *ʒ*), a voiceless consonant becomes voiced: before *p*, *t*, *k*, etc., *b* is pronounced as *p*, *d* as *t*, *g* as *k*, etc., and before *b*, *d*, *g*, etc., *p* is pronounced as *b*, *t* as *d*, *k* as *g*, etc.

## 17. Hebrew.

Hebrew is one of the Semitic languages, and has no close relations with the other languages represented in the chart. The others are all interrelated — members of the Aryan or Indo-European family, supposed to be developed from a common mother tongue.

Hebrew is written from right to left. Its alphabet consists of 23 consonants, the vowel sounds being represented by small dots and dashes placed (with three exceptions) under the consonants after which they are to be pronounced. In the table *n* horizontal dash indicates the position of the consonant, the vowel signs (except *·* for *o*) appearing under it. In two other exceptional cases (an alternate sign for *ō*, and the sign for *ū*) the dot is associated with the silent symbol *·*; and the symbol for *ē*, *i* may also have a silent *·* after the consonant that *ē*, *i* is to follow.

Three letters (*ק*, *י*, *ו*), originally vowels (*a*, *i*, *u*, respectively), are now mere vowel-strengtheners, or else virtual consonants, being respectively the "soft breathing" (Greek "English *h* in *hour*"), *y* (consonant form of *i*), and *w* (consonant form of *u*).

Hebrew vowels are long in open (simple), short in closed (compound) syllables. Their values are further affected by the accent. The vowel signs are as follows:

$\bar{\text{—}}$	= $\bar{a}$	$\bar{\text{—}}$	= $\bar{o}$
$\text{—}$	= $\bar{e}$	$\text{—}$	= $\bar{e}$ (long or short)
$\text{—}$	= $\bar{i}$	$\text{—}$	= $\bar{i}$
$\text{—}$	= $\bar{o}$	$\text{—}$	= $\bar{o}$
$\text{—}$	= $\bar{u}$	$\text{—}$	= $\bar{u}$

The first vowel here ( $\bar{\text{—}}$ ) is not exactly  $\bar{a}$ , nor  $\bar{o}$ , but about Swedish  $\bar{a}$ , a sound between  $\bar{a}$  and  $\bar{o}$ . The same sign stands for the short  $\bar{o}$ .  $\bar{\text{—}}$  is an open  $\bar{e}$ , and may be long or short.

- In unstressed syllables appear vowels that are much shortened and reduced or "observed." One of these is either altogether silent, marking syllable division, or else an obscure vowel (*i*); its symbol is  $\text{—}$ . But, especially when associated with velar consonants, the reduced vowel is represented in a more definite value by adjoining this sign ( $\text{—}$ ) to the actual vowel sign; as,  $\text{—}$  = reduced  $\bar{a}$ ;  $\text{—}$  = reduced  $\bar{e}$ ;  $\text{—}$  = reduced  $\bar{o}$ .
- Five consonants have a special form when final. These forms in the Language Chart are enclosed in parenthesis-marks.
- n* indicates not exactly the soft vowel beginning of the English (as in *hour*), but rather the energetic initial of the German vowel (as in *ein*). Three other characters represent consonantal sounds more or less resembling *h*. These are: (1)  $\text{—}$ , which is approximately *h*; but at the end of a word, unless furnished with a dot (cp. Note 6), it is silent. (2)  $\text{—}$  usually = *h*; but at times it is much stronger, somewhat like an aspirated *g*, which may be transcribed as *gh*. (3)  $\text{—}$  is usually a strong velar *n* (Gen. Rem. 5), but is sometimes weakened to an *h*.
- $\text{—}$  and  $\text{—}$  (both = *s*), originally differing in value, are now identical.  $\text{—}$  (another *s*) differs from  $\text{—}$  (*ç*),  $\text{—}$  (*t*) from  $\text{—}$  (*t*), and  $\text{—}$  (*k*) from  $\text{—}$  (*k*), in that the first consonant in each pair is emphatic — enunciated with stronger articulation, and with compression of the larynx.
- The stopped consonants (*p*, *b*, *t*, *d*, *k*, *g*) and their corresponding spirants (*f*, *v*, *th*, *dh*, "voiced" *h*) are represented by the same signs, namely,  $\text{—}$ ,  $\text{—}$ ,  $\text{—}$ ,  $\text{—}$ ,  $\text{—}$ ; but the stops are distinguished by a dot placed within the sign; thus,  $\text{—}$  = *p*,  $\text{—}$  = *f*,  $\text{—}$  = *t*,  $\text{—}$  = *d*,  $\text{—}$  = *k*, etc. In the case of all the other consonantal letters, however, and also in the case of the six just mentioned when they stand between vowels, a dot thus placed is a sign merely of stronger enunciation (as if the consonant were doubled). Modern Jews pronounce  $\text{—}$  as *s*.

loq.] Extremely  
disagreeable.

The rain was pitiless, and the road abominable. TYNDALL *Glaciers* pt. 1, § 27, p. 218. [L. M. 1860.]

This word, formerly spelled *abominable*, owes its meaning to a mistaken derivation from the Latin *ob homine*, nway from or contrary to man. The error antedates the use of the word in English. [OF. *<L. obominabilis, <obominari>*; see ABMINARE, r.] SYN: abhorrent, heinous, detestable, execrable, foul, hateful, horrible, nauseous, odious, offensive, repulsive, vile, wicked. See NAR: CHIN: NAT: ANT: admirable, beautiful, charming, delectable, delightful, enjoyable, excellent, grateful, lovely, sweet, worthy. —a-bōm'i-na-bi(-e)-ness, n.—a-bōm'i-na-bi, adr.

a-bōm'i-na'tion, 1 a-bōm'i-nē'shan; 2 a-bōm'i-nā'shon, n. 1. Anything that excites disgust and hatred or loathing; a very detestable act or practice; anything vile or shamefully wicked; as, "the abominations of the heathen." [E.KINGS xxi, 2. 2. Any unpleasant factor or object. Bred up flaxseed and lime juice and quinine and willow stems into an abomination which was dignified as beer.]

KANE *Arctic Explorations* vol. II, ch. 5, p. 59. [L. M. 1856.]

3. Extreme disgust and hatred; loathing or aversion. See note under ABOMINABLE. a-bōm'i-na'tion, n.

SYN: abhorrence, annoyance, aversion, crime, curse, detestation, disgust, evil, execration, hatred, horror, iniquity, nuisance, offense, plague, shame, villainy, wickedness. Abomination (from the *L. ob omni*, a thing of ill omen) was originally applied to anything held in religious or ceremonial aversion; as, "that which is highly esteemed among men is abomination in the sight of God." [LUKE xvi, 15.] In common use it signifies something very much disliked or loathed or that deserves to be. Choice food may be an object of aversion and disgust to a sick person; vile food would be an abomination. A toad is to many an object of disgust; a foul sewer is an abomination. As applied to crimes, abomination is used of such as are especially brutal, shameful, or revolting; theft is an offense; infanticide is an abomination. —ANT: affection, appreciation, approval, benefit, blessing, delight, desire, enjoyment, esteem, gratification, joy, satisfaction, treat.

—abomination of desolation (*BD.*), a desecration of sacred precincts, as by the placing of the image of a bearded god in the temple (DAN. ix, 27; xi, 31, etc.); sometimes identified with some historic character, event, or thing.

Causing abortion. II. n. Anything that is used to cause abortion.

a-bōr't', a-bōr't'ment', n. Abortion.

a-bōr'tion, 1 a-bōr'shan; 2 a-bōr'shan, n. 1. The act of bringing forth young prematurely; in a loose use, miscarriage. In the human subject, a usually construed inflow and medicine, abortion is the expulsion of the product of conception at any period of gestation before the fetus becomes viable. In a strict sense it is "the expulsion of the ovum before the third month of gestation, as distinguished from miscarriage" (*F. Med. Dic.*). The period is variously lim-

ited by other authorities. The word *abortion* is also sometimes loosely used to mean criminal abortion.

2. The fruit of the act of aborting; hence, any misshapen or defective thing. 3. Biol. The partial or complete arrest of development of an organ. 4. Failure in anything during progress and before maturity, as in an enterprise or project. [*<L. abortio(n)-, <abortire>*, see ABORT.]

some larger object or whole; a summary or epitome, as of a book or document. 2. *Law*. A compendium; as, an abstract of a deed or title. 3. Anything viewed abstractly; a generality.

Women are always turning from the abstract to the individual and feeling where the philosopher only thinks.  
HARRIET B. STOWE *Minister's Wooing* ch. 2, p. 25. [c. 1859.]  
4. *Logic*. Any product of the mental act of abstracting; an abstract idea or term. 5. *Gram*. (1) A noun expressive of qualities or a general attribute; as, virtue, vice, deformity. (2) Especially, since the 13th century, such a noun formed from an adjective, as *goodness* from *good*, etc. 6. *Pharm*. A powder obtained by digesting a drug with some suitable solvent, such as sugar of milk, and so made that one part (of the abstract) represents two parts of the basic substance. An abstract is twice as strong as a fluid extract and tea times as strong as a tincture. *SYN*: see ABBREVIATION.—*abstract* of title (*Law*), a document containing a brief and orderly statement of the original grant and subsequent conveyances and encumbrances relating to the title and ownership of real estate.—*a. received and forwarded* (*Railroad*), a report of freight received and dispatched from a station.—*In the a.*, conceived apart from concrete relations or embodiment; in its general reference or meaning; abstractly.  
She has no idea of poverty but in the abstract.  
LIVINO *Sketch-book, The Wife* p. 32. [c. 1853.]

**ab-tract'ed**, 1 ab-strak'ted; 2 ab-sträkt'ed, *pa*. 1. Absent-minded. 2. Separated from everything else; apart; hence, abstract; difficult. 3†. Refined; ideal. *SYN*: absent, absent-minded, absorbed, heedless, inattentive, indifferent, listless, negligent, oblivious, preoccupied, thoughtless. As regards mental action, *absorbed*, *abstracted*, and *preoccupied* refer to the cause, *absent* or *absent-minded* to the effect. The man *absorbed* in one thing will appear *absent* in others. A *preoccupied* person may seem *listless* and *thoughtless*, but the really *listless* and *thoughtless* have not mental energy to be *preoccupied*. The *absent-minded* man is *oblivious* of ordinary matters simply through inattention or because his thoughts are elsewhere. One who is *preoccupied* is intensely busy in thought; one who is *absorbed* or *abstracted* may be merely in a reverie or day-dream. Compare synonyms for *ABSTRACT*, *a*.—*Ant*: alert, attentive, on hand, prompt, ready, thoughtful, wide-awake.—*ly*, *adv*.—*ness*, *n*.  
**ab-strac'tion**, 1 ab-strak'shon; 2 ab-sträkt'shon, *n*. 1. The act, process, or product of abstracting, or withdrawing the attention from other qualities or aspects of an object, in order to concentrate it upon some one quality or aspect. *Specif*: (1) The mental operation of separating qualities or attributes from the individual objects to which they belong, or of contemplating them as thus separated; as, the *abstraction* of whiteness from white objects. Abstraction is the groundwork of classification, which is impossible without it.  
The act of analytic attention by which that element in each of these objects which is like its fellow in every other way, is separately observed or noticed, is usually called *abstraction*, because the mind draws it out from the parts or percepts.  
FORSTER *Human Intellect* pt. iii, ch. 2, p. 389. [c. 1890.]  
(2) The condition of mind which results in its being withdrawn from certain objects, or parts or attributes of objects, and its being fixed upon some other objects, parts, or attributes.  
*Abstraction* . . . is merely a negation to one or more objects, in consequence of its concentration on another.  
HAMPTON *Metaphysics* lect. xxvii, p. 469. [c. 1859.]  
The precise nature of the mental activity or mental state called *abstraction* has been much debated. Many of the older writers on logic defined it as the qualities or attributes of the objects could somehow be withdrawn from the objects themselves, when considered as a number of individuals having something in common, and so be compounded into a general notion of quality or attribute. It is now commonly recognized, however, that the act of abstraction consists in the withdrawal of attention. Such abstraction is necessary to the formation of those mental schemata, or conceptions, for which words become the vehicle, as it were.  
(3) In a wide sense, the formation of a conception. THOMSON *Laws of Thought* pt. i, pp. 95, 96. [c. 1863.]  
2. A product of the mental process of abstracting; a concept or notion; as, beauty is an *abstraction*.  
*Abstractions*, under the glowing genius of the orator, acquired . . . a power to thrill the blood.  
WEBSTER *Works*, *Memoir* vol. i, ch. 6, p. 96. [c. 1858.]  
3. A conception existing only in the mind and answering to no reality; something visionary.  
The general advantage is an *abstraction* which concerns only an abstraction called humanity.  
W. B. LUTZ *Right and Wrong* ch. 2, p. 50. [c. 1891.]

4. The act or process of separating, taking, or removing, especially secretly or dishonestly; purloining. 5. Absence of mind; obliviousness of immediate surroundings, as from attention concentrated on something else. 6. Separation from worldly objects, pursuits, and enjoyments; seclusion of life, as by the hermit. 7. *Geol*. The draining of water from a stream by another having more rapid corrodent action. 8†. *Chem*. Separation of a constituent from a compound or mixture by distillation.—*Platonic abstraction*, the mystical self-forgetfulness which leads the philosopher into a region of thought and spirit absolutely above his present condition. R. A. VAUGHAN *Hours with the Mystics* 4th ed., vol. i, p. 19.—*ab-strac'tion-al*, *a*.—*ab-strac'tion-ist*, *n*. One given to abstractions; an idealizer.—*ab-strac'ti-ous*, *a*.  
*Chem*. Produced by distillation.  
**ab-strac'tive**, 1 ab-strak'tiv; 2 ab-sträkt'iv, *a*. 1. Of, *ab-strac'tiv*, pertaining to, or tending to abstraction; having the power of abstraction; epitomizing. 2. Having the nature of abstraction or an abstract. 3†. *Abstrac-tiv-ous*—*ab-strac'tiv(e)-ly*, *adv*.—*ab-strac'tiv(e)-ness*, *n*.  
**ab-strac't-ly**, 1 ab-strak't-ly; 2 ab-sträkt-ly, *adv*. In an abstract manner. (1) In the abstract. (2) In an epitome.  
**ab-strac't-ness**, 1 nes; 2 -nēs, *n*. The quality of being abstract; separateness from the actual concrete.  
**ab-strac't-hent**, 1 ab-strak't-hent; 2 ab-sträkt-hent, *a*. Abstracting; tending to draw away; abstract.  
**ab-strich**, 1 äp'strich; 2 äp'strich, *n*. [G]. The impure oxide that forms as a scum on molten lead in cupellation.  
**ab-stric't-ed**, 1 ab-strik't-ed; 2 ab-sträkt-ed, *a*. 1. Bot. Separated by abstraction, as the spores of some fungi. 2†. Not bound; loosened.  
**ab-stric't-ion**, 1 ab-strik'shon; 2 ab-sträkt'shon, *n*. 1. Bot. A process of spore-formation in certain fungi, in which the sporophore becomes constricted by septa at the place of division. 2†. A loosening. [*< ab- + L. stric'tio(n)-, < stringo, hind.*]

**ab-struge**, *tr*. To unbind or loosen.  
**ab-strude**, *tr*. To thrust away.  
**ab-stru'e**, 1 ab-stru'e; 2 ab-stru'e, *a*. 1. Remote from the usual course of thought; hard to be understood; dealing with matters difficult to be understood; as, "paths of *abstruse* dogma." M. ARNOLD *Lucretius*, ch. 1, p. 41. 2†. Hidden; concealed. prickles. 2. Of or pertaining to the *Acanthocephalus*. *a-can'thac'*. A plant of the acanthus family. — *Ae'-an-thar'-chus*, *n. Ich.* A genus of percoid fishes of the family *Centrocichla*, including the dusky mud-sunfish or mud-hass (*A. pomotis*). — *Ac'-an-tha'-ri-a*, *n. pl. Protoz.* A legion or order of radiolarians having a simple membrano bounding the minutely perforated central capsule, which has a skeleton of spicules radiating from a central point within and is destitute of phæodium around it. — *ac'-an-tha'-ri-an*, *a. & n.* — *Ac'-an'-thas'-ter'-i-na*, *n. pl. Echin.* A subfamily of echinasteroid starfishes. — *Ac'-an'-thas'-ter*, *n. (t. g.)* — *A-can'-tho-phyl'-de*, *n. pl. Crust.* A family of deep-sea monacarpidean *Macrura* with a compressed body and carinated head. — *Ac'-an'-theph'y-ra*, *n. (t. g.)* — *ac'-an'-theph'y-rid*, *n.* — *ac'-an'-theph'y-roid*, *a.* — *A-can'-ther-pes'tes*, *n.* A genus of fossil myriapods of the Carboniferous era, measuring about one foot in length, having branching spines and possibly also lateral branchial pores. — *ac'-an'-thich'-thyl-o'sis*, *n. Pathol. Ichthyosis.* — *Ac'-an'-thil'-de*, *n. pl. Entom.* A family of hugs. — *A-can'-thil-a*, *n. (t. g.)* — *A-can'-thil-dæ't*. — *a-can'thin*, *n. Protoz.* A horny substance constituting the skeleton or spicules, *n.* in certain radiolarians. — *ac'-an'-thin'ic*, *a-can'thin'-ous*, *a.* — *a-can'thine*, 1 *a-can'thin*; 2 *a-can'thin*, *a. 1. Of*, pertaining to, or like an acanthus; decorated with the acanthus leaf. 2. Like or having spines. [*L. acanthinus*, *< Gr. akanthinos*, thorny, *< akantha*; see *AEANTHA*.]

*a-can'thi-on*, 1 *a-can'thi-on*; 2 *a-can'thi-on*, *n.* A cranio-metrical point. See CRANIO-METRY. [*Gr. okanthion*, dim. of *akontha*, spine.]

*A-can'thil-st'il'-dæ*, 1 *a-can'thi-sit'-il*; 2 *a-can'thil-sit'-il-dæ*, *n. pl. Ornith. The Xentidae.*

*Ac'-an'-thist'-i-us*, 1 *ak'-an'-thist'-i-us*; 2 *ac'-an'-thist'-i-us*, *n. Ich.* A genus of fishes at the family *Serronidae*, frequenting South-American and other waters, and related to *Plectropomus*.

*a-can'thite*, 1 *a-can'thoit*; 2 *a-can'thit*, *n. Mineral.* An iron-black silver sulfid (AgS), crystallizing in the orthorhombic system.

*a-can'tho-*, 1 *a-can'tho-*; 2 *a-can'tho-*. From Greek *akanthia*, a spine, point, prickle, thorn; a combining form. — *Ae'-an'tho'-a-tis*, *n.* A fossil genus of raioid fishes, found in the Miocene Tertiary of France and Wurttemberg. [*C.*] — *A-can'thob-del'i'-dæ*, *n. pl. Helminth.* A family of leeches with a bundle of hooks on each side of the pointed snout. — *A-can'thob-del'i-a*, *n. (t. g.)* — *a-can'thob-del'i'-fid*, *n.* — *a-can'thob-del'-foid*, *a.* — *ac'-an'thob'-o-lus*, *n. Conch.* The *Anthobranchiata*. — *a-can'tho-car'-pous*, *a.* Having prickles or spines on the fruit. — *ac'-an'tho-ceph'-a-la*, *n. pl. Helminth.* An order of acematelminth worms without a mouth or lateral canal, but with a retractile proboscis covered with hooks, comprising *Echinorhynchida*. They are parasitic, and become sexually mature in the vertebrate which has swallowed an invertebrate containing the immature form. — *A-can'tho-ceph'-a-lli-*. — *a-can'tho-ceph'-a-lan*, *a. & n.* — *A-can'tho-ceph'-a-ll'-na*, *n. pl. Entom.* A division of coreoid insects with a blade-like process on the forehead and thick coarsely toothed femora; including large dark-brown hugs of the Gulf States. — *A-can'tho-ceph'-a-lus*, *n. (t. g.)* — *a-can'tho-ceph'-a-lous*, *a.* Spiny-headed; of or pertaining to the *Acanthocephalo*. — *A-can'tho-cer'-a-ti'-dæ*, *n. pl.* A family of ammonites in the Cretaceous series, having more or less transversely ribbed shells, discoidal or in loose whorls. — *Ac'-an'tho-cer'-as*, *n. (t. g.)* — *n-ean'-tho-cho'-to-don*, *n. Ich.* A genus of chaetodontoid fishes; the East-Indian butterfly-fishes. — *A-can'tho-chi'-as'-mide*, *n. pl. Protoz.* A family of radiolarians with opposite spines, grown together in the center, in pairs. — *a-can'tho-chi'-as'-mild*, *n.* — *a-can'tho-chi'-as'-mold*, *a.* — *A-can'tho'-chil'-a*, *n. pl. Helminth.* A family of Paleozoic polyzoons with branching polyzoary, poriferous on one side only. — *A-can'tho-chil'-a*, *n. (t. g.)* — *ac'-an'thoc'-il'-dæ*, *n.* — *ac'-an'thoc'-il'-dold*, *a.* — *ac'-an'thoc'-il'-dous*, *a. Bot.* Having thorny branches. — *A-can'tho-cin'-thi'-dæ*, *n. pl. Ich.* A Pacific family of biennial fishes with many spines in the dorsal and anal fins. — *Ac'-an'thoc'-il'-nus*, *n. (t. g.)* — *ac'-an'thoc'-il'-nid*, *n.* — *ac'-an'thoc'-il'-noid*, *a. & n.* — *a-can'tho-cyc'-il'-dæ*, *n. pl. Crust.* A family of caneroidean crabs with a suborbicular or narrow carapace and obsolete external antennae. — *A-can'tho-cy'-clis*, *n. (t. g.)* — *a-can'tho-cy'-clid*, *n.* — *a-can'tho-cy'-clid*, *a.* — *a-can'tho-cyst*, *n. Helminth.* A large cell or vesicle of the proboscis of nemertean worms, which contains several calcareous stylets. — *Ac'-an'thoc'-de-a*, *Ac'-an'tho'-di'-l*, *n. pl. Same as ACANTHODINEA.* — *Ac'-an'thod'-il'-dæ*, *n. pl. Ich.* A family of *Acanthodidae* with a compressed body and spines in front of all the fins except the caudal. — *Ac'-an'thod'-il'-des*, *n. (t. g.)* — *A-can'thod'-il'-e*, *a.* — *ac'-an'thod'-il'-an*, *a. & n.* — *a-can'thod'-il*, *n.* — *a-can'thod'-il-dæ*, *a. & n.* — *A-can'thod'-il'-dæ*, *n. pl. Ich.* An order of fossil (Devonian and Carboniferous) fishes, intermediate between the sharks and true fishes, with spines to the paired fins, a cartilaginous skeleton, no opercula, heterocercal tail, and placoid scales. — *A-can'tho'-di'-nl'*. — *a-can'tho'-di'-l'-dæ*, *a. & n.* — *A-can'tho'-di'-l'-dæ*, *n. pl. Conch.* A subfamily of polycoeloid sea-slugs without dorsal appendages. — *A-can'tho'-di'-lis*, *n. (t. g.)* — *a-can'tho'-di'-l'-dæ*, *a.* — *ac'-an'tho'-di'-l'-dæ*, *n. pl. Helminth.* A family of plectonephric earthworms with light setae and two pairs of prostomes to the somite. — *Ac'-an'thod'-il'-foid*, *a. (t. g.)* — *ac'-an'thod'-il'-id*, *n.* — *ac'-an'thod'-il'-old*, *a.* — *A-can'tho-ga-nol'-de-l*, *n. pl. Ich.* A superorder of fishes coextensive with *Acanthodotidae*. — *a-can'tho-ga-nol'-de-an*, *a. & n.* — *A-can'tho-gor-gi'-l'-dæ*, *n. pl. Zooph.* A family of antipatharian corals with cells on all sides of the branches and with elongate setaceous spines in the margin. — *A-can'tho-gor-gi'-l*, *n. (t. g.)* — *A-can'tho-gor-gi'-l'-dæ't*. — *a-can'tho-gor-gi'-l*, *n.* — *a-can'tho-gor-gi'-old*, *a.* — *a-can'thoid*, *a.* Spiny. — *Ac'-an'thal'-man*, *n.* A genus of plants of the leadwort family (*Plumbaginaceae*), bearing rose-colored flowers. — *ac'-an'thal'-o-gy*, *n. Biol.* The science or study of the nature and structure of spines. — *a-can'tho'-l'-dæ*, *a.* Of or pertaining to spines, or derived from studying them. — *A-can'tho'-lon'-chl'-dæ*, *n. pl. Protoz.* A family of acantharian radiolarians with 20 unequal radial spines, the two equatorial spines largest. — *A-can'tho'-lon'-cha*, *n. (t. g.)* — *A-can'tho'-lon'-chl'-dæ't*. — *a-can'tho'-lon'-chl'id*, *n.* — *a-can'tho'-lon'-chold*, *a.* — *ac'-an'thol'y'-sis*, *n.* A wasting disease of the pickle-cells. — *ac'-an'tho'-ma*, *n.* A morbid overgrowth of the pickle-cell layer of the epidermis. — *A-can'tho-mer'-il'-dæ*, *n. pl. Entom.* A family of large American dipterous insects, of which there are three genera — *Acanthomera*, *Pantophthalmus*, and *Rhaphiorhynchus* — resembling the gadflies. — *A-can'tho-met're*, *n. pl. Protoz.* 1. An order of acantharian radiolarians without complete latticed shell. 2. The *Acantharia* as a whole. — *A-can'tho-met're-æ't*. — *a-can'tho-met'-*

an, a. & n.—*a-can*'-tho-met're-an, a. & n.—*a-can*'-tho-met'rous, a.—*A-can*'-tho-met'rīd-a, n. pl. *Protoz.* 1. The order *Acanthometra*. 2. The family *Acanthometridae*, *a-can*'-tho-met'rī-dan, a. & n.—*A-can*'-tho-met'rīd-e, n. pl. *Protoz.* A family of acanthometrous radiolarians variously limited. *A-can*'-tho-met'rā, n. Having spines on the feet. *a-can*'-tho-po'dī-oust; *ne*'an-tho-po'dī-oust. II. n. An insect, as a beetle with spiny feet.—*a-can*'-tho-po'dī-ous, a. *Bot.* Having spines on the stalk of the leaf or pedicel of the flower.—*a-can*'-tho-po'mā-tous, a. Having a thorny or serrated operculum.—*a-can*'-tho-pore, n. A tubiform spine, as in certain fossil polyzoans.—*a-can*'-tho-pō-s, a. *Zool.* Having thin eyelids furnished with spinous processes. F. M. D. *Ac*'-an-tho-ter-i-l, n. pl. *Ich.* An order or suborder of teleost fishes comprising acanthopterygians with separate lower pharyngeal bones.—*ac*'-an-tho-tere, n.—*ac*'-an-thop'ter'an, a. & n.—*ne*'an-tho-ter-ous, a. 1. Having spines on the wings, as the cassowary and Jacana. 2. Having spines in the fins; of pertaining to or having the characteristics of the *Acanthopteri* or *Acanthopterygii*.—*A-can*'-thop-ter-yg'i-l, n. pl. *Ich.* An order or suborder of teleosts, variously limited, containing all or most fishes with spines in the fins, as the mackerel, hake, etc. *A-can*'-thop-ter-yg'i-a;—*a-can*'-thop-ter-yg'i-tan, a. & n.—*a-can*'-thop-ter-yg'i-ous, a.—*ac*'-an-tho'sis, n. Disease of the prickle-cell layer of the epidermis. F. Med. [*Ac*'-an-tho-sphē'note, a. *Echin.* Descriptive of the spines of sea-urchins, which, in cross-section, show cancellar parts alternating with strips of porous tissues and radiating from a median axis.—*a-can*'-thosphere, n. *Bot.* A spicule occurring in the cells of characean plants, as the *Nitella*.—*A-can*'-tho-staur'i-d-e, n. pl. *Protoz.* The *Quadrilobida*.—*A-can*'-tho-stig'ma, n. *Bot.* A genus of *Fungi imperfecti*, chiefly saprophytic, with small bristly perithecia on the surface, and hyaline spindle-shaped septate spores. *a. parasiticum*, a European species, issued attack the silversail (*Abies nigra*).—*A-can*'-tho-tei-nī'd-e, n. pl. *Crust.* A carboniferous family of malacostracans representing the suborder *Sincroidea*. *A-can*'-tho-teif'on, n. (t. g.)—*a-can*'-tho-teif-on-id, n.—*a-can*'-tho-teif-on-soid, a.—*A-can*'-tho-the'cā, n. pl. *Arch.* The *Lingatulina* or *Pentastomidae*.

-*can*'-thous, 1 *a-kān*'thus; 2 *a-cān*'this, a. Spinuous, *a-can*'-tho-zō'id, 1 *a-kān*'(tho-zō'id; 2 *ā-cān*'-tho-zō'id, n. *Helminth.* In some cestoid worms, as *Dipylidium caninum*, the narrowed posterior part of the embryo upon which hooks are produced.

*ac*'-an-thū'rīd-e, 1 *ak*'en-thū'rī-dī; 2 *āc*'an-thū'rīd-e, n. pl. *Ich.* The *Teuthididae*. *Ac*'-an-thū'rūs, n. (t. g.) [*Gr.* *akantho*, spica, + *oura*, tail.]—*ne*'an-thū'rīd, n.—*a-cr*'-an-thū'rōid, a. & n.

*a-can*'-thus, 1 *e-kān*'thus; 2 *a-cān*'this, n. 1. *Bot.* (1) [A] A genus of perennial herbs of the *Acanthus* family (*Acanthaceae*), of some of the warmer regions of the Old World, having large and handsome dentate or spinous leaves. (2) Any plant of the genus *Acanthus*. *Arch.* A more or less conventionalized representation of an *Acanthus*-leaf; characteristic of the Corinthian capital. [L., < Gr. *akanthos*, < *akantha*; see ACANTHA].

-*a-can*'-thus-deaf', n. See ACANTHUS, 2.

*a-can*'-ti-conc, n. *Mitral.* Same as AKANTIEONE. *a-can*'-ti-conc;—*a-can*'-ti-con-lēt.

*a-ca*'-pel'lā, 1 *t̄ka*-pe'l-lā; 2 *ā* ca-pe'l'lā. [It.] 1. In chapel or church style, f. e., sung without instrumental accompaniment. 2. In church time, f. e., with four half notes in each bar. *a-ca*'-pel'lā.

*a-ca*'-pul'su-lār, 1 *a-kap*'siu-lar; 2 *a-cāp*'sū-lār, a. *Bot.* *ac*'-ap-pul'su-lā, 1 *ak*'o-pu'l'sio; 2 *ā* ca-pul'sa, n. A scapeot on the west coast of Mexico.

*a-ca*'-rā, 1 *a-kār*'rā; 2 *a-cār*'rā, n. [Bras.] A cleithroid fish (geocara *Acara*, *Geophagus*, etc.), resembling the North-American sunfish.

*a-car*'dī-a, 1 *a-kār*'dī-a; 2 *a-cār*'dī-a, n. *Terat.* 1. Absence of a heart. 2. An cardiacus. [< Gr. *kardios*, priv. + *kardia*, heart.]—*a-car*'dī-ac, a.—*ac*'-ar'dī-a-cē, n. [-ci, 1 -sal; 2 -ci, pl.] *Terat.* A fetal monstrosity without a heart; also, the acardiac parasite in a double monster. *a-car*'dī-us†.

You never know till you try to reach them how accessible men are. BEECHER in *Proverbs from Plymouth Pulpit* p. 16. [A. 1857.] [*L. L. accessibilis; < L. accedo; see ACCENE.*]

**Syn.**: approachable, attainable, civil, companionable, complaisant, conversable, courteous, easy, familiar, free, friendly, obliging, sociable, unconstrained. **Accessible** is a synonym of attainable only in reference to places, where it is the stronger term, denoting a certain readiness of access. Points in the polar regions are attainable by dog-sledges, which are not accessible by ship, road, or path. See FRIENDLY; POLITE.—**Ant.**: austere, churlish, cold, difficult, distant, harsh, inaccessible, reserved, surly, unapproachable, unattainable, uncivil, unobtainable.—**Prep.**: accessible to visitors; by a foot-path.—ac-cēs'si-ble-ly, n.—ac-cēs'si-ble-ly, adv.

**Syn.**: abetting, acceding, additional, additive, assistant, assisting, auxiliary, complementary, conducive, contributory, contributive, helpful, helping, secondary, subsidiary, supplemental. See INCIDENTAL.—**Ant.**: cumbersome, disturbing, essential, immanent, incorporate, inherent, irrelevant, superfluous, superior, supererogatory, useless.—**Prep.**: to, —accessory bud, see under bud.—a. fruit, an antho-

carpous fruit; one in which some additional part or organ is united with the ovary.—a. mineral, a. nucleus, etc., see under nouns.—a. parts, accompaniments.—a. tones (Mus.), harmonies.—ac-cēs'so-ri-ly, adv.

**ac-cēs'so-ry**, n. [Ries, 1-riz; 2-riz, pl.] 1. A person or thing that aids subalternately the principal agent; an adjunct; accompaniment. 2. Law. A person who, tho not present, is concerned, either before or after, in the perpetration of a felony less than treason. See ACCESSARY. [*L. L. accessorius; < L. accedo; see ACCENE.*]

**Syn.**: abettor or abettor, accomplice, ally, assistant, associate, attendant, coadjutor, colleague, companion, confederate, follower, helper, henchman, participant, partner, retainer. **Colleague** is used always in a good sense, associate and coadjutor generally so; ally, assistant, associate, attendant, companion, helper, either in a good or a bad sense; abettor, accessory, accomplice, confederate, almost always in a bad sense. Ally is often used of national and military matters, or of some other connection regarded as great and important; as, allies of despotism. **Colleague** is applied to civil and ecclesiastical connections; members of Congress from the same State are colleagues, even tho they may be bitter opponents politically and personally. An Associate Justice of the Supreme Court is near in rank to the Chief Justice. A surgeon's assistant is a physician or medical student who shares in the treatment and care of patients; a surgeon's attendant is one who rolls handgates and the like. **Follower**, **henchman**, **retainer** are persons especially devoted to a chief, and generally bound to him by necessity, fee, or reward. **Partner** has come to denote almost exclusively a business connection. In law, an abettor (the general legal appellation) is always present, either actively or constructively, at the commission of the crime; an accessory never. An accomplice is usually a principal; an accessory never. If present, tho only to stand outside and keep watch against surprise, one is an abettor, and not an accessory. At common law, an accessory implies a principal, and can not be convicted until after the conviction of the principal; the accomplice or abettor can be convicted as a principal. **Accomplice** and **abettor** have nearly the same meaning, but the former is the popular, the latter more distinctively the legal, term. See APPENDAGE; AUXILIARY.—**Ant.**: adversary, antagonist, betrayer, chief, commander, enemy, foe, hinderer, instigator, leader, opponent, opposer, principal, rival.—**Prep.**: an accessory to the crime; before or after the fact; the accessories of a figure in a painting.—accessory after the fact, a person who, knowing a felony to have been committed, receives, relieves, comforts, conceals, or assists the felon.—a. before the fact, one who, before the act, instigates, aids, or encourages another to commit a felony, but is not present at its perpetration.

**ac-clac'ca-tu-ra**, 1 a-chlak'-ko-tu-ra; 2 ðe-çlak'-cä-tu-rä, n. [It. Mus.] 1. A short clear

appoggiatura. 2. An ornament still retained in some organ-music, in which the principal note is sustained while the note below is struck for an instant only.

**ac-cla-dence**, 1 ak'-clä-dens; 2 ðe-çclä-deng, n. 1. A small book containing the rudiments of a grammar. 2. Gram. The part of etymology that treats of the accents or inflections of words. 3. The rudiments, as of any art or science. [Cor. of accents, pl. of ACCENT, as if < L. accedentia, < accedent(-); see ACCENT.]

**ac-cla-dence**, n. Chance; mishap; fortuity. **ac-cla-den-cy**, [Rare].

**ac-cla-dent**, 1 ak'-clä-dent; 2 ðe-çclä-dent, n. 1. Anything that happens; an occurrence; event. Especially: (1) Anything occurring unexpectedly, or without known or assignable cause; n. contingency; as, accidents of war.

Happy accident turns holy art.

E. B. BROWNING *Casa Guidi Windows* pt. i, st. 9.

(2) Any unpleasant or unfortunate occurrence that causes injury, loss, suffering, or death. (3) Med. An unfavorable or unanticipated symptom. 2. The assumed explanation of any casual event; chance; fortune; as, it came by accident. 3. Any circumstance, accompaniment, or attribute regarded as present by chance, and therefore non-essential. 4. Logic. (1) Any feature, element, or accompaniment of an object not essential to the conception of it.

Logic has sometimes divided accidents into separable, or that of which an individual can be deprived without destroying its individuality, and inseparable, or that essential to the nature of the individual as such, but not essential to the definition of the genus to which it belongs. (2) In a wider sense, anything, whether essential or not, considered as belonging to a subject or substance and predicable of it; an ascript. 5. Gram. An inflection, such as those of gender, number, etc. 6. Her. Any unessential point or mark in a coat of arms. [*L. L. accedent(-), ppr. of accedo, happen, < ad, upon, + cado, fall.*]

**Syn.**: adventure, calamity, casualty, chance, contingency, disaster, fortune, hap, happening, hazard, incident, misadventure, mishap, possibility. An accident is that regular course without any one's direct intention; a chance that which happens without any known cause. If the direct cause of a railroad accident is known, we can not call it a chance. To the theist there is, in strictness, no chance, all things being by divine causation and control; but chance is spoken of where no special cause is manifest; "By chance there came down a certain priest that way." *Luke* x. 31. We can speak of a game of chance, but not of a game of accident. "Accident is said ordinarily of things that have of accident, a chance of things that are to be. That is an accident which is done without intention; to be a chance which can not be brought about by the use of means." CRABB *Eng. Synonyms*. An incident is viewed as occurring in the regular course of things, but subordinate to the main purpose, or aside from the main design. Fortune and chance are nearly equivalent, but chance can be used of human effort and endeavor as fortune can not; we say "he has a chance of success," or "there is one chance in a thousand," where we could not substitute fortune; as, personified, Fortune is regarded as having a fatal purpose. Chance as purposeless; we speak of *blind Fortune*, *blind Chance*; "Fortune favors the brave." The slaughter of men is an accurate controlling force. The slaughter of men is an accurate controlling force. The slaughter of men is an accurate controlling force.

**Syn.**: abetting, acceding, additional, additive, assistant, assisting, auxiliary, complementary, conducive, contributory, contributive, helpful, helping, secondary, subsidiary, supplemental. See INCIDENTAL.—**Ant.**: cumbersome, disturbing, essential, immanent, incorporate, inherent, irrelevant, superfluous, superior, supererogatory, useless.—**Prep.**: to, —accessory bud, see under bud.—a. fruit, an antho-

dinance, plan, preparation, provision, purpose.—**Prep.**: the accident of birth; an accident to the machinery.

**ac-cl-den'tal**, n. 1. Anything happening or appearing accidentally, or by chance; a casual, incidental, or non-essential feature or property. 2. Mus. A sharp, flat, or natural, elsewhere than in the signature-place.

The effect of an accidental, in music, is confined to the measure in which it occurs. The characters thus used are ♯, b, ♯, or x, b, ♯, b. The double sharp is used upon a line or space already sharped (actually or by implication), and the double flat on one already flatted. The compound characters ♯, ♯, for which there are no names, are used respectively on a double-sharped and double-flatted degree of the staff to cancel the effect of one sharp or flat.

**Syn.** acuteness, cleverness, discernment, insight, keenness, penetration, perspicacity, sagacity, sharpness, shrewdness. *Sharpness*, *acuteness*, and *insight*, however keen, and *penetration*, however deep, fall short of the meaning of *acumen*, which implies also ability to use these qualities to advantage. There are persons of keen *insight* and great *penetration* to whom these powers are practically useless. *Acumen* is *sharpness* to some purpose, and belongs to a mind that is comprehensive as well as keen. *Quickness* is a prenal aptitude for study or learning. *Insight* and *discernment* are applied to the judgment of character; *penetration* and *perspicacity* to other subjects of knowledge. *Sagacity* is an uncultured skill in using quick perceptions for a desired end, generally in practical affairs; *acumen* may increase with study, and applies to the most erudite matters. *Shrewdness* is *keenness* or *sagacity*, often with a somewhat evil bias, as ready to take advantage of duller intellects. *Perspicacity* is the power to see clearly through that which is difficult or involved. We speak of the *acuteness* of an observer or a reasoner, the *insight* and *discernment* of a student, a clergyman, or a merchant, the *sagacity* of a hound, the *keenness* of a debater, the *shrewdness* of a usurer, the *penetration*, *perspicacity*, and *acumen* of a philosopher.—**Ant.** bluntness, dulness, obtuseness, stupidity.

Adoration of the Magi.

Relief on the pulpit at the baptistry, Pisa, by Nicola Pisano.

The act of adoring as pertaining to the Deity; worship of God or special reverence given to some inferior person or object related to God; ns, the adoration of the cross, host, Virgin Mary, or saints; not now used of inferior persons.

Wonder . . . enters largely into the adoration and worship which we pay to God. *McCash Psychology* bk. ii, ch. 2, p. 119, in 1887. 2. An emotion composed of profound admiration, affection, and the feeling of devotion, leading to acts of homage. 3. Formerly, a method of electing a pope by an act of homage from two-thirds of the cardinals present; now, the homage given by the cardinals after his election. 4. *Art & Archeol.* A representation of homage to or worship of a person or object, especially of a divine person, as the Infant Savior, a-dorement;—adoration of the cross (*R. C. Ch.*), a service held on Good Friday, when the cross is adored by both clergy and congregation. *SYN:* see PRAYER; REVERENCE. a-do'r-er, n. To adorn. *ADORN*, 1 a-do'r; 2 a-do'r, n. 1. To furnish or deck with ornaments; hence, to make beautiful or attractive; decorate; as, to adorn a bride. 2. To be an ornament to; add beauty, luster, or honor to; ornament; as, noble women adorn their age and land. a-do'r-na'te, n.

At church, with meek and unaffected grace, His looks adorn'd the venerable place. *CONGREVE Deserted Village* l. 178.

[*< F. adorne, < L. adorno, < ad, to, + orno, deck.* *SYN:* beautify, bedeck, deck, decorate, embellish, garnish, gild, illustrate, ornament. To embellish is to brighten and enliven by adding something that is not necessarily or very closely connected with that to which it is added; to illustrate is to add something so far like in kind as to cast a sidelight upon the principal matter. An author embellishes his narrative with fine descriptions, the artist illustrates it with beautiful engravings, the binder gilds and decorates the volume. *Garnish* is of a lower plane; as, the feast was garnished with flowers. *Deck* and *bedeck* are commonly said of apparel; as, a mother bedecks her daughter with silk and jewels. To adorn and to ornament imply dignity to add that which makes anything beautiful and attractive, but ornament is more exclusively on the material plane. To ornament is to add what really confers beauty; as, the gateway was ornamented with delicate carving. Adorn is more lofty and spiritual, referring to a beauty which is not material, and can not be put on by ornaments or decorations, but seems in perfect harmony and unity with that to which it adds grace. We say of some admirable scholar or statesman, "he touched nothing that he did not adorn."—*ANTI:* deface, deform, disfigure, mar, spoil.—*PREP:* with.—a-do'r-na'te, [*< AD-; see ORAL.*]—a-do'r-na'te, n. 1. ad-verb, 1 ad-verb; 2 ad-verb, n. *Gram.* That part of speech used to modify verbs, adjectives, or adverbs. Adverbs denote the way or manner in which an action takes place, or the relations of place, time, manner, quality, and number, or a qualifying of an attribute. Some adverbs are merely particles and indeclinable, as *now*, *here*, *so*; while others are not merely particles, but are capable of inflection to indicate degrees of comparison, as *soon*, *sooner*, *soonest*, *brightly*, *more brightly*, *most brightly*. See ADJECTIVE. The want of adverbs in the *liad* is very characteristic.

COLEMAN *Table Talk* July 9, 1832.

2. Adoption or association in the same society or family. 3. *Law.* The determining of a child's paternity or parentage. 4. The determination of origin or descent.

*affinal*, 1. *affinal*; 2. *affinal*; a. [Rare.] 1. Derived from the same source. 2. Related by marriage, or otherwise than by blood. [*L. affinis*, < *ad*, to, + *finis*, end.]

*affine*, v. *Chem.* To refine. *affinage*, n. A refining. *affine*, a. 1. Related by marriage. 2. Akin.

*affine*, n. 1. A relative by marriage. 2. A kinsman.

*affined*, 1. *affined*; 2. *affined*; pa. 1. Joined by artificial ties; allied; akin; confederated; wedded; related by marriage; contrasted with *consanguine*. 2. *Zool.* Having similar structural characters; having natural affinity. 3. [Archaic.] Under obligation, due to some close relation.

*affinity*, 1. *affinity*; 2. *affinity*; n. [Rare.] Connection or relation by affinity.

To partake of . . . qualities by affinity and heredity.

Howells *Modern Instance* ch. 21, p. 258. [L. u. & c. 1889.]

*affinity*, 1. *affinity*; 2. *affinity*; n. [-TEE, 1. -ty; 2. -tis, pl.] 1. Any connection through natural attraction or causal relation. Especially: (1) Any natural drawing, inclination, liking, or friendliness; as, a strange *affinity* attracts opposite natures.

Perceptive wisdom that has not been vivified by life has in itself no *affinity* for life.

HOLLAND *Gold-Foil* ch. 1, p. 12. [s. 1869.]

(2) Any close relation or agreement; likeness in nature, character, taste, etc. (3) A Platonic or spiritual attraction held to exist between certain persons, especially between those of opposite sexes; also, the person exerting such attraction. (4) *Chem.* The property or force by which differing elements or groups of elements, when brought into contact, unite to form a new compound; chemical attraction; chemism. (5)† Companionship; intimacy. (6)† Vicinity; nearness. 2. Any connection through common origin. (1) Loosely, relationship or kinship by consanguinity, especially between races; collectively, relatives; kindred. (2) *Biol.* Structural likeness in organisms, indicating connection with or descent from a common stock; also, the relation based upon this likeness. (3) *Philol.* Structural likeness in languages, indicating a common origin.

"The Gothic and Celtic had the same origin with the Sanskrit. The old Persian may be added to the same family." But how was that affinity to be explained?

MILLER *Science of Lang.* first series, lect. iv, p. 160. [s. 1875.]

3. Connection through certain relations formed, as by church or state. Especially: (1) Relationship through marriage (as opposed to blood-relationship), as of a husband to his wife's relatives and vice versa; collectively, kindred by marriage; as, Solomon made *affinity* with Hiram, king of Tyre. (2) R. C. Ch. The relationship between a man and his wife's relatives and between a woman and her husband's relatives. 4. *Geom.* A relation between two figures such that one can be made congruous with the other by extending its parts in one direction in a constant proportion. 5. *Psychol.* That quality or relationship of ideas which renders them capable of being associated, as similarity, contiguity, etc. 6. [Colloq., U. S.] A soul-mate; mistress. [*F. affinité*, < L. *affinitas* (t-s), < *affinis*; see *AFFINAL*.]

**Syn:** consanguinity, kin, kindred, relationship. *Consanguinity* is relationship by blood; *affinity* is relationship by marriage; either may be termed *kin* or *kindred*. In biology and philology, *affinity* may denote race-relationship or structural likeness. See *ANALOGY*; *KIN*.—*genetic affinity* (*Biol.*), affinity or relationship owing to similar origin. *genetic relationship*;—*predisposed* a. (*Chem.*), the cause, formerly assumed, of a change occasioned by a substance possessing an attraction or affinity for a product which may be found as a sequence of the change.—*affinity* (ta-tiv), a. *affirm*, 1. *affirm*; 2. *affirm*; v. I. 1. To declare or state positively; assert; make (a statement) and maintain (it) to be true; maintain; declare to be fact; over; ns, to *affirm* one's innocence; to *affirm* a falsehood.

It is impossible for the mind to affirm anything of that which it knows nothing. *Hobbes System*, *Theol.* vol. i, ch. 4, p. 354. [s. 1872.]

How can it be affirmed of any that they need no repentance?

TRINITY *Parables of Our Lord*, *Lost Sheep* p. 376. [s. 1880.]

2. *Gram. & Logic.* To make (a statement) in the affirmative; declare affirmatively, as opposed to declare negatively. 3. To confirm, establish, or ratify, as a law or judgment; make firm. 4. *Law.* (1) To reassert and ratify, as a judgment or decree of an inferior tribunal; said of a superior court. (2) To ratify and confirm, as one's previous act.

II. 1. To state the affirmative side. 2. To make a formal declaration or affirmation. 3. *Law.* To make solemn declaration under judicial charge and sanction. [*F. affirm*, < L. *affirmo*, < *ad*, to, + *firmus*, firm.]

**Syn:** assert, avow, declare, depose, swear, tell, maintain, predicate, propound, protest, state, swear, testify. *Affirm* has less of epotism than *assert* (as seen in the word *self-assertion*), coming nearer to *aver*. It has more solemnity than *declare*, and more composure and dignity than *avow*, which is to *assert* excitedly. In legal usage, *affirm* has a general agreement with *depose* and *testify*; it differs from *swear* in not invoking the name of God. See *ALLEGED*; *ASSERT*; *ASSURE*; *AVER*.—*Ant:* contradict, deny, dispute, gainsay, negative, oppose.—*affirm* (ta-tiv), a. Capable of being affirmed.—*a-*ly, *adv.*—*affirmance*, n. 1. 4. To front in position; face; look toward. [*F. affront*, < LL. *affronto*, < L. *ad*, to, + *front* (s), front.]

Syn.: aggravate, annoy, displease, exasperate, insult, irritate, offend, provoke, tease, vex, wound. One may be *affronted* by the well-meant awkwardness of a servant, *affronted* by a light shoe or a thoughtless remark, *affronted* at some

careless neglect or needless misfortune, *wounded* by the ingratitude of child or friend. To *tease* is to give some slight and perhaps playful annoyance. *Aggravate* in the sense of *offend* is colloquial. To *provoke*, literally to call out or challenge, is to begin a contest; *one provokes* another to violence. *Tn affront* is to offer some defiant offense or indignity, as it were, to one's face; it is somewhat less than to *insult*. See *INSULT*. Ant. *confront*, content, gratify, honor, please.

## TABLE OF AFRICAN TRIBES.

The following table presents the principal ethnological groups of African tribes and their localities, as made known to science through the investigations of explorers. The names of stocks are printed in full-face type, as Bantu; the names of important tribes are printed in small capitals, as BECHUANA, and treated more fully in vocabulary place; and those of their branches, as Barolong, are printed in Roman type and indented.

It is impossible to give a complete list of the tribes inhabiting Africa, owing to the fact that the country is not fully explored. Even where the names of the tribes are known their ethnic relations are still a matter of uncertainty in many localities.

Recently a connection has been traced between the Bushmen and the Pigmies.

Of the primitive pygmy negro stock the Hottentots, once considered the parent family, are now regarded as an offshoot of mixed Bantu-Bushman blood. Evidence has been produced of the presence of a belated Hottentot or Hottentot-Bushman group between Kilmarnock and Victoria Nyanza. *Encyc. Brit.* 11th ed., vol. iv, p. 871.

or their production. —ag-glin'-'ti-nag'e-nous, a. 1. Generating agglutinins. 2. Causing agglutination.  
ag-glu'ti-noid, 1 a-glu'ti-noid; 2 a-glu'ti-noid, n. An agglutinin deprived of the zymophore group through degeneration or destruction, the still possessed of the haptophore or combining group.

ag-glu'ti-no-phore, 1 a-glu'ti-no-för; 2 a-glu'ti-no-för, n. A complex of molecules in an agglutinin, which is presumably the cause of their power of agglutination.  
ag-glu'ti-no-phar'le, a. —ag-grace'ti, n. Grace.  
ag-grace'ti, r. 1. To add grace to. 2. To favor. a-grace'ti.  
ag-gra-da'tion, 1 a-gra-de'shan; 2 a-gra-da'shon, n. Geol. 1. The natural filling up of the bed of a watercourse at any point of weakening of the current, by deposition of detritus. 2. Specif., the building up by streams, in arid regions, of fan-like graded plains, by the shifting of streams and the loss of the water in the dry soil: contrasted with degradation, which always precedes it.

The waste plains of arid lands, on the other hand, are regions of degradation. W. D. JOHNSON *21st Annual Rep. U. S. Geol. Survey* pt. iv, p. 620. [cov. rra. arr. '01.]  
[< L. od + GRADATION.] —aggradation plain (Geol.), a topographic plain built up by aggradation in arid districts. It begins by the building up of the hollowed bed of a stream, at the foot of a declivity, forming a plain with a nearly straight longitudinal profile, which may become a very broad plain of deposition.

The last addition to an aggradation plain should exhibit the coarsest material. W. D. JOHNSON *21st Annual Rep. U. S. Geol. Survey* pt. iv, p. 636. [cov. rra. arr. '01.]

—ag-gra-da'tion-al, a. 1. Of, relating to, or caused by aggradation. 2. Producing aggradation.  
ag-grade', 1 a-gräd'; 2 a-gräd', r. [GRAD'EN; GRAD'ING.] Phys. Geog. To add to: opposed to degrade; as, the bed of a river is aggraded when silt is deposited on it. [

ag-gran-dize, 1 a-grän-daiz; 2 a-grän-diz, r. [NIZEN; NIZ'INO.] I. t. 1. To make great or greater; increase or intensify; exalt in honor, wealth, influence, or power.

The first act of Herod, after Augustus had aggrandized him, was to build a temple. GEIKIE *Life of Christ* vol. i, p. 51. [A. 1880.]

2. To cause to appear greater; give grandeur to; widen the scope of; as, Christianity has aggrandized the epic. II. t. [Rare.] To make greater. [

ag-gran-dize, 1 a-grän-diz; 2 a-grän-diz, r. [GRAND'IZ'ER, n. The act of aggrandizing; exaltation or increase in honor or power; as, "personal aggrandizement." McCOSK *Emotions* bk. iii, p. 23. [S. 1870.] 2. Increase in size; enlargement. [

ag-grate', 1 a-grä'te; 2 a-grä'te, r. [VAT'EN; VAT'ING.] 1. To add weight or intensity to; make heavier, worse, or more burdensome; also, to make more heinous; increase the guilt of; as, sickness aggravates the ills of poverty.

The fulness of their knowledge aggravated the perversity of their ignorance. FANNAN *Early Days of Christ*, p. 127. [r. \* w.]

2. [Colloq.] To provoke greatly; exasperate; annoy; as, he aggravates me beyond measure: an erroneous use perhaps from confusion with *aggraver*. 3. To increase inflammation in; irritate; as, to aggravate a wound. 4. [Rare.] To exaggerate; as, to aggravate details. 5. To burden, as with a weight or with accusation. [aggraro, < *ad*, to, + *gravis*, heavy.]

Syn.: enhance, heighten, increase, intensify, magnify, make worse. To aggravate is etymologically to increase in weight, hence to gravity, severity, or intensity. A disease or other evil may be aggravated, but not a person. *Enhance* and *magnify* are often used in the lofty and good sense; as, to enhance the glory of God; "I magnify mine office." Rom. xi, 13. *Aggravate* is used always in the bad sense, to make worse what is already bad; as, to aggravate a fever or an enemy. See AFFRONT; INCREASE. —Ant: alleviate, assuage, attenuate, diminish, lessen, palliate, reduce, soften. —ag-gra-va'tor, n.

ag-gra-va'te, a. Burdened or weighed down; made more serious, as a crime.

ag-gra-va'ting, 1 a-grä-vät'ing; 2 a-grä-vät'ing, pa. 1. [Colloq.] Provoking or fitted to provoke; exasperating; irritating. 2. Making more intense, burdensome, heinous, etc. —ag-gra-va'ting-ly, adv.

ag-gra-va'tion, 1 a-grä-vä'shan; 2 a-grä-vä'shon, n. 1. The act of aggravating, or the state of being aggravated; a making, or the fact of being made, heavier or more heinous, as a crime, offense, misfortune, etc. 2. Originally, an enhancing circumstance; in law, some extrinsic circumstance considered as increasing the atrocity of a crime.

By itself, with *aggravations* not surcharged.  
Or else with just allowance counterpoised.

MILNEN *Satan's Accusers* 1. 769.

3. [Colloq.] (1) The act of provoking; exasperation; annoyance; teasing. (2) Irritation; inflammation. 4. [Rare.] Exaggeration. 5. *R. C. Canon Law*. The censure following a third admonition; the curse denounced against an obstinate offender. 6. A charge; accusation.  
ag-gra-va'tive, 1 a-grä-vä'tiv; 2 a-grä-vä'tiv, I. a. Of, pertaining to, or tending toward aggravation.  
ag-gra-va'tion, 1 a-grä-vä'tion; 2 a-grä-vä'tion, n. One of the constituents or particulars that make up an aggregate, or sum total.

ag-gre-gate, 1 a-grē-gēt; 2 a-grē-gēt, r. [GAT'EN; GAT'ING.] I. t. 1. To bring together, as into one place, mass, sum, or body; collect; mass; as, population and wealth are aggregated in cities. 2. To make as a sum or whole; amount to, as in number, weight, or the like; as, the ships aggregate 5,000 tons. 3. [Rare.] To add as a constituent part or member; unite to (rarely with) a body or association; as, Paul was aggregated to the twelve in the apostolic body.

II. i. To form a mass or collection. —ag-gre-ga'tor, n. ag-gre-gate, a. Collected into a sum, mass, or total; gathered into a whole; also, formed by a collection of individuals; collective. (1) Bot. Agglomerate; collected together: said of (a) flower like the teasel, consisting of a mass of small flowers gathered in a head, or (b) of a fruit like the raspberry, made up of distinct carpels of a single flower massed together. (2) Anat. Formed into clusters; as, aggregate glands. (3) Geol.

Composed of distinct minerals separable by mechanical means, as granite. (4) Zool. Compound: said of animals in which several individuals are united into a common organized mass or oecium, as in tunicates. (5) Logic. Held by more than one person; as, aggregate meaning, a form of common or catholic opinion or thought. See COMMUNITY. [aggrego, pp. *aggregatus*, < *ad*, to, + *grex* (grege), flock.] —corporation aggregate, a body politic consisting of many individuals united in one association and kept up by succession of members, as a city corporation. —ag-gre-gate-ly, adv. —ag-gre-gate-ness, n.

ag-gre-gate, n. 1. The entire number, sum, mass, or quantity of something; amount; complete whole; as, the aggregate of all virtues; wealth in the aggregate.

A nation is but the aggregate of . . . individuals. FROUDE *Short History of England*, p. 258. [A. 1872.] The public happiness is to be found in the happiness of individuals. WEBSTER *Works* vol. i, p. 190. [A. & C. 1864.] 2. Mil. The combined force of enlisted men and officers in a command. 3. Building. Material for making concrete. 4. An assembly or mass of individuals or items; a collection; an aggregation; specif., a rock formed of a collection of minerals. 5. Math. The totality of all points or numbers satisfying a given condition; as, the aggregate of functions. An aggregate in which all points are limiting points, that is, within even an infinitesimal distance of each of which are found an infinite number of points of the aggregate, is termed a dense aggregate. If all the limiting points are points of the aggregate it is called a perfect aggregate. Aggregates of the same power are those which are susceptible of being brought into one-to-one correspondence. An enumerable aggregate is one which has the same power as the aggregate of natural numbers.

Syn.: agglomeration, aggregation, amount, collection, entirety, mass, sum, total, totality, whole. An aggregate of financial items is an amount, sum, or total. An aggregate of material objects is a collection, mass, or whole; an agglomeration is a heterogeneous mass. Collection points rather than the differences, mass to the unity. We say a collection of minerals, a mass of rock. The result of multiplication is a product, the result of addition a sum, total, or aggregate. —social aggregate, a group of beings carrying on a social existence by living or working together.

ag-gre-ga'tion, 1 a-grē-gā'shon; 2 a-grē-gā'shon, n. 1. The act of aggregating, or the state of being aggregated; collection or assemblage into one whole or mass; aggregate condition.

D. S. *Grassier Christian Ethics* pt. ii, p. 222. [L. v. 1875.]  
5f. Conjecture.  
Syn: Inspiration, design, determination, end, endeavor, goal, inclination, intent, intention, mark, object, purpose, tendency. The aim is this direction in which one shoots, or sometimes that which is aimed at. The mark is that at which one shoots; the goal, that toward which one runs. All alike indicates the direction of endeavor. The end is the point at which one would close his labors; the object, that which he would grasp as the reward of his labors. Aspiration, design, endeavor, purpose, referring to the mental acts by which the aim is attained, are often used as interchangeable with aim. Aspiration applies to what are viewed as noble aims; endeavor, design, intention, purpose, indifferently to the best or worst. Aspiration has less of decision than the other terms; one may aspire to an object, and yet lack the fixedness of purpose by which alone it can be attained. Purpose is stronger than intention. Design especially denotes the adaptation of means to an end; endeavor refers to the exertions by which it is to be attained. One whose aims are worthy, whose aspirations are high, whose designs are wise, and whose purposes are attested, may hope to reach the goal of his ambition, and will surely win some object worthy of a life's endeavor. See AMATION; DESIGN; INTENTION; NERVE; PURPOSE. Ant: aimlessness, avoidance, carelessness, heedlessness, neglect, negligence, oversight, purposelessness, thoughtlessness.  
aim'cri'ert, n. One who cried "aim" to archers; hence, an encourager.—aim'fruntlet, n. alr, 1 ar; 2 ar, n. 1. To expose to the air, especially to outdoor air; admit air into; purify or dry by exposing to the air; ventilate; as, to air a room. 2. To expose to heat; as, to air clothing or liquors. 3. To make public; show off; display; as, to air theories.  
II. f. [Archaic.] To take the air, as in the street or park.  
alr't, n. To set to music; compose an air for.  
alr, n. 1. (1) The mixture of gases that forms the apparent blue envelop of the earth. (2) The atmosphere.  
Air consists chiefly of the gases oxygen and nitrogen very nearly in the proportions one to four. Recently it has been found to contain newly discovered gaseous elements nearly allied chemically to nitrogen, which have been named argon, neon, and xenon; also helium, long known spectroscopically as a constituent of the solar atmosphere, and now believed to be a product of the disintegration of radium. These substances exist only as traces, with the exception of argon, which forms nearly 1 per cent. of the atmosphere by volume. There are also numerous impurities such as ammonia, sulfurous acid, etc. Carbonic dioxide, which is present in greater or less quantities, generally about .03 of 1 per cent., is usually regarded as a normal constituent.  
2. The open space around and above the earth; ns, a flaming sword hung in the air; to emerge into the air.  
And all the air a solemn stillness holds. *Gray Elegy* st. 2.  
3. An atmospheric movement or current; wind; breeze; frequently in the plural; as, the gentle airs fanned his cheeks. 4. Utterance abroad; publicity; as, the rumor has taken air. 5. Any gas; especially, gas arising from combustion or the like, as from furnaces in iron-works. 6. *Paint.* The representation of atmosphere; atmospheric perspective. 7. *Liturg.* The nephete. 8. Figuratively, something light and ethereal; wind; as, all air and no sense. 9f. Breath; hence, information; intelligence. [F., *air*, *Gr. aer*, *to breathe*, breathe.]  
alr'et, 1 e'et; 2 f'et, n. 1. An inflated bag used to raise or buoy up a sinking or sunken vessel. 2. In a pneumatic molding-machine, a device consisting of air-filled bags, which give the proper pressure to the sand; also, any device composed of air-filled bags for exerting a uniform pressure, as in printing-frames, bookbinders' case-making machines, etc. 3. [Slang.] A shallow, loquacious person.—air-ball, n. A ball inflated with air, used for a toy.—air-barometer, n. A device for recording slight oscillations, as in the level of well-water by recording changes of air-pressure.—air-base, n. A place or region used as a basis of operation for aeroplanes.—air-beat, n. A single pulsation of air such as one felt mechanically from a vibrating object in which the waves are of extremely low frequency.—air-bell, n. 1. *Zooph.* A roundish or pear-shaped organ acting probably as a gas-respiratory gland for the swim-bladder in *Auromedus*; an aurophore. 2. An air-globule, as a bubble formed in glass-making or in developing photographs; air-bladder.—air-billow, n. A prolonged and moderate atmospheric wave, specif. an air-wave originating between two horizontal strata of varying velocity and direction.—air-bladder, n. 1. A sac filled with air, the homolog of a lung, generally situated under the anterior part of the spinal column of fishes, aiding them to maintain an equilibrium in the water; the sound. 2. Any vesicle filled with air, as in seaweed, glass, iron-castings, etc.—air-blast, n. An air-current (1) forced upon a fire to stimulate combustion; (2) directed on a dust or dirt or in prevention of sparking; (3) impinged upon surfaces for polishing and abrading.—air-beat, n. A hydromecran.—air-bone, n. A bone filled with air, as in birds.—air-bottle, n. A portable metallic container for compressed air, used for inflating automobile tires.—air-brand, n. A prevented by the presence of air from acting; said of suction-pipes and sewage-pipes.—air-box, n. 1. The conduit through which

air for heating rooms is supplied to a furnace. See *Illus.* under FURNACE. 2. An air-compartment of a life-boat. 3. A due to convey fresh air into a mine.—air-brake, n. See BRAKE.—air-brush, n. An implement for spraying liquid color by compressed air.—air-bucket, n. A water-wheel bucket so arranged that the air may escape without interfering with the entering water.—air-bug, n. Any true bug living in the open air and not in water; a land-bug.—air-built, n. Baseless; chimerical.—air-casting, n. A casting with an air-space between it and the object enclosed, to prevent too great transmission or radiation of heat.—air-castle, n. A visionary project or scheme; a daydream.—air-cataract, n. An apparatus for lessening the impact of a moving object suddenly stopped, in which the air acts as a cushion, and lessens the force of impact.—air-cavity, n. Any cavity containing air, as the air-sacs in birds.—air-cell, n. 1. *Zool.* A cavity for the reception of air. Specifically: (1) One of the minute compartments lining the alveolar passages and air-sacs of the lungs; an alveolus. (2) An air-cell of a bird. (3) A dilatation of the air-vessels or trachea of an insect. (4) A cell or cavity filled with air, in various parts of the tissues of plants and animals. 2. A chamber or enclosed space containing air; as, (1) to preserve buoyancy, as in a life-boat; (2) to serve as a cushion, as in a force-pump (see *Illus.* under FORCE-PUMP); (3) to receive air from a water-pipe; (4) an air-cell; (5) a compartment between the septa of various chambered *Cephalopoda*, as the nautilus; a camera; loculus.—air-chambered, a.—air-channel, n. 1. A channel through which air passes. 2. pl. Channels in the masonry of walls and fire-bridges and beneath the hearths of reverberatory furnaces, intended to prevent the air admitted and to prevent injury to the foundations from the great heat of the furnace.—air-creck, n. A faucet used to control the passage of air.—air-compartment, n. An air-tight part, as of a shaft, for ventilating a mine.—air-cone, n. In a marine engine, a cone to receive air and steam from the hot-well.—air-cooled, a.—air-cooling, a. Reducing the heat of the cylinder of a gasoline-engine, as in motor vehicles, by diffusing it over an enlarged surface through additional radiators and exposing it to a current of air.—air-craft, n. The science of aerial navigation. 2. Aeroplanes and balloons collectively.—air-craft, n. Air plane in a mine where one air-course runs over or under another one, or over or under the level or gang-road.—air-cushion, n. 1. A bag inflated with air, specif. one used (1) as a pillow, or (2) in a water-pipe to lessen the water-hammer. 2. An air-spring.—air-cylinder, n. 1. A nearly air-tight cylinder buying a piston playing in it; used to check the recoil of a gun. 2. A cylinder beneath a railway-car, in which is compressed air which operates brakes.—air-dew, n. Manna.—air-door, n. A door for controlling air-currents in a mine.—air-drain, n. 1. A channel around a foundation to promote dryness by allowing for circulation of air. 2. A passage for the escape of gas from a mold while the molten metal is being poured in.—air-drawn, a. Drawn in the air; imaginary.—air-dried, a. Evaporated; dried in the air, as fruit.—air-driven, a. Driven by air, especially by compressed air.—air-dry, a. So thoroughly dry that no moisture is expelled upon exposure to the air.—air-drying, n. Drying in air by exposure, as woods, fruits, etc.—air-duct, n. 1. A tube or passage conveying air. 2. Specif. the duct connecting the air-bladder with the intestines collectively.—air-eel, n. A fish.—air-fish, n. *Pathol.* Embolism by bubbles of air in the veins.—air-fendway, n. [Eng.] A passage made in a coal-seam for ventilation.—air-float, n. Same as AIR-PLATE. 2.—air-floated, a. Separated by an air-current; said of light substances, such as fine graphite.—air-flue, n. A small flue in a chimney through which to draw the foul air from a room.—air-formed, a. Molds of or like the air.—air-fountain, n. A fountain which ejects water by means of compressed air.—air-funnel, n. 1. A ventilating-flue formed by leather tubes coming from a vessel's tank or upper work above the water-line. 2. *Zool.* The inferior part of the pneumotocyst of a free-swimming siphonophore in which the gas is secreted.—air-gap, n. 1. The air-spaces between the armature and field in a dynamo or motor. 2. Same as GAP. 2.—air-gas, n. Air mixed with hydrocarbon vapor; used for heating and as an illuminant.—air-gossamer, n. An air-thread.—air-heading, n. A smaller passage in a mine driven parallel with the gangway, and used for ventilation.—air-jack, n. A lifting-jack operated by compressed air and consisting of a vertical cylinder and piston, the rod of which serves as a lifting-arm.—air-jacket, n. To furnish with an air-jacket.—air-jacket, n. A garment, usually of rubber, inflated and used as a life-preserver.—air-jlg, n. *Mining.* An apparatus which by means of currents of air separates minerals according to their specific gravity.—air-leak, n. *Elec.* The loss of charge sustained by an insulated substance because of the discharging action of the surrounding atmosphere.—air-lift, n. A pump in which the lifting power consists of air drawn down an inner pipe to force water up an outer one.—air-line, n. 1. The shortest distance between two points on the earth's surface. 2. A direct railroad route.—air-liquefier, n. A device for changing air into liquid air, as by means of compression and cooling.—air-luck, n. 1. An air-tight nitchamber of a submarine caisson; for graduating the air-pressure. 2. A stoppage of the flow of water in a pump caused by the presence of air.—air-lugged, a. Impeded by the air, as a piston-head in a cylinder.—air-lap, n. A narrow window.—air-machine, n. A ventilating-machine for renewing the air, as in a mine.—air-monger, n. A visionary.—air-passage, n. *Bot.* An extended air-space between cells, as in stems of some water-plants.—air-pillow, n. See AIR-CUSHION.—air-plane, n. An aeroplane.—air-plant, n. A plant unconnected with the ground, growing on a tree or other object, but not parasitic and deriving its nourishment from the atmosphere specially.—air-plate, n. An orchid.—air-plate, n. A hored plate permitting only a given quantity of air to pass through; a perforated haffle-plate.—air-plus, n. *Naut.* A plug that can be removed from a water-tight manhole-plate or scuttle-cover into which it is screwed.—air-pocket, n. Same as POCKET. 8.—air-poise, n. An instrument for weighing air.—air-pore, n. Same as STOMA.—air-potato, n. An East-Indian yam (*Dioscorea bulbifera*). A small herbaceous climber, cultivated as an oddity, bearing white, angular tubers, edible like potatoes.—air-pressure, n. Atmospheric pressure.—air-proof, a. Impenetrable by air.—air-propeller, n. 1. Any ventilating device that diffuses air, as a rotary fan. 2. A device for supplying air, as to an iceboat, to aid in its propulsion.—air-receiver, n. A contrivance for equalizing the air pressure in a furnace.—air-receptacle or air-spr, n. A place for air; an air-sac in a bird.—air-regulator, n. The regulator which heats water in a steam boiler, or a heating or steam-welding furnace, coke-ovens, etc.—air-register, n. Same as REGISTER. 4.—air-saller, n. *Aero.* A glider.—air-separator, n. Any apparatus, as a dust-separator, utilizing air-power, as for the separation of minerals.—air-setting, a. Hardening by exposure to the air, as cement.—air-sickness, n. Same as

**AERIAL SICKNESS.**—*air-sinus*, *n.* One of the hollow spaces in the bones of the skull that communicate with the nasal passages. —*air-slaked*, *a.* Slaked by exposure to the air, as lime. Geog.* A noa-volcano opening from which gas, mud, and stones are ejected. —*air-washer*, *n.* A device for clearing air of foreign substances by circulating it through water. —*air-washings*, *n. pl.* The atmospheric impurities remaining in a liquid through which air has been passed for purification. —*air-wood*, *n.* Any substance for air, particularly the ventilating passage of a mine. —*air-wood*, *n.* [Rare.] Wood dried in the air, *i. e.*, not kiln-dried. —*dephlogisticated air*, oxygen. —*fixed air*, carbon-dioxide gas. —*hot air* [Slang, U. S.], empty bragadocio; boastfulness. —*In the air*, 1. Insecure; unsupported; also, abroad; prevalent; as, the battery is *in the air*; changes are *in the air*. 2. Without body or foundation in fact; undetermined; as, this project is *as yet all in the air*. —*to be up in the air* [Colloq., U. S.], to become excited; as, he *went up in the air* when told the cost. —*to heat the air*, to make vain or blind efforts. —*to take air*, to become public; as, the scandal is *sure to take air*. —*to take the air*, 1. *Falconry*. To try to rise above the falcon: said of a bird trying to escape. 2. To go into the air. 3. To make a trip in an airplane.

*Air* is used as the first element in self-explaining compound nouns naming: (1) Things containing air; as,

*air-drum* *air-holder* *air-reservoir*  
(2) Things conveying air or permitting it to pass; as,  
*air-brick* *air-grating* *air-scuttle*  
*air-bridge* *air-hole* *air-shaft*  
*air-course* *air-level* *air-stack*  
*air-exhaust* *air-pipe* *air-strainer*  
*air-lauet* *air-pit* *air-strake*  
*air-gate* *air-port* *air-tube*

(3) Things operated by air, or using it as a motive fluid; as,  
*air-balloon* *air-hoist* *air-telegraph*  
*air-drill* *air-locomotive* *air-thermometer*  
*air-engine* *air-plat* *air-whistle*  
*air-hammer* *air-spring*

(4) Things designed to distribute or move air, to regulate its flow, or to act on it; as,  
*air-carburetor* *air-condenser* *air-injector*  
*air-compressor* *air-governor* *air-regulator*

(5) Things used for measuring the humidity, purity, quantity, velocity, etc., of air; as,  
*air-gage* *air-manometer* *air-meter* *air-tester*

(6) Things in which air forms the principal or sole component or agent; as,  
*air-hath* *air-cure* *air-current*  
—*air-less*, *a.* Not open to the air; destitute of air; as, an *airless vault*; *airless space*. —*air-like*, *a.*

*air*, *n.* 1. The peculiar or characteristic appearance, mien, or manner of a person or thing; as, a kingly *air*; an *air* of secrecy.

The great dome of St. Paul's looks down with an *air* of motherly protection. *Invivo Sketch-Book* p. 190. [J. N. A. 1886.]

2. Artificial or assumed manner or appearance; affectation: commonly in the plural.

Don't be haughty, and put on *airs*.

SAXE *Proud Miss McBride*, *Moral*.  
Syn: appearance, bearing, behavior, carriage, demeanor, expression, fashion, look, manner, mien, port, sort, style, way. *Air* is that combination of qualities which makes the entire impression we receive in a person's presence; as, we say he has the *air* of a scholar, or the *air* of a villain.

*Appearance* refers more to the dress and other externals. We might say of a travel-soiled pedestrian, he has the *appearance* of a tramp, but the *air* of a gentleman. *Expression* and *look* especially refer to the face. *Expression* is oftenest applied to that which is habitual; as, he has a pleasant *expression* of countenance; *look* may be momentary; as, he gave his comrade a significant *look*. We may, however, speak of the *look* or *looks* as indicating all that we look at; as, he had the *look* of an adventurer; I did not like his *looks*.

*Bearing* is rather a lofty word; as, he has a noble *bearing*; *port* is practically identical in meaning with *bearing*, but is more exclusively a literary word. *Carriage*, too, is generally used in a good sense; as, the lady has a good *carriage*. *Mien* is closely synonymous with *air*, but less often used in a bad sense. We say a rakish *air*, rather than a rakish *mien*. *Mien* may be used to express some prevailing feeling as, "an indignant *mien*." *Demeanor* goes beyond *appearance*, including conduct, behavior; as, a modest *demeanor*. *Manner* and *style* are, in large part at least, acquired. See *BEHAVIOR*; *MANNER*; *PRETENSE*. —*to give oneself airs*, to assume affected manners of superiority.

*air*, *n.* *Mus.* 1. A melody as contrasted with a harmonic succession of notes, rhythmically arranged; tune. Sweet air, how every note brings back  
Some sunny hope, some day-dream bright!

MOORE *Come Play that Simple Air Again* st. 2.  
2. The leading part in a harmonized piece: usually soprano; as, she sang the *air*, and I the alto. [F., < *It. aria*, < *L. aria*, atmosphere; see *AIR*, n.] Syn: see *TUNE*. —*national air*, the tune of a popular patriotic song recognized either officially or by general consent.

Syn: affright, apprehension, consternation, dismay, disquietude, dread, fear, fright, panic, terror, timidity. *Alarm* according to its derivation [it.] *al'orm*, "to arms," is an arousing to meet and repel danger, and may be quite consistent with true courage. *Affright* and *fright* express sudden fear which, for the time at least, overwhelms courage. The sentinel discovers with *alarm* the sudden approach of the enemy; the unarmed villagers view it with *affright*. *Apprehension*, *disquietude*, and *dread* are in anticipation of danger; *consternation*, *dismay*, and *terror* are overwhelming fear, generally in the actual presence of that which is terrible. The words also may have an anticipative force. *Timidity*, quality, habit, or condition, a readiness to be affected with fear. A person of great timidity is constantly liable to needless alarm and even terror. *Panic* is a sudden, overwhelming terror, with or without reason, pervading numbers at once; as, a *panic* seized the troops; a financial *panic*. —Ant: assurance, calmness, confidence, repose, security. —Prep: alarm in the camp; among the soldiers; alarm at the news.

1. The first step in the process is to identify the problem. This involves gathering information about the situation and determining what needs to be done. It is important to involve all relevant parties in this process to ensure that everyone has a clear understanding of the problem and the goals of the project.

2. The second step is to develop a plan. This involves determining the steps that need to be taken to solve the problem. It is important to consider all possible options and to choose the one that is most likely to be successful. The plan should also include a timeline and a budget to ensure that the project is completed on time and within budget.

3. The third step is to implement the plan. This involves putting the plan into action. It is important to monitor the progress of the project and to make adjustments as needed. Communication is key in this step to ensure that everyone is working together effectively.

4. The fourth step is to evaluate the results. This involves assessing the outcomes of the project and determining whether the goals have been achieved. It is important to gather feedback from all relevant parties to ensure that the project has been successful and to identify any areas for improvement.

5. The fifth step is to document the results. This involves creating a record of the project's progress and outcomes. This documentation is important for future reference and to ensure that the project's success can be replicated in the future.

On the 11th of May, 1900, the first of the new  
year was celebrated at the residence of the  
Governor. The occasion was marked by a  
grand ball given by the Governor and  
Governess. The ball was held at the  
Grand Hotel, and was attended by  
over a thousand guests. The music was  
provided by the Grand Hotel Orchestra.  
The dancing was kept up until  
one o'clock in the morning. The  
ball was a great success, and  
was enjoyed by all who attended.

II. t. [Archae.] To grow calm; subside. [*Gr. allaiō, to draw down*]  
+ A. leagan; see LAY, n.]—al-lay', n.  
Syn.: allay, alleviate, lax, calm, compose, mollify, pacify, quiet, soothe, still, tranquilize. *Al-lay* and *alliterate* are closely kindred in signification, and have been often interchanged in usage. But, in 2. *allay* is to lay to rest, quiet, or soothe; that which is excited; to allay is to calm on the other hand, is to lighten a burden. *We allay* suffering by using means to soothe and tranquilize the sufferer; we *alliterate* suffering by doing something toward removal of the cause, so that there is less to suffer; where the trouble is wholly or chiefly in the excitement, to *allay* the excitement is virtually to remove the trouble; as, to *allay* rage or pain; we *alliterate* poverty, but do not *allay* it. *Pacify*, directly from the Latin, and *appease*, from the Latin through the French, signify in tranquilizing to pacify; to mollify is to soften; to calm, quiet, or tranquilize is to make still; come to place together, unite, adjust in a calm and settled condition; to soothe (originally to assent in, humor) is to bring to pleased quietude. *We allay* excitement, *appease* a tumult, *calm* agitation, *compose* our feelings or countenance, *pacify* the quarrelsome, *quiet* the boisterous or clamorous, *soothe* grief or distress. 3. To set off or assign for a certain purpose; as, land allotted for a free library. 4. [Local, U. S.] To reckon; think; as, I allot we must economize.

Indies. 2. A Portuguese town; scene of the defeat of the French under Massena by the Allies under Wellington, Aug. 5, 1811.

Aluminum does not oxidize or tarnish like most metals, when exposed to dry or moist air, and neither hot nor cold water has any effect on it. When hammered and rolled it becomes as hard as iron and it is lighter than glass. It has been proposed for use in many cases in which lightness and strength combined are desired, as for air-ships, as a substitute for iron in the manufacture of boats and bridges, and as a structural material. The tenacity with which aluminum clings to its oxygen made it at first an exceedingly expensive metal to extract from its ores, but since 1876, when the more recent advances in electricity began, methods have been devised for their electrolytic reduction.

The metal aluminum occurs widely and abundantly distributed in nature, but always in combination. . . . At the present day nearly all of the metal is made by the action of powerful electric currents on molten mixtures of its compounds; for example, the oxide dissolved in cryolite. Formerly it was quite expensive, but it is now so cheap that it may be considered among the common metals. In 1876 it cost about 20 dollars, now it is worth from 35 to 40 cents. . . . Its properties make it a highly useful metal, and it is being employed for many purposes for which iron was formerly used. Most of the metal is used for making alloys. *Nat. Stand. Dispens.* p. 146. [L. nos. & co. '95.]

[< L. *alumen*, alum.] **al'u-min'i-um**: aluminum brass, a malleable, ductile alloy of aluminum, copper, and zinc, in proportions varying from 1 to 5.8 parts, 55.8 to 77.5 parts and 21 to 43 parts of each metal, respectively. Its tensile strength is greater than that of the usual brass, and alloy of aluminum and copper resembling pale gold; used in cheap jewelry, etc.—**a. chlorid** (*Chem.*), a yellowish-white crystalline powder ( $AlCl_3 \cdot 6H_2O$ ) used as a remedy in locomotor ataxia and as a disinfectant. It is soluble in water, alcohol, and when dehydrated also in ether.—**a. hydroid** (*Chem.*), a compound ( $Al(OH)_3$ ), obtained from alum by precipitation with alkali hydroxids or carbonates as a white, tasteless, odorless powder used in medicine, externally, as an astringent, and in the arts for manufacture of lakes with organic dyes.—**a. silver**, a bright alloy of aluminum and silver, used in instruments where lightness is desirable.—**a. sulfate**, *Chem.* 1. A white, odorless crystalline powder ( $Al(SO_4)_3 \cdot 18H_2O$ ) soluble in water, and used in medicine as an antiseptic for purulent ulcers, etc. According to the United States Pharmacopoeia it must be 99.5 per cent. pure. 2. A yellowish-white to bluish-white crystalline mass—the crude form—used in the arts, as for clarifying water, dressing leather, making paper, and as a mordant in dyeing; concentrated or patent alum.—**al'um-ish**, 1 *al'um-ish*; 2 *al'um-ish*, *o*. Of the nature of or slightly like alum.

**al'um-na**, 1 *al'um-na*; 2 *al'um-na*, *n*. [*N.E.* 1-ni; 2-nē, pl.] A woman graduate. [*L.*, fem. of *alumnus*. See *ALUMNUS*.]

**al'um-na**, 1 *al'um-na*; 2 *al'um-na*, *o*. Of or pertaining to alumni or alumna.

**al'um-nal-ate**, 1 *al'um-nal-ate*; 2 *al'um-nal-ate*, *n*. The time during which one is under instruction; pupillage.

**al'um-nol**, 1 *al'um-nol* or *-nel*; 2 *al'um-nol* or *-nol*, *n*. *Pharm.* The aluminum salt of naphthol disulfonic acid. [*< ALUMINO- + -ol*.]

**al'um-nus**, 1 *al'um-nus*; 2 *al'um-nus*, *n*. [*N.E.* 1-nōi; 2-nl, pl.] A male graduate from a school, college, or other institution of learning; loosely, any pupil of a college or school. [*L.*, foster-son, < *olo*, nourish.]

**al'um-root**, *n*. See under *ALUM*.

**al'um-dum**, 1 *al'um-dum*; 2 *al'um-dum*, *n*. A crystalline aluminum abrasive made in electric furnaces; a protected trade-mark name. *NORTON & COMPANY*, Worcester, Mass.

**al'u-ffer-ous**, *a*. Same as *ALUMINIFEROUS*.

**al'u-ffe**, 1 *al'u-ffe*; 2 *al'u-ffe*, *n*. *Mineral*. A white hydrous potassium-aluminum sulfate ( $H_2KAl_2(SO_4)_3$ ), crystallizing in the hexagonal system. [*< F.* *alum*, *ALUM*.] **al'u-min'i-ffe**.

**al'u-no-gen**, 1 *al'u-no-gen*; 2 *al'u-no-gen*, *n*. *Mineral*. A silky white hydrous aluminum sulfate ( $H_2Al_2(SO_4)_3$ ), crystallizing in the monoclinic system. [*< F.* *alum* (see *ALUM*) + *-gen*.]

**al'u-pag**, 1 *al'u-pag*; 2 *al'u-pag*, *n*. [*P.* 1.] A tree, the alpay; Tagalog term.

**al'u-red-us**, *n*. *Alfredus*. See *ALFRED*.

**al'ur-rite**, 1 *al'ur-rite*; 2 *al'ur-rite*, *n*. *Mineral*. A purple to red scaly variety of mica ( $HR_2Al_2(OH)_2Al_2(SiO_3)_4$ ), found massive. [*< Gr.* *alourgēs*, purple.]

**al'us**, 1 *al'us*; 2 *al'us*, *n*. [*Anglo-Ind.*] The tree of a Mah-ratta flow.

**al'u-ta**, 1 *al'u-ta*; 2 *al'u-ta*, *n*. [*L.*] 1. A soft leather, probably dressed with alum. 2. A plaster spread on wet leather. 3. A soft, pliable, non-laminated leather-stone.

**al'u-ta-ceous**, 1 *al'u-ta-ceous*; 2 *al'u-ta-ceous*, *a*. 1. Resembling tawed leather, as in its soft and pliable qualities or its color; leathery. 2. *Bot.* Pale-brown to color.

**al'u-vi-ty**, 1 *al'u-vi-ty*; 2 *al'u-vi-ty*, *n*. A town in Misamis district, Mindanao, P. I.

**al'va**, 1 *al'va* or (*Sp.*) *al'va*; 2 *al'va* or (*Sp.*) *al'va*, *n*. 1. Duke of (1505-1512), Fernando Alvarez de Toledo, a Spanish general; ravaged the Netherlands. 2. A city in Woods county, Okla.

**al'vah**, 1 *al'vah*; 2 *al'vah*, *n*. *Bib.* *Gen.* xxxvi, 40.

**al'va-ma-ri-na**, 1 *al'va-ma-ri-na*; 2 *al'va-ma-ri-na*, *n*. Sea-sedge; dried eel-grass used as food packing, stuffing mattresses, etc. [*For L. uro*, sedge; *morta*, f. of *murtus*; see *MARINE*.]

**al'va-ra**, 1 *al'va-ra*; 2 *al'va-ra*, *n*. *Bib.* *Gen.* xxxvi, 23.

**al'va-ra-do**, 1 *al'va-ra-do*; 2 *al'va-ra-do*, *n*. 1. Alonso de (1497-1556), a Spanish officer in Mexico and in Peru. 2. Pedro de (1495-1541), a Spanish officer with Cortez. 3. *al'va-ra-do*; 2 *al'va-ra-do*, *n*. A city in Johnson county, Tex.

**al'va-tes**, 1 *al'va-tes*; 2 *al'va-tes*, *n*. 1. Albert Raymond (1861- ) (d. R. Gourron, a French operatic tenor singer. 2. Francisco (died 1502), a Portuguese traveler in Abyssinia. 3. Don José (1768-1830), a Spanish sculptor. 4. Juan (1780-1867), a Mexican general and statesman.

**al'va-ry**, 1 *al'va-ry*; 2 *al'va-ry*, *n*. [*Anglo-Ind.*] A transverse beam fastened to a pole, used to level plowed fields.

**al'vi-ty**, 1 *al'vi-ty*; 2 *al'vi-ty*, *n*. [*N.E.* 1-ty; 2-ty, pl.] 1. A beehive; a name given to an early dictionary of English, Latin, French, and Greek. [*N.E.* 2. *Anat.* The hollow of the external ear; so called from the wax found there. [*< L.* *alveum*, beehive, < *alveus*, cavity.] **al'vi-ty-um**.

**al'vi-ty**, 1 *al'vi-ty*; 2 *al'vi-ty*, *n*. [*N.E.* 1-ty; 2-ty, pl.] To shape like a dome; to hallow out. [*< L.* *alveus*, hollowed.] **al'vi-ty**, 1 *al'vi-ty*; 2 *al'vi-ty*, *n*. A market-town in Worcestershire, England.

**al'vi-ty**, 1 *al'vi-ty*; 2 *al'vi-ty*, *n*. *Bot.* The oleo-resinous

milky juice of a Brazilian tree (*Euphorbia heterodoxa*) of the spurge family. It is employed in medicine. **al'vi-ty**.

**al'vi-ty**, 1 *al'vi-ty*; 2 *al'vi-ty*, *n*. *Bot.* 1. A deep angular cavity in the receptacle of a composite flower, as the cotton-chistle. 2. The depressed perithechium in certain ascomycetous fungi. 3. A pore in a fungus of the family Polyporaceae.

**al'vi-ty**, 1 *al'vi-ty*; 2 *al'vi-ty*, *n*. *Bot.* 1. A deep angular cavity in the receptacle of a composite flower, as the cotton-chistle. 2. The depressed perithechium in certain ascomycetous fungi. 3. A pore in a fungus of the family Polyporaceae.

on traitors, forgers, and fraudulent bankrupts; the simple amende honorable was made before the judges in court; the amende honorable in figuris was made in the public square, before the populace, the guilty person being robed in white, with bare feet and head, and bearing a lighted candle in his hand and an inscription on his breast. This punishment formed part of the Roman, French, and Dutch systems; it was abolished in France in 1791, revived in 1825, and once more suppressed in 1830, but continued in the form of a reparation until abolished in 1894. The word continues to be used in the Roman Catholic Church to denote prayers of reparation for sacrilege.

*Amende honorable*, in France, was a degrading punishment inflicted on traitors, who were brought into court with a rope round their neck, and made to beg pardon.

Brewer Dict. Phrase and Fable.

American E. F., abbr. American Expeditionary Force.

A-mer'i-can Fork City. A city in Utah county, Utah.

A-mer'i-can-ism, 1 e-mer'i-kan-izm; 2 a-mer'i-can-izm, n. 1. A word or phrase peculiar to the people of the United States, or to some of them; also, a peculiar sense in which an English word or phrase is used in the United States.

Americanisms derived, it is scarcely needful to say, from a variety of sources— from the language of the Red Men, from European immigrants of all nations, from the 'Heavenly Chinese,' and from the negro. It is curious, too, to note how the words and terms which have passed out of use in England, but are preserved in our older literature, are employed in the common talk of the American people. *Little's Living Age* (Boston Aug. 17, 1872, p. 447.

2. Any usage, trait, idea, or the like, peculiar to the people of the United States. 3. American citizenship; also, attachment to American institutions and customs.

In the following list of Americanisms only terms that have had wide circulation are included. For the nicknames of States, see under appropriate word.

TRENCH SELECT GLOSSARY p. 6. [k. r. & co. 1890.]

[F. < L. *amicabilis*; see AMICABLE.] **'mī-a-ble**.

Syn.: agreeable, attractive, benignant, charming, engaging, gentle, good-natured, kind, lovable, lovely, loving, pleasant, pleasing, sweet, winning, winsome. *Amiable* combines the senses of *lovable* or *lovely* and *loving*; the *amiable* character has ready affection and kindness for others, with the qualities that are adapted to win their love; *amiable* is a higher and stronger word than *good-natured* or *agreeable*. *Lovely* is often applied to externals; as, a *lovely* face. *Amiable* denotes a disposition desirous to cheer, please, comfort, and help. A *lovely* man of the world may have the art to be *agreeable*; a handsome, brilliant, and witty person may be *charming* or *attractive*, while by no means *amiable*. The *engaging*, *winning*, and *winsome* add to amiability something of beauty, accomplishments, and grace. The *benignant* are calmly klad, as from n height and a distance. A *kind*, *good-natured* people may be coarse and rude, and so fail to be *agreeable* or *pleasing*; the really *amiable* are likely to avoid such faults by their earnest desire to please. The *good-natured* have an easy disposition to get along comfortably with every one in all circumstances. A *sweet* disposition is very sure to be *amiable*, the *loving* heart bringing out all that is *lovable* and *lovely* in character.—*Am*, abominable, churlish, cruel, disagreeable, hateful, ill-dispositioned, little more than unlovely.

—**'mī-a-ble(-ness)**, *n.* **'mī-a-ble(-ity)**, *a.*

**mī-an-thūs**, 1 am'ān-thūs; 2 ām'ān-thūs, *n.* 1. Mineral. One of the finer and more silky varieties of asbestos. 2. A fabric made from this mineral. [*< L. amiantus, < Gr. amiantos, unstained, < a- priv. + mī-atōn, stain.*] **'mī-an'tant**; **'mī-an-th'**;—**'mī-an'ti-form**, *a.* Like amiantus in form or structure. **'mī-an'thi-form**;—**'mī-an'tine**, *a.* Consisting of or having the characteristics of asbestos; like amiantus. **'mī-an'thine**;—**'mī-an'thi-nite**, *n.* Mineral. Asbestos.—**'mī-an'told**. I. *a.* Having the appearance of asbestos. **'mī-an-tho'l'dal**; **'mī-an'to'l'dal**: II. *n.* Mineral. COLERIDGE *Genesis* st. 4.

[*ME. amide*, < AS. *on middan*; on, in; *middan*, dat. of *midde*, < *mid*; see *AMID*.]

Syn. *amidst*, among, amongst, between, betwixt, in the midst of. *Amid* or *amidst* denotes surrounded by; among or amongst, mingled with. *Between* (or, in old or poetic style, *betwixt*) is said of two persons or objects, or of two groups of persons or objects. "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen." *Gen.* xlii, 9; the reference being to two herds of herdmen. *Amid* denotes mere position; among, some active relation, as of companionship, hostility, etc. Lowell's "Among my Books" regards the books as companions; *amid* my books would suggest packing, storing, or some other incidental circumstance. We say among friends, or among enemies, *amidst* the woods, *amidst* the shadows. In the midst of may have merely the local meaning; as, I found myself in the midst of a crowd; or it may express even closer association than among; as, "I lay myself in the midst of friends" suggests their pressing up on every side, oneself the central object; so, "where two or three are met together in my name, there am I in the midst of them." *Matt.* xviii, 20; in which case it would be feeble to say "among them." Impossible to say "amid them," not so well to say "amidst them."—Ant: afar, away, beyond, outside, without.

*a-m'id*, adv. In the middle.

*Am'i-da*, 1 am'i-da; 2 am'i-da, n. One of the five Buddhas of the present Kalpa, greatly honored in Japan.

The same center that swung before *Amida* could be refilled to wait Christian incense. GURRIS *Mikado's Empire* p. 252. In 1870.

*A-m'i-dah*, 1 a-m'i-dah; 2 a-m'i-dah, n. *Judaism.* The *Shemoneh Esreh*, or collection of *yaqet* benedictions recited morning, afternoon, and evening. It includes three praises, thirteen petitions, and three thanksgivings.

*am'i-dat'*, a. *Chem.* Changed into an *amid*.

*am'i-did*, 1 am'i-did, -did or -doid; 2 am'i-did, -did or -doid, n. *Chem.* A compound containing the group amidogen in union with an element or another radical.

*am'i-din*, 1 am'i-din, -din or -din; 2 am'i-din, -din or -din, n. *Chem.* A compound derived from acid amids through substitution of carbonyl oxygen by the imid (NH) group, as acetamidin (CH<sub>3</sub>C(NH).NH<sub>2</sub>). [*< AMIN*,]

*am'i-din*, n. A transparent gelatinous solution of *am'i-dine*, starch in hot water. [*< am'id* as in *F. amidon*, starch, < *amylum*, < Gr. *amylon*, meal, < a-priv, < *myla*, mill.]

*a-m'id-most*, adv. & prep. In the very middle (of).

*am'i-do*, 1 am'i-do; 2 am'i-do, n. *Chem.* Derived from *amid*: a combining form indicating that the compound has had one atom of hydrogen (H) replaced by amidogen; as, *amido-benzene*, *amido-toluol*,—*am'i-do-a-cet'ic*, a. See *GLYCOCOL*.—*amidoacetic acid*, glycolic.—*am'i-do-an'ti-py-rin*, n. A bright yellow crystalline substance (C<sub>10</sub>H<sub>7</sub>N<sub>3</sub>O<sub>2</sub>), obtained by reducing nitroso-antipyrin.

*am'i-do-az'o*, 1 am'i-do-az'o; 2 am'i-do-az'o, n. *Chem.* A combining form indicating that the resulting compound contains both amido and azo radicals.—*am'i-do-benz'ene*, n. Aniline yellow.—*am'i-do-az'o-ben'z'ol*, n. *Chem.* An azobenzol (C<sub>6</sub>H<sub>5</sub>N=N<sub>2</sub>C<sub>6</sub>H<sub>5</sub>), into which the amido group has been introduced (C<sub>6</sub>H<sub>5</sub>N=N<sub>2</sub>CO<sub>2</sub>H.NH<sub>2</sub>). *am'i-do-az'o-ben'z'ol*.

*am'i-do-gen*, 1 a-m'id-o-gen; 2 a-m'id-o-gen, n. *Chem.* A hypothetical radical (NH<sub>2</sub>), not yet isolated, but known from its existence in various organic compounds. [*< AMINO*, < GEN.]

*am'i-dol*, 1 am'i-dol or -dol; 2 am'i-dol or -dol, n. *Chem.* A white crystalline powder (C<sub>6</sub>H<sub>5</sub>(NH<sub>2</sub>)<sub>2</sub>OH) used in photography as a developer for bromid plates. [*< AMIN*, < OL.]

[*ME. amide*, < AS. *on middan*; on, in; *middan*, dat. of *midde*, < *mid*; see *AMID*.]

Syn. *amidst*, among, amongst, between, betwixt, in the midst of. *Amid* or *amidst* denotes surrounded by; among or amongst, mingled with. *Between* (or, in old or poetic style, *betwixt*) is said of two persons or objects, or of two groups of persons or objects. "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen." *Gen.* xlii, 9; the reference being to two herds of herdmen. *Amid* denotes mere position; among, some active relation, as of companionship, hostility, etc. Lowell's "Among my Books" regards the books as companions; *amid* my books would suggest packing, storing, or some other incidental circumstance. We say among friends, or among enemies, *amidst* the woods, *amidst* the shadows. In the midst of may have merely the local meaning; as, I found myself in the midst of a crowd; or it may express even closer association than among; as, "I lay myself in the midst of friends" suggests their pressing up on every side, oneself the central object; so, "where two or three are met together in my name, there am I in the midst of them." *Matt.* xviii, 20; in which case it would be feeble to say "among them." Impossible to say "amid them," not so well to say "amidst them."—Ant: afar, away, beyond, outside, without.

*a-m'id*, adv. In the middle.

*Am'i-da*, 1 am'i-da; 2 am'i-da, n. One of the five Buddhas of the present Kalpa, greatly honored in Japan.

am-<sup>1</sup>-mo-<sup>1</sup>-ni-a, 1 a-m-<sup>1</sup>-n-ia; 2 ā-m-<sup>1</sup>-ō-n-ia, n. 1. A solution of gaseous anhydrous ammonia (see def. 2) in water; spirits of hartshorn. According to the United States Pharmacopœia, ordinary water of ammonia should contain 10 per cent. by weight of the gas, and the "stronger water of ammonia" 25 per cent. Liquid ammonia; water of ammonia.  
2. A colorless pungent suffocating gas (NH<sub>3</sub>) found in small quantities in the air and in mineral waters, and obtained chiefly by the dry distillation of nitrogenous organic bodies, such as blood, coal, etc. It is very soluble in water, liquid ammonia, and solidifiable by cold and pressure, and strongly alkaline, combining with acids to form ammonium salts. It is used for artificial refrigeration, for the illumination of ICE-MACHINES and for motors. It is of great value as a fertilizer, principally in the form of ammonium sulfate; it is also largely employed in the arts and in medicine.  
Ammonia was known to the early alchemists in the form of the carbonate under the name of spiritus salis urinae. In the fifteenth century Basil Valentine showed that the same body may be obtained by the action of an alkali upon sal ammoniac; and Glauber, in the seventeenth century, discovered that spiritus salis ammoniaci. **am-mo'ni-fl-a-c'tion**, 1 a-mō'ni-fī-ċ'šan; 2 **ā-mō'ni-fī-ċā'shon**, *n.* The act or process of saturating with ammonia or an ammonium salt, as a soil or a fertilizer; also, the state of being so saturated. 2. The formation of ammonia, at the expense of other forms of nitrogen compounds, by the action of micro-organisms upon organic substances. [**< AMMONIA + L. facio, make.**]

**am-mo'ni-fy**, 1 a-mō'ni-fī; 2 **ā-mō'ni-fy**, *vt. & ri.* [**-FIEN; -FY'ING.**] To treat with ammonia; be subjected to ammonification. [**< AMMONIA + -FY.**]

**am-mo'ni-o-**, [1 a-mō'ni-o-, a-mō'no; 2 **ā-mō'ni-o-**, **ā-mō'no**] *a-mō'no*, *a-mō'no*; 2 **ā-mō'ni-o-**, **ā-mō'no**. From *ammonia*: combining forms used in chemistry and medicine; as, *ammonio-alumine*, containing ammonia and aluminum; *ammonio-acid*; *ammonio-calc*.

Words beginning with this prefix will be found in alphabetical place, either singly or in groups.

**am'mo'ni-on**, 1 am'ō-nai-on; 2 **ām'ō-ni-on**, *n.* *Chem.* The ammonium ion NH<sub>4</sub><sup>+</sup>. [**< AMMONIUM + ION.**]

**am-mo'ni-o-pla-tin'ic**, *a.* Composed of both ammonia and platinum.—**ammonio-platichlorid**, a crystalline, yellow precipitate, (NH<sub>4</sub>)<sub>2</sub>PtCl<sub>6</sub>, used in chemical analyses to precipitate ammonia or nitroge.

**am'mon-ite**, 1 am'en-ūt; 2 **ām'on-it**, *n.* Any fossil ammonite, cephalopod shell. Ammonites are common in Eocene and Mesozoic rocks of all parts of the world, and are usually ornamented outside with ribs, knobs, spines, etc., while the under layer is pearly, as in the nautilus. Some forms are between two and three feet broad.

The word is derived from the ancient Egyptian *Amen* or *Amon*, to whom the ram was sacred. It is from the form of the ram's horns of this deity that the fossil mollusk called *cornu ammonis* derives its name. See also the Greek *Ammon*, a form of Zeus with ram's horns, also called Jupiter-Ammon. Alexander the Great is represented on the coins of Lysimachus deified, with the horn of Ammon and diadem. **ALEXIA B. EDWARDS.**

And on the pavement lay  
Huge Ammonites, and the first bones of Time.

**Am'mon-ite'ss**, 1 -it'es; 2 -it'ēs, *n.* *Bib.* A woman Ammonite.

**am'mo'ni-ti-cone**, 1 am'ō-nol'ti-kōn; 2 **ām'ō-ni-ti-cōn**, *n.* *Falcon.* 1. *a.* Characterized by a symmetrical, compactly coiled shell like that of the ammonites. 2. *n.* The flat spirally coiled shell of some cephalopods, such as the ammonites. [**< AMMONITE + CONE.**]

**Am'mon-ite'ish**, 1 am'en-ūt'ish; 2 **ām'on-it'ish**, *i. g.* Of or pertaining to the Ammonites or their language. 2f. *n.* A Semitic language spoken by the Ammonites and said to have been very much akin to the Hebrew.

**Am-mo'ni-tol'de-a**, 1 a-men'ō-tol'de-a; 2 **ā-mō'ni-tol'de-a**, *n. pl. Conch.* 1. The *ammonites*. 2. A superfamily of ammonites with circumphonal area directed forward, including most of the species. [**< AMMONITE + -OID.**]

**am-mo'ni-tol'de-an**, *a. & n.*

**am-mo'ni-um**, 1 a-mō'ni-um; 2 **ā-mō'ni-ūm**, *n.* *Chem.* A hypothetical univalent alkaline radical (NH), acting chemically like a basic element analogous to potassium and sodium. [**< AMMONIA.**]—**ammonium amalgam**, a pasty, metal-like mass which results from the passage of an electric current through ammonium chlorid placed in contact with mercury at the negative electrode of a battery, or from pouring sodium amalgam into a solution of ammonium chlorid.—*a. bases*, bases formed by the replacement. In whole or in part, of the hydrogen of the ammonium group by other elements or radicals, as amines and amides.—*a. bichromate*, the ammonium salt of bichromic acid, (NH<sub>4</sub>)<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>.—*a. carbonate*. 1. A white solid consisting of a mixture of ammonium bicarbonate and ammonium carbonate. 2. *a. transverse*.—*a. transparent*, a compound crystalline salt. 2. *a. transparent*, a compound crystalline compound, (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>·H<sub>2</sub>O, smelling like ammonia.—*a. chloroplatinate*, same as **AMMONIOPLATINIC CHLORIDE**.—*a. cyanate*, a white solid (NH<sub>4</sub>OCCN) formed by treating cyanic acid with ammonia.—*a. hydroxide*, a compound (NH<sub>4</sub>OH), supposed to exist in ordinary aqueous or caustic ammonia.—*a. hydrate*.—*a. magnesium phosphate*, a crystalline salt (NH<sub>4</sub>MgPO<sub>4</sub>·6H<sub>2</sub>O), not readily soluble, occurring in urinary excretion, and employed in chemical analyses as an agent for removing magnesium.—*a. persulfate*, a salt, (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub>, extensively used in photography for reducing iron.—*a. phosphomolybdate*, a yellow crystalline compound of the form (NH<sub>4</sub>)<sub>3</sub>PO<sub>4</sub>·12MoO<sub>4</sub>, employed in chemical analysis.—*a. platino-*

chloride, same as AMMONIOPICLATIC CHLORAM.—a. sulfate, an important commercial salt, (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> manufactured from the ammoniacal liquor produced in the manufacture of gas. It is used as a nitrogenous fertilizer.—a. sulfid, a colorless crystalline compound (NH<sub>4</sub>)<sub>2</sub>S, formed by the combination of ammonia and hydrogen sulfid. It is unstable, but in solution it is a useful reagent in analytical chemistry.

And so hereby all is *amnestied* and finished.

CARLYLE *French Revolution* vol. II, p. 19. [n.]

m'm'es-ty, n. [-TIES, 1 -ty; 2 -tis, pl.] 1. An act of pardon or oblivion by which a government through its chief executive absolves a whole class or whole classes of offenders, without trial, from penalties and disabilities incurred, or pardons a whole class of offenses and all concerned therein.

To the executive alone is intrusted the power of pardon; and it is granted without limit. Pardon includes amnesty. It blots out the offense pardoned and removes its penal consequences.

U. S. Supreme Court Reports vol. xxx, p. 147.

The proclamation of the President extended unconditionally and without reservation a full pardon and amnesty for the offense of treason . . . with a restoration of all rights, privileges, and immunities and complete amnesty, and in general, all that can result to the claimant from both pardon and amnesty would equally have accrued to him if the term 'pardon' alone had been used in the proclamation.

U. S. Supreme Court Reports vol. xiv, p. 152-3.

Under the régime established in 1871, the right of amnesty in France, is reserved to the national assembly.

A. HÉBRAËN in *Cyc. of Polit. Science* vol. i, p. 89.

2. Any intentional forgetfulness or overlooking, especially of past wrong-doing or the like; as, peace should bring amnesty. [*< F. amnestie, < L. amnestia, < Gr. amnesia, < a-priv. + mnastai, remember.*]

Ernst absolute, acquittal, oblivion, pardon. *Acquittal* is removal of penalty from one who has been adjudged guilty. *Acquittal* is by the decision of a court, commonly of a jury; *pardon* is the act of the executive. An innocent man may demand *acquittal*, and need not plead for *pardon*. *Pardon* supposes an offense; yet, as our laws stand, to grant *pardon* is sometimes the only way to release one who has been wrongly convicted. *Oblivion*, from the Latin, signifies overlooking an offense, so that the offender stands before the law as if it had never been committed. *Amnesty* brings the same idea through the Greek. *Pardon* affects individuals; *amnesty* and *oblivion* are said of great numbers. *Pardon* is offense applied to the ordinary administration of law; *amnesty*, to national and military affairs. An *amnesty* is issued after war, insurrection, or rebellion; it is often granted by "an act of *oblivion*," and includes a full

pardon of all offenders who come within its provisions. Absolution is a religious word (compare synonyms for Absolve). Ant: penalty, punishment, retaliation, retribution, vengeance. Prep.: an amnesty to all the insurgents for all offenses.

Angle of Incidence (Negative).  
 $\alpha'c'u'$ , negative angle of incidence.

diagonal of plate may be used in measuring this angle.—a. **plate**, *n*. A plate having an L-shaped cross-section: 1. Used with other machine tools, an L-shaped plate provides a guide for the work, with holes or slots, through which bolts may be passed for clamping the work to the plate or chuck.—2. **apod**, *n*. The vine of the genus *Gonolobus* of the milkweed family (*Asclepiadaceae*), especially *G. tozari* of the southern United States: named from the angular fruit.—a. **rib**, *n*. A curved timber between those parts of an arched ceiling where the planes, if continued until they meet, would form an angle.—a. **shaft**, *n*. An angle-head enriched, as with a capital or base.—a. **staff**, *n*. An angular strip of wood protecting a salient angle of a wall. See **ANGLE-HEAD**.—a. **steel**, *n*. Steel rolled in bars having an L-shaped transverse section.—a. **stone**, *n*. In architecture, a quoins.—a. **tile**, *n*. A tile in an angle of a frame structure.—

**axial a.** 1. The angle between the two secondary optic axes of a biaxial crystal. 2. The angle between any two crystallographic axes.—**Broad a.,** the angle (denoted by  $\omega$ ) through which a plane triangle must be rotated about its vertices in turn, in order that its sides may contain a point within called a Brocard point. **H. Brocard,** French geometer; in the case of a polygon, the complement of half the angle

subtended by a side and having its vertex at the symmedian point.—**complementary angles**, two whose sum is a right angle, as AOB and BOC. See fig. 1, p. 108.—**concluded a** (*Surr.*), the common mean of the mean values of several observations of any angle.—**corresponding angles**, angles made by a secant with parallels, whose sides lie in the same direction from the vertices, as *E* and *C*, *A* and *G*, or *F* and *D* (fig. 2, p. 108).—**dihedral a**, 1. The relation of two intersecting planes, as measured by the difference in direction of perpendiculars to them. 2. *Acro*. The angle of the wings of an aeroplane when the tips are elevated above the center of gravity.—**diverging a**, the angle formed by a broad *V*.—**ORVILLE WRIGHT**,—**direction a** (*Moth.*), the angle produced by a given line having an axis of reference.—**eccentric a**, (of a point on an ellipse), the

angle made with the major axis by a radius of the circumscribing circle drawn to the point where a perpendicular to that axis through the given point meets the circle—external *a*. 1. An angle formed by a side of a polygon and an adjacent side produced, as at *A*. See fig. 3, p. 108. 2. One of the four outside angles (*E, F, G, H*, in fig. 2, p. 108) formed by a transversal cutting two parallels,—flying *a*. (*Aero.*) the least angle of descent at which an aeroplane can maintain flying speed by gravity alone. —*FLIGHTING* INVENTION; *FLIGHTING*; same as *FLIGHTING*. —*FLIGHTING* OF AN AEROPLANE; same as *FLIGHTING*. —*FLIGHTING* SECTION; cut from a standard

with beams or columns.—Inscribed *a.*, the angle between two chords from a point on a circle.—Interior *a.*, one of the four angles (*A, B, C, D*, in fig. 2, p. 108), made by a transversal cutting two parallel lines.—Internal *a.*—masthead *a.* (*Naut.*), an angle subtended by a ship's mast, used in conjunction with the masthead above the water, to determine the ship's distance.—meter *a.* (*Med.*), that angle which each visual axis makes with the median plane when the eyes are fixed on a point one meter distant.—nautical *a.* [*Archaeol.*], an instrument devised to show a vessel's departure, meridional difference, etc.—negative *a.* (*Geo.*), an angle measured below the horizontal.—negative *a.* of incidence (*Acro.*), an angle at which the pressure of the air is on the concave side of a curved surface, although the air meets the surface from the convex side as measured

from the chord of the curve (a peculiarity of curved surfaces). **ORVILLE WRIGHT.** Compare **ANGLE OF INCIDENCE**—**optic a.** 1. The visual angle, or angle formed at the organ of sight by two lines drawn from the extremities of an object of vision. 2. The angle formed by the visual axes of the eyes, varying with the distance of the object beheld. 3. In a biaxial crystal, the angle between the optic axes—outward *a.*, an exterior angle.—**parallaxic a.** (*Astron.*), the angle at a star made by a line from the zenith and another from the pole.—**permanent a.** (*Gunnery*), the fixed angle with a rifled gun's axis at which the sights are adjusted, to allow for the projectile's "drift" or deviation from a straight line.—**polyhedral a.**, a solid angle formed by the meeting of more than three planes; any angle of a polyhedron except a dihedral or trihedral angle.—**position a.** (*Astron.*), the angle that a line between two stars makes

with the meridian, counted from the north point through the east.—reentering *a*. (*Fort.*), an angle in a fortification, the point of which is turned toward the defended place, as distinguished from a *salient* or *projecting angle*.—reentrant *a.*, on angle whose vertex is directed toward the back or inside of the figure of which it forms a part.—solid *a.*, the figure formed by plane or curved surfaces passing through a point and intersecting a plane not containing the point in a closed curve or closed broken line: measured by the area intercepted on a sphere of unit radius described about the point as a center.—spherical *a.*, the angle formed by two great circles at their point of intersection and measured by the angle between their tangents at that point.—supplementary angles, two angles whose sum makes a straight angle, as AOB and BOD in fig. 1.—supplement *a.*, the angle:—tangent *a.*, in a circle, any angle between a tangent and a chord, as the angle tangencs—trihedra

**Angle**, *n.* One of the three different peoples of the British Isles, the Angles, the Saxons, and the Jutes. **Ang'le**, *n.* [Archais.] 1. A fish-hook, and sometimes also the line and rod; fishing-tackle. 2. The act of fishing with hook and line. 3†. An adroit deceiver; a stratagem.

**Ang'le**, *n.* One of a tribe belonging to the blond, blue-eyed (xanthochroic) division of the Indo-European race, that with others from the 5th century on emigrated from what is now Schleswig-Holstein to Britain, and from whose descendants the country came finally to be called Euroland (Angle-land).

an'-mal, n. 1. A sentient living organism broadly distinguished from a plant by incapacity to convert inorganic into organic matter; a sentient living being. Animals may usually be distinguished by taking food into a digestive cavity and by the power of voluntary motion, but it is impossible to establish absolute demarcation between plants and animals, the lowest forms of both lacking more and more of their respective characteristics and being distinguishable chiefly by their relations to other organisms. See ANIMAL KINGDOM; MAMMALIA; ZOOLOGY.

2. The most essential quality of all ten which makes every animal an animal, is that it has some mode or other of reproduction, of motion, and of respiration.

2. In a restricted sense, a sentient creature inferior to man; a brute; often limited to mammals.

He [Plutarch] was probably the first writer who advocated very strongly humanity to animals, on the broad ground of universal benevolence. LEXER *Hist. Eur. Morals* vol. i, p. 258. [A. 1886.]

3. A human being in whom the animal nature is pre-dominant. 4. pl. [Colloq.] Domestic quadrupeds, especially horses and oxen used in harness or under saddle. 5. [Slang, U. S.] A newly arrived cadet at the Military Academy at West Point. [L., <*a*. *anima*, breath.]

SYN.: beast, brute, creature. An animal is a sentient being, distinct from inanimate matter and from vegetable life on the one side and from mental and spiritual existence on the other. Thus man properly classified as an animal. Because the animal life is the lowest and rudest part of his being and that which he shares with inferior creatures, to call any individual man an animal is to imply that the animal nature has undue supremacy, and so is deep condemnation or utter insult. The brute is the animal viewed as dull to all finer feeling; the beast, which, according to the Greek derivation of the word, is the feeding creature, is looked upon as a being of appetites. To call a man a brute is to imply that he is unfeeling and cruel; to call him a beast is to indicate that he is vividly sensual. We speak of the cruel father as a brute to his children; of the drunkard as making a beast of himself. So firmly are these figurative senses established that we now incline to avoid applying the name of animal to any creature except a horse or dog, for which we have any affection; we prefer in such cases the word animal. Creature is a word of wide significance, including all the living things that God has created—plants, animals, angels, or men. The animals of a region are collectively called its fauna.—ANT: angel, man, mind, soul, spirit, vegetable.—an'-mal-flow'ery, n. *L. anziela* (-t-); < *anzius*; see ANXIOUS.] **anx-i'e-tude**; **anx'ious-ness**.  
*Syn.*: anguish, apprehension, care, concern, disquiet, disturbance, fear, foreboding, fretfulness, fretting, misgiving, perplexity, solicitude, trouble, worry. *Anxiety* is, according to its derivation, a choking *disquiet*, akin to *anguish*; *anxiety* is mental; *anguish* may be mental or physical; *anguish* is in regard to the known, *anxiety* in regard to the unknown; *anguish* is because of what has happened, *anxiety* because of what may happen. *Anxiety* refers to some future event, always suggesting hopeful possibility, and thus differing from *apprehension*, *fear*, *dread*, *foreboding*, *terror*, all of which may be quite despairing. In matters within our reach, *anxiety* always stirs the question whether something can not be done, and is thus a valuable spur to doings; in this respect it is allied to *care*. *Foreboding*, *dread*, etc., commonly incapacitate for all helpful thought or endeavor. *Worry* is a more petty, restless, and manifest *anxiety*; *anxiety* may be quiet and silent; *worry* is communicated to all around. *Solicitude* is a milder *anxiety*. *Fretting* or *fretfulness* is a weak complaining without thought of accomplishing or changing anything, but merely as a relief to one's own *disquiet*. *Perplexity* often involves *anxiety*, but may be quite free from it. A student may be perplexed regarding a translation, yet, if he has time enough, not at all anxious regarding it.—*Antipathy*, assurance, calmness, carelessness, confidence, ease, light-heartedness, nonchalance, satisfaction, tranquillity.—*Prep.*: anxiety for a friend's return; anxiety about, in regard to, concerning the future.—*Precedential anxiety* (*Pathol.*), same as *anxiety*.  
**anx'ious**, 1 onk'shus; 2 ănk'shūs, a. 1. Affected with anxiety; troubled, disquieted, or distressed in mind respecting some uncertain matter; subject to painful or disturbing suspense; as, *anxious* about a friend's safety. The last thing we need be *anxious* about is property. **Lowell Democracy and Other Addresses** p. 9. [in M. & Co. 1887.] None are so *anxious* as those who watch and wait. **Dickens's Old Curiosity Shop** vol. i, p. 105. [in A. & N. 1871.]  
**2.** Fright with or caused by solicitude or anxiety; worrying; distressing; as, *anxious* forebodings. **3.** Having the desire intently fixed; earnestly desirous; intent; eager; as, *anxious* to start on a journey; *anxious* to avoid mistakes. The bravest men are . . . the most *anxious* to avoid dangers. **Matthews Getting On in the World** p. 154. [in C. G. 1874.] [*L. anxius*, < *anogo*, distress.]  
*Syn.*: apprehensive, careful, concerned, disquieted, disturbed, fearful, perplexed, restless, solicitous, thoughtful, uneasy, worried. *See* **AFRAID**. Compare **ANXIETY**.  
**Ant.**: calm, careless, composed, easy, happy, peaceful, tranquil, trustful, unconcerned. **anxious seat** or **bench**, the seat, pew, or bench in some churches, particularly at revival meetings, appropriated to persons who signify their anxiety for salvation; hence, figuratively, suspense or anxiety in general.—**anx'ious-ly**, *adv.*—**anx'ious-ness**, n.  
**an'y**, 1 en'; 2 ɛn'y, a. 1. One, or a portion of, indefinitely and indifferently; n; on; some; said of a single person, thing, or part, of whatever kind, degree, or quantity, from among a number, class, or total; as, *if any person calls*; will you take *any* sugar? he will repair *any* damage. **2.** Some; said of several out of an actual or possible number, class, or total, without regard to whom, which, or how many of them; as, *if any of the family arrive*. [*L. AS. ănig*, one, any one, < ăn (see **ONE**); cp. G. *einiger*, some; 1 en'y; on'y. *Syn.*: see **EVERY**.—*any* one, any person.—at any rate, whatever may be the circumstances. In any case; anyhow.  
**an'y**, *pron.* One or some (indefinitely); one or more persons, things, or portions (indefinitely) out of a number; an indefinite demonstrative; as, did you see *any* of the boys? it was unknown to *any*; he would not take *any*. The soul is superior to its knowledge; wiser than *any* of its works. **Emerson's Essays, Over-Soul** first series, p. 229. [in M. & Co. 1890.]  
**an'y**, *adv.* To an indefinite extent or degree; somewhat; in the least; at all; used generally with comparatives; as, *any* better; *any* nearer; *any* more. *Any*, in colloquial negative and interrogative sentences, is used absolutely; as, did you hurt yourself *any*? This use (hurt yourself *any*?) is common in the United States and parts of Canada.  
**an'y-body**, 1 en'-bəd'; 2 ɛn'y-bəd'y, *pron.* 1. Any person whatever (taken at random); *any* one; esp., any person raised above the common mass of humanity: an indefinite demonstrative; as, be could not harm *anybody*; he never will be *anybody*. Formerly written *ns* two separate words, but when now so written *body* has its ordinary sense; *os*, the momentum of *any* body is the resultant of its weight and velocity. **2.** [*-bodies*, pl.] Any common or ordinary person: a substantive use; *ns*, several obscure *anybodies*.  
**an'y-how**, 1 en'-bau'; 2 ɛn'y-bow', *adv.* 1. In any way whatever; by any means; however that may be; notwithstanding; in any case: used sometimes conjunctively; as, *anyhow*, I mean to go. **2.** In a careless or indifferent manner; as, he rambled through his task *anyhow*.  
**an'y-one**, n. Any one; erroneous form.  
**an'y-thing**, 1 en'-thiŋ; 2 ɛn'y-thiŋ, *pron.* 1. A thing or matter of any sort or importance whatever; something or other: an indefinite demonstrative; *ns*, I will do *anything*; he did not bring *anything*; originally written as two words, but when now so written laying stress upon *thing* as opposed to *person*; as, could any *thing* be as insane as the drunkard? There was never *anything* that did not proceed from a thought. **Emerson's Lect. and Biog. Sketches** p. 258. [in M. & Co. 1889.] **2.** A thing of any kind: a substantive use; as, he has *any* way, *any* thing—*anything* but, by no means; far from: *as anything but safe*—*a. like*, nearly approaching; as, it will not bring *anything like* a fair price.—*a. a. like* *a.* [*Colloq.*], exceedingly.—*if a., if at all*; if there is any difference; as, *if anything*, a Judas is worse than a Nero.—**an'y-thing-a-r'**, *an*, n. One having no positive belief; one who is anything in creed: an indifferentist.—**ism**, n.  
**an'y-thing**, *adv.* [*Archais.*] To any degree; in any way.  
**an'y-way**, 1 en'-wē; 2 ɛn'y-wā, *adv.* 1. No matter what happens; in any event; whether wanted or not; as, I'll do it *anyway*. **2.** At all events; anyhow; nevertheless: used conjunctively; as, *anyway*, he had to pay it. **an'y-ways**; [*Erroneous*].  
**an'y-when**, 1 en'-hwen; 2 ɛn'y-hwēn, *adv.* [*Rare*] At any time whatever.  
**an'y-where**, 1 en'-hwā; 2 ɛn'y-hwēr, *adv.* In or at any place whatever. **an'y-where's**; [*Erroneous*].  
**an'y-whith'er**, 1 en'-hwith'er; 2 ɛn'y-hwith'er, *adv.* To or toward any place; in any direction whatever.  
**an'y-wise**, 1 en'-wōiz; 2 ɛn'y-wis, *adv.* In any manner; to any degree; as, nor is he *anywise* a good neighbor.

Compare *GRACE-NOTE*, under *GRACE*. *a-png'ta-tu'ra*. There are two kinds of appoggiaturas: (1) the *long*, which is accented and borrows its time from the following note; and (2) the *short*, which is unaccented and represented by either an eighth or a sixteenth note with an oblique stroke crossing its stem. The modern tendency seems to be to take the time of the short appoggiatura from the preceding note, except where this would lead to false progressions.—double appoggiatura (*mus.*), a melodic ornament consisting of two grace-notes preceding a principal note, the time required for both being deducted from the latter.  
*p'p'oint*, *p'p'oint'*, 1 a'p-p'oint; 2 a'p-p'oint', r. 1. *L.* 1. To designate, fix upon, or select as being the person or subject for some position, object, or the like; assign; as, to appoint a postmaster.

**ar-ma'-ture**, 1 **ar-ma'-chur** or **-tūr**; 2 **ar-ma'-chur** or **-tūr**, *n.* 1. *Elec.* (1) A piece of soft iron joining the poles of a horseshoe magnet; a keeper. (2) A core of laminated metal surrounded by a coil of wire or other conducting medium, rotating near the poles of a magnet in a dynamo-electric or a magneto-electric machine. See **DYNAMO**.

The work of the armature core is twofold. It acts as a portion of the magnetic circuit, conducting the lines of force, and by virtue of its high permeability or multiplying power concentrating a number of the lines of force through its own substance. It next acts as a support for the wires which are to be swept through the field of force. **SLOAN'S Standard Electrical Dictionary**.

Some dynamo-armatures are named from (1) their shape; as, cylindrical armature, drum *a.*, girder *a.*, spherical *a.*, or (2) their construction or winding; as, bar *a.* (*Elec.*), an armature with inductors of copper bars, instead of copper wire; disk *a.*, multipolar *a.*, polarized *a.*, ring *a.*, shuttle *a.*, unipolar *a.*

The brushes which are applied to the armature are maintained at different potentials when the machine is in action.

war (1855). The thickness increased to 12 inches by 1872. In 1876 wrought iron was replaced by steel. Steel-faced compound plates were made by the Wilson process and by the Eills process. The Harvey process was generally adopted in 1891, and this was later superseded by the Krupp process. Krupp armor has about 15 per cent. greater resisting power than Harvey armor, while the latter is equal to double the thickness of wrought iron. Armor for fortifications is largely made by the Gruson process, and consists of heavy blocks of chilled cast iron.

The French were the first to apply in a practical shape the idea (which . . . originated in the United States) of reviving the use of armor, and placing it on the sides of ships.

**ar-sen'ic**, 1 a-rs-en'ik; 2 a-rs-en'ic, a. Chem. Pertaining to or containing arsenic, especially when combined in its pentad valence; as, arsenic acid (As<sub>2</sub>O<sub>5</sub>), arsenic sulfide (As<sub>2</sub>S<sub>3</sub>). Compare ARSENIOUS. — **ar-sen'i-cal** — **ar-sen'ic** used, 1. colorless white crystalline compound (H<sub>3</sub>AsO<sub>4</sub>) used in calico-printing. Called more properly arsenic hydrate. 2. Formerly, arsenic pentoxide (As<sub>2</sub>O<sub>5</sub>).

**ar-se-nic**, 1 a-rs-nik; 2 a-rs-nic (xun), n. Chem. 1. A steel-gray, brittle, volatile, non-metallic element. See table under ELEMENT. 2. The white, tasteless, poisonous arsenious acid (As<sub>2</sub>O<sub>3</sub>). Arsenic trioxide; arsenious anhydride. 3. Orpiment; sometimes, realgar. [F. < L. *arsenicum*, < Gr. *arsenikon*, < *arsen*, male.] — **ar-sen'ic black**, n. See table under BLACK, n. — a. antidote, n. Chem. Hydrated ferric oxide and magnesia. — a. disulfide, a red or yellow compound (As<sub>2</sub>S<sub>2</sub>) found native as realgar, but usually manufactured artificially; used in the industrial arts. — a. hydride, 1. Arsenic. 2. A brown solid (AsH<sub>3</sub>) produced from sodium arsenide. — a. pentasulfide, a yellow solid (As<sub>2</sub>S<sub>5</sub>) produced when an arsenic acid solution is treated with hydrogen sulfide. — a. pentoxide, a white compound (As<sub>2</sub>O<sub>5</sub>), produced when arsenic acid is heated. — a. trihydride, a oily colorless compound (AsH<sub>3</sub>) which is extremely poisonous. — a. trisulfide (Chem.), same as ARSENIC YELLOW. See table under YELLOW. — flowers of a., the fine white powder formed when arsenic trioxide (As<sub>2</sub>O<sub>3</sub>) is sublimed. — red a., same as REALGAR. — white a., same as ARSENIC. — **ar-sen'i-ate**, n. To combine or treat with arsenic; give arsenical nature to. — **ar-sen'i-cal-ize**; **ar-sen'i-elst**; **ar-sen'i-elst**; **ar-sen'i-elst**, n. Same as ARSENOLYSIS. — **ar-sen'i-clite**, n. Mineral. Same as PHARMACOLITE. — **ar-sen'i-coph-a-gy**, n. The habit of eating arsenic. — **ar'se-nif'er-ous**, a. Containing or yielding arsenic.

**ar-sen'teal**, 1 a-rs-en'teal; 2 a-rs-en'teal, n. Any preparation of arsenic used as an insecticide.

**ar-se-nide**, 1 a-rs-nid, -nid or -noid; 2 a-rs-nid, -nid or -noid, n. Chem. A compound of arsenic, in which arsenic is the negative element; as, cobalt arsenide (CoAs<sub>2</sub>).

**ar-se-ni-flo**, 1 a-rs-ni-flo; 2 a-rs-ni-flo, n. The granular variety of Chilean atacamite as it appears in commerce.

**ar-se-ni-o-pl'e-tic**, 1 a-rs-ni-o-pl'e-tic; 2 a-rs-ni-o-pl'e-tic, n. Mineral. A red-brown hydrous manganese arsenate; usually massive. [*< ARSENATE* + *Gr. pletos*, full].

**ar-se-ni-o-sid'er-ite**, 1 a-rs-ni-o-sid'er-ite; 2 a-rs-ni-o-sid'er-ite, n. Mineral. A brown yellowish-brown arsenate (H<sub>2</sub>CaFeAsO<sub>6</sub>), crystallizing in the tetragonal or hexagonal system. [*< ARSENATE* + *Gr. sideros*, iron].

**ar-se-ni-ous**, 1 a-rs-ni-ous; 2 a-rs-ni-ous, a. Chem. Of, pertaining to, or containing arsenic, especially when combined in its triad valence; as, arsenious acid (As<sub>2</sub>O<sub>3</sub>); arsenious sulfide (As<sub>2</sub>S<sub>3</sub>). — **ar-se-nous**; **arsenous** acid, a. A white crystalline compound (H<sub>3</sub>AsO<sub>4</sub>). 2. Formerly, arsenious oxide. — a. anhydride, a. n. id., arsenic trioxide. See ARSENIC, n.

**ar-se-nism**, 1 a-rs-nizm; 2 a-rs-nizm, n. Chronic **ar-se-nite**, 1 a-rs-nit; 2 a-rs-nit, n. 1. Chem. A salt of arsenious acid. 2. Mineral. Same as ARSENOLITE.

**ar-se-ni-um**, 1 a-rs-ni-um; 2 a-rs-ni-um, n. Chem. Arsenic. — **ar-se-ni-u-ret**, 1 a-rs-ni-u-ret; 2 a-rs-ni-u-ret, n. Chem. Arsenic. — **ar-se-ni-u-rett**; **ar-se-ni-u-rett**, a. Chem. Chemically combined with arsenic to form an arsenide; as, arsenureted hydrogen. — **ar-se-ni-u-rett**; **ar-se-ni-u-rett**, n.

**ar-se-ni-u-blast**, 1 a-rs-ni-u-blast; 2 a-rs-ni-u-blast, n. Embryol. One of the hypothetical male elements into which a sexual cell (genoblast) is supposed to separate.

In both cases the sexual cell separates into a single female element or thelyblast, and probably two male elements or arsenoblasts, which are capable of multiplication by division.

C. S. MIXON *Human Embryology* p. 78.

[< Gr. *arsen*, male, & *blastos*, germ.]

**ar-se-no-lam'prite**, 1 a-rs-no-lam'prite; 2 a-rs-no-lam'prite, n. Mineral. A metallic lead-gray variety of native arsenic containing bismuth. [*< ARSENIC* + *Gr. lampros*, bright].

**ar-sen'o-lite**, 1 a-rs-en'o-lit; 2 a-rs-en'o-lit, n. Mineral. A white arsenious acid (As<sub>2</sub>O<sub>3</sub>) with occasional yellow or red tinge, crystallizing in the isometric system. [*< ARSENIC* + *Gr. litē*, stone].

**ar-sen'o-pyrite**, 1 a-rs-en'o-pyrit; 2 a-rs-en'o-pyrit, n. Mineral. A silver-white iron sulfarsenide (FeAsS<sub>2</sub>), that crystallizes in the orthorhombic system. [*< ARSENIC* + *Gr. pyritē*, fire].

**ar-se-tes**, 1 a-rs-tēz; 2 a-rs-tēs, n. In Tasso's *Jerusalem Delivered*, an aged eunuch, foster-father to Clorinda.

**ar'sha rite**, 1 a-rs-sha; 2 a-rs-sha, a Hindu marriage form requiring the gift of at least one cow and one bull from the bridegroom to the bride's father. [*< Sans. arsha*].

**ar-shin**, 1 a-rs-shin; 2 a-rs-shin, n. [Russ.] An Eastern measure of length, varying in different places from about 28 to 39 inches. See MEASURE. — **ar-shin'ly**; **ar-sheen'y**; **ar-shine'y**.

**ar'sin**, 1 a-rs-in, -sin or -sin; 2 a-rs-in, -sin or -sin, n. **ar'sine**, n. Chem. 1. A compound formed by replacing the hydrogen of arsenureted hydrogen with an organic radical; as, methyl arsin, (CH<sub>3</sub>)<sub>3</sub>As. 2. Arsenureted hydrogen (AsH<sub>3</sub>). [*< ARSENIC* + *Gr. sin*, to breathe].

**ar-sin'ic**, 1 a-rs-in'ic; 2 a-rs-in'ic, a. Chem. Relating to or naming any of a series of acids obtained from arsenic acid by substituting univalent hydrocarbon radicals for two hydroxyl groups; general formula, RRA<sub>2</sub>O<sub>2</sub>H.

**Ar-sin'o-e**, 1 a-rs-in'o-e; 2 a-rs-in'o-e, n. 1. The daughter of Ptolemy I., king of Egypt (born 316 B. C.); wife of Lycabubus, and of her own brother, Ptolemy II. 2. In Molière's *Le Misanthrope*, a prude. 3. Same as MENESTER-FATUM.

**Ar'sl-no-l-the-ri-um**, 1 a-rs-nō-l-thē-ri-um; 2 a-rs-nō-l-thē-ri-um, n. *Palcos*. A genus of gigantic Eocene mammals, the remains of which were discovered in the desert of the Fayoum in western Egypt. The group is allied to the diacodons and may be classed with the *Amblypoda*, having elephantine feet with the cuboid supporting the navicular. The earliest and typical species (*Arsinoitherium zittelii*) has two pairs of protuberances on the upper part of the head. Another Egyptian species (*A. kingi*) is larger. [*< Gr. Arsinoe*, daughter of Ptolemy I., king of Egypt, + *thērion*, wild beast].

**Ar'sl-phu'rith**, 1 a-rs-nū-th; 2 a-rs-nū-th, n. Btd. **ar'sis**, 1 a-rs-is; 2 a-rs-is, n. [-ēs, 1 -s; 2 -sēs, pl.] 1. Pros. (1) The syllable that receives the ictus or stress of voice, as opposed to the *thesis*; also, the stress itself; the ictus. See ICTUS.

The emphasis with which . . . parts of a verse are pronounced is called the *arsis*. . . also, the syllable on which the emphasis falls. KUTNER *Gr. Gram.* tr. by Edwards, p. 574. [A. 1853.]

(2) In the original Greek usage, the raising of the foot in beating time, and hence the metrically unaccented part of the foot; the reverse of modern usage. 2. Mus. The up beat in beating time; the unaccented part of a bar.

3. Physics. A periodic rhythmical variation in the intensity of sound. [L. < Gr. *arsis*, < *airō*, raise.]

**ars-po-et'ic**, 1 a-rs-po-et'ic; 2 a-rs-po-et'ic, n. [L.] 1. The poetic art. 2. [A. P.] The title of a versified epistle by Horace to the Pisos which is characterized by correct reasoning and apt expression. 3. A masterly commentary on the art of poetry.

**art**, 1 ārt; 2 ād per. sing. pres. ind. of BE, v. Now used in poetry and elevated language, "thou art" having been superseded by "you are."

Art thou that traitor-angel, art thou he,  
 Who first broke peace in heaven? MILTON P. L. bk. ii, l. 689.

[< AS. *art*; cp. *ARE*, v.]

**art**, n. 1. To assist; urge.

**art**, n. 1. Practice or guided by correct principles in the use of means for the attainment of a desired end. (1) Skill in applying knowledge or ability to the accomplishment of a concrete purpose; as, the art employed in producing a poem.

And sleights of art and feats of strength went round.  
 GOLDSMITH *Deserted Village* l. 22.

There is no art so divine as that of . . . quickening other minds.  
 CHANNING *Works*, Ministry for Poor p. 84. [A. V. A. 1883.]

(2) A system of rules devised for procuring some scientific, esthetic, or practical result; also, the mastery of such rules; by extension, a branch of learning to be studied in order to be applied; as, the art of arithmetic; the several liberal arts of the schoolroom.

An art will, in particular, present exercises for the practical application of its rules, which would be entirely foreign to the design . . . of a science. DAY *Art of Discourse*, p. 2. [A. 1867.]

(3) Facility resulting from practise; dexterity; hence, power.

Still sways their souls with that commanding art  
 That dazzles, leads, yet chills the vulgar heart.  
 BYRON *Corcoran* act. 1, st. 8.

2. *Esthetics*. (1) The principles of artistic construction and esthetic criticism; the application of the principles of esthetics to the study, criticism, and production of artistic works. (2) The embodiment of beautiful thought in sensuous forms, as in marble or speech; artistic construction or expression.

Art is the external manifestation of the idea, the revelation of the invisible reality through the senses.  
 W. S. LILLY *On Right and Wrong* ch. 10, p. 228. [C. & H. 1890.]

(3) The embodiment in concrete and sensuous forms, as in marble, wood, tones, or language, of thoughts expressive, and feelings appreciative, of the beautiful.

The arts are distinguished as the esthetic or fine arts, or arts of beauty, and the useful, industrial, or mechanic arts, or arts of utility. The useful arts include the trades, which require chiefly manual labor or skill, and which engage the ingenuity of the artisan; the fine arts, those which call for the exercise of taste and imagination, and which furnish the sphere of the artist. The fine arts may be classed in general as (1) the free, whose object is to create form for its own sake, embracing painting, engraving, sculpture, music, and poetry; and (2) the dependent, whose object is to create form that shall minister to some utility, embracing architecture, landscape-gardening, decoration, ceramics, glass-making, the goldsmith's art, and other applications of the principles of artistic construction or arrangement. The fine arts are further divided according to the kind of material which they employ, as landscape-gardening, architecture, sculpture, painting, and poetry, or prose dramatic literature. It will be noticed that this classification is based chiefly on the plasticity of the material.

While manufacture is the work of hands only, art is the work of the whole spirit of man.  
 RUSKIN *Queen of the Air* pt. iii, p. 121, [S. & CO. 1869.]

## ARTERIAL SYSTEM OF MAN.

The numbers preceding the names refer to the corresponding numbers upon the illustrations.

Two arterial trunks arise from the heart: the pulmonary artery from the right side (see 1 in illus.), distributed by right and left branches (see 2 and 3 in illus.) to the lungs, and the aorta from the left side, distributed to all other parts of the body. It is from the latter that the arteries having special names are derived. The principal branches are given below.

The style of type is intended to indicate approximately the size of vessels, as follows:

**Boldface** = 1/2 inch in diameter or larger  
**CAPS AND SMALL CAPS** = 1/4 inch in diameter  
**SMALL CAPS** = 1/8 inch in diameter  
*Italics* = 1/16 inch in diameter  
**Roman** = 1/32 inch in diameter or smaller

The style of letters prefixed to the names indicates the order of derivation, as

A, B, C, etc. = a branch  
 A, B, C, etc. = a branch of a branch  
 a, b, c, etc. = a branch of a branch of a branch  
 a, b, c, etc. = a branch of a branch of a branch of a branch

5. *Ecol.* A major division of a formation in plant geography; consocios. 6. [U. S.] An organized but unchartered body analogous to but distinguished legally from a corporation.

Syn.: alliance, club, community, companionship, company, confederacy, confederation, conjunction, connection, corporation, familiarity, federation, fellowship, fraternity, friendship, lodge, partnership, society, union. We speak of an alliance of nations, a club of pleasure-seekers, a community of Shakers, a company of soldiers or of friends, a confederacy, confederation, federation, or union of separate states under one general government, a partnership or company of business men, a conjunction of planets. The whole body of Freemasons constitute a *fraternity*; one of their local organizations is called a *lodge*. A corporation or company is formed for purposes of business; an association or society (the also incorporated) is for learning, literature, benevolence, religion, etc. Compare synonyms for acquaintance; ASSOCIATE; FRIENDSHIP.—Anti: disintegration, independence, isolation, separation, solitude.—PREF.: an association of scholars for the advancement of knowledge; association with the good is ennobling.

American Protective Association. [U. S.] The official title of a secret society, formed in the State of Iowa in 1887, with the avowed purpose of protecting American institutions by endeavoring to cause the exclusion of Roman Catholics from public office; usually abbreviated A. P. A.—a. cultuelles [F.], literally, associations for worship; especially (F. Hist.), non-sectarian associations for public worship authorized by the Separation Law of Dec. 9, 1905, which empowered the associations to hold the churches and church property, the former for the total period of their existence, the latter only for a time.

By the Encyclical . . . of 10 August, 1906, the pope forbade the formation of these associations cultuelles.

—a. fibers, fibers that unite different, but not widely separated, areas of the cerebrospinal axis on the same side, as in the brain or the spinal cord.—a. football [Gt. Brit.], the game in which all players but the goal-keepers are forbidden to handle the ball while in play; soccer. See FOOTBALL.—a. of Ideas. Psychol. That aspect of the process of mental reproduction which is thought to explain why present states of consciousness occur in pairs or series resembling those which have been connected in past states of consciousness.

The phrase 'association of' is fitted to mark the bare fact that complex ideas, which had a more or less independent origin, are in the habit of recurring in regular sequences (in pairs, or threes, or series of larger numbers). G. T. LADD Psychol. Descriptive and Explanatory p. 263. [s. 1894.]

2. The tendency of any conscious state or process to recall others that have previously been associated with it in consciousness. Locke, who invented this phrase, and his followers in Great Britain and France, used it as the name of an active influence which was exerted by so-called ideas as such. The observed facts of the mental life are now, however, much better interpreted by a psychology which studies them as coming under the physiological and psychical conditions of mental synthesis, the formation of habits, etc. Thus the association may be of so intimate and unanalyzable a character as to be more properly called a *fusion*, in which sense of the words no perception of a complex object would be possible without the association of ideas. Others would limit the term to the connection of universals in the processes of thought.—a. philosophy, see ASSOCIATIONISM.

—a. time, n. Psychophysics. The time supposed to be required for the central nervous processes connected with mental association; the time of associative reaction as distinguished from simple reaction.—laws of a., the principles that regulate the connection and recurrence of ideas in the mental processes of reproduction and representation. They include (1) the primary laws, those which hold true in every kind; and (2) the secondary laws (laws of preference), those which decide why one associated idea rather than another recurs in consciousness. Various attempts have been made to bring all cases of association of ideas under one law.

as-sol'mant, 1 a-sō'll'mānt; 2 ā-sō'll'mānt, n. Jean Baptiste Alfred (?/1827-1886). A French author.

as-som'molr, L. 1 ā-sō'm-wā; 2 ā-sō'm-wā, n. A novel by Emile Zola, published in 1877, exemplifying the evils of drink, in which the heroine, Gervaise, after being abandoned with her two children by her lover, Lantier, makes a brave

fight to support them and herself as a washerwoman. A zinc-worker, Coupeau, persuades her to marry him. They prosper, when he is disabled by an accident. Their savings are swallowed up and Coupeau, recovering, meets Lantier, whom he brings to his home. Impelled by the knowledge that he has been the cause of the renewal of the previous relations between his wife and Lantier, Coupeau takes to drink and dies of delirium tremens. The title is a slang French term for "huldugeon," and is used figuratively for a low drinking-house. The book was dramatized and a play produced in Paris in 1879.

as-so-nance, 1 a-sō-nans; 2 ā-sō-nang, n. 1. Resemblance or correspondence in sound; hence, resemblance or correspondence in other respects; also, its result. Cleopas, or Chappai, is a Hebrew name, of which Alphaeus is the current assonance adopted for intercourse with the Gentile world.

FARRAR Early Days of Christianity p. 269 [w. p. n.]

2. Pros. Correspondence of the accented vowels, but not of the consonants, in riming syllables; used in Spanish and Italian poetry; also, the imperfect rhyme so formed, as in verses ended with roaming and floating.

In their lighter poetry the Spaniards frequently contented themselves with assonance, that is, with the correspondence of final syllables, wherein the vowel alone was the same.

pretend; outwardly seem: often with the infinitive to be; as, to assume a virtuous air; to assume to be deaf. 6. To receive; adopt. 6. Logic. To add as a minor premise. 7. [Archaic.] To take in; subsume.

II. 1. To be presumptuous. < L. assumo, < ad, to, + sumo, take (< sub, under, + emo, buy.)

Syn.: accept, affect, appropriate, arrogate, claim, feign, postulate, presume, pretend, put on, take, usurp. The distinctive idea of assume is to take by one's own independent volition, whether well or ill, rightfully or wrongfully. One may accept an obligation or assume an authority that properly belongs to him, or he may assume an obligation or indebtedness that could not be required of him. He may assume authority or office that is his right; if he assumes what does not belong to him, he is said to arrogate or usurp it. A man may usurp the substance of power in the most unpretending way; what he arrogates to himself he assumes with a haughty and overbearing manner. One assumes the robes or insignia of office by pulling them on, with or without right. If he takes to himself the credit and appearance of qualities he does not possess, he is said to affect or feign or to pretend to the character he thus assumes. What a de-hater postulates he openly states and takes for granted without proof; what he assumes he may take for granted without mention. A favorite trick of the sophist is quietly to assume as true what would at once be challenged if expressly stated. What a man claims he asserts his right to take; what he assumes he takes.

—assume'ly, adv. Capable of being assumed.—assume'ly, adv. 1. Taken for granted; conceded; as, an assumed premise. 2. Pretended; fictitious; as, an assumed name.—as-sum'ed-ly, adv.—as-sum'ent, n. 1. An addition. 2. One who assumes or takes.—as-sum'er, n.—as-sum'ing, n. Disposed to arrogate to oneself more than is proper; presumptuous; arrogant.—as-sum'ing-ly, adv.—as-sum'ing-ness, n.

as-sump'sit, 1 a-sump'sit; 2 ā-sump'sit, n. Law. 1.

An obligation not under seal. 2. A form of action at common law to enforce an obligation not under seal. Assumpsits are known from the purposes to which they are applied: express or special assumpsit, one in which the purpose is to secure damages on a contract not under seal; general or common a., one in which the purpose is to secure liquidated damages, as in express contracts and, by extension, often in cases involving financial obligations not recoverable as damages. [L., 3d per s. perf. ind. act. of assume; see ASSUME.]

as-sump'tion, 1 a-sump'shon; 2 ā-sump'shon, n. 1.

The act of assuming, or that which is assumed; a taking for granted, or that which is taken for granted; postulate; esp., a taking for granted without reason or warrant; supposition; as, all science is based on the assumption of causation. Nothing is more injurious in science than assumptions which do not rest on a broad basis of fact.

as-tu'clous; -as-tu'clous-ly, adv. -as-tu'cl-ty, n. Astuteness.

as-tu'cl-ty, n. To astute.

As-tu'ri-an, 1 as-tu'ri-an; 2 as-tu'ri-an. I. a. Of or pertaining to Asturias. II. n. An inhabitant of Asturias. As-tur-ian rose (*Pahol*), an akin-disease resembling leprosy, peculiar to Asturias. See PELLAGRA.

As-tu'ri-as, 1 as-tu'ri-as; 2 as-tu'ri-as. n. 1. A former province in N. W. Spain, named Oviedo province in 1833. 2. A town in Cebu, P. I.

As-tu'ri-na, 1 as-tu'ri-na; 2 as-tu'ri-na. n. pl. *Ornith.* A group of raptorial birds, variously ranked and limited, but always including the goshawks; the *Accipitrinae*. As-tur, n. (t. g.) [*L. nstur*, goshawk.] -as-tu'ri-na, a. & n.

as-tute', 1 as-tute'; 2 as-tute'. a. Keen in discernment; having acute penetration; sharp-sighted. [*L. astutus*, < *astus*, cunning.] -as-tute'-ly, adv. -as-tute'-ness, n.

Syn: acute, crafty, cunning, discerning, discriminating, keen, knowing, penetrating, penetrative, sagacious, sharp, abreast, subtle, subtle. *Acute*, from the Latin, suggests the sharpness of the needle's point; *keen*, from the Saxons, the sharpness of the cutting edge. *Astute* has come to have a meaning that combines the sense of *acute* or *keen* with that of *sagacious*. The *astute* mind adds to *acuteness* and *keenness* an element of cunning or shrewdness. This *astute* character leads his opponent into a snare by getting them to make admissions or urge arguments, of which he sees a result that they do not perceive. The *acute*, *keen* intellect may take no special advantage of these qualities; the *astute* mind has always a point to make for itself, and seldom fails to make it. -Ant: blind, dull, idiotic, imbecile, shallow, short-sighted, stupid, stupid.

As-ty'a-ges, 1 as-ty'a-ges; 2 as-ty'a-ges. n. Last king of Media (584-560 B. C.), dethroned by his grandson, Cyrus the Great.

a-swim', 1 a-swim'; 2 a-swim'. adv. & a. Afloat; swimming.

a-swing', 1 a-swing'; 2 a-swing'. adv. & a. Swinging.

lege. See EXTRATERRITORIALITY. [*L.*, < *Gr. asylon*, < *a-* priv. + *syon*, right of seizure.] -right of asylum, the right on which recognized for Greek and some other sanctuaries, and for Christian churches, monasteries, etc., of protecting from molestation any one who fled to them.

as'ym-ho'll-a, 1 as'ym-ho'll-a; 2 as'ym-ho'll-a. n. Inability to understand the meaning of objects, due to cerebral disorder; especially, the loss of power to appreciate the signs or symbols of thought. [*L.*, not, + *symbol*.]

a'sym-ho'll-e, 1 a'sym-ho'll-e; 2 a'sym-ho'll-e. a. Not symmetrical. a'sym-ho'll-cal, 1 a'sym-ho'll-cal; 2 a'sym-ho'll-cal. a. Not symmetrical.

a'sym-me-tran'thus, 1 a'sym-me-tran'thus; 2 a'sym-me-tran'thus. n. *Bot.* Having the flowers asymmetrical. [*Gr. asymmetria* + *Gr. anthos*, flower.]

a'sym-met'ric, 1 a'sym-met'ric; 2 a'sym-met'ric. a. 1. Without proper proportion of parts; unbalanced. 2. *Org. Chem.* Designating any benzene-produced compound when three hydrogen atoms (only two of which are adjacent) are replaced by similar atoms or radicals.

If the same radical is substituted for all three atoms of hydrogen, there may be formed three isomeric substitution compounds; thus, there are three *tribromobenzenes*, *C<sub>6</sub>H<sub>3</sub>Br<sub>3</sub>*, distinguished as *ortho* (1, 2), *meta* (1, 3), and *para* (1, 4), fusing at 110° C., 128° C., and 146° C., respectively.

3. *Crystal.* Not divisible into similar halves by a plane; trichlinic. 4. Absolutely devoid of attempt to be symmetrical; distinguished by Herbert Spencer from unsymmetrical. 5. *Math.* Not commensurable. 6. Not reconcilable. a-sym-me-tral, a-sym-me-tron, a-sym-met'ric carbon atom (*Chem.*), a tetraavalent carbon atom which is combined with four dissimilar groups or atoms. See ATENEOSOMERISM.

Compounds which act on polarized light contain one or more asymmetric carbon atoms, that is, carbon atoms linked to four dissimilar radicals. C. L. BLOOM *Chemistry* p. 740 [p. n. & co. 1890].

-a, a system, see CRYSTALLIZATION. -a'sym-met'ric-cal-ly, adv.

a'sym-me-tro-car'pous, 1 a'sym-me-tro-car'pous; 2 a'sym-me-tro-car'pous. n. *Bot.* Having the fruit asymmetrical. [*Gr. asymmetria* + *Gr. karpos*, fruit.]

a'sym-me-try, 1 a'sym-me-try; 2 a'sym-me-try. n. 1. Absence of symmetry or proportion. 2. Want of coordination of interrelated parts, as of the eyes. 3. *Chem.* Lack of symmetrical arrangement of particular atoms in the molecule of a compound substance. 4. *Math.* Incommensurability. [*Gr. asymmetria*, < *a-* priv. + *symmetria*, see SYMMETRY.]

a'sym-phy-note, 1 a'sym-phy-note; 2 a'sym-phy-note. a. *Conch.* Not soldered at the hinge, as the valves of most river-mussels. Compare SYMPHYNOTE. [*L.*, < *a-* priv. + *symphyon*, see SYMPHYSE.]

as'ym-ptote, 1 as'ym-ptote; 2 as'ym-ptote. n. *Math.* A right line which an infinite branch of a curve continually approaches but does not reach, and which can be regarded as a tangent to the curve at infinity. [*Gr. asymptotes*, < *a-* priv. + *syn*, together, + *ptōs*, fall.] -parabole asymptote, a parabola which touches the cubic of infinity in a 5-politic contact. -as'ym-ptot-ty, n. The quality of being asymptotic. [*M.*] -as'ym-ptot'ic, a. Of or pertaining to an asymptote; approaching a state slowly but unceasingly, as a curve approaches its asymptote. as'ym-ptot'ic-cal, 1 as'ym-ptot'ic-cal; 2 as'ym-ptot'ic-cal. adv.

a'sym-ar-tete, 1 a'sym-ar-tete; 2 a'sym-ar-tete. n. 1. Not fitted together; unconnected; incongruous. 2. *Ant. Pros.* (1) Composed of differing meters. (2) Having interlarded catalexis at either the ending or beginning of the sections of a verse. [*Gr. asymmetros*, < *a-* priv. + *syn*, together, + *artōs*, join.] -a'sym-ar-tet'ic, adv.

a'sym-chro-nism, 1 a'sym-chro-nism; 2 a'sym-chro-nism. n. Want of coincidence in time. -a'sym-chro-nous, a.

A'syn'-cri-tus, 1 a'syn'-cri-tus; 2 a'syn'-cri-tus. n. *Bib. Rom.* xvi, 14.

a'syn'-de-ton, 1 a'syn'-de-ton; 2 a'syn'-de-ton. n. 1. *Gram.* Absence of connection or coherence of parts.

In all continuous writing the connexion of sentences is the rule, the absence of connexion (*asyndeton*) the exception. There are two kinds of *asyndeton*, -the grammatical and the rhetorical. WINTER *Gram. N. T. Greek* tr. by Moulton, § 60. fr. & c. 1877.

2. *Rhet.* Absence of connectives; a figure securing energy by omitting connectives, as in *veni, vidi, vici*; contrasted with *polysyndeton*. [*L.*, < *Gr. asyndeton*, neut. of *asyndetos*, unconnected. < *a-* priv. + *syn*, together, + *deō*, bind.] -as'yn-de-tic, a. Of or pertaining to *asyndeton*; apert; without cross-references; said of a library catalog. -as'yn-de-tic-cal-ly, adv.

as'yn-er'gi-a, 1 as'yn-er'gi-a; 2 as'yn-er'gi-a. n. *Pathol.* Defective central coordination of the muscles. [*Gr.* < *a-* priv. + *synergia*, synergy.] as'yn-er'gy, n.

as'yn-ne'si-a, 1 as'yn-ne'si-a; 2 as'yn-ne'si-a. n. *Pathol.* Great mental dullness; stupidity. [*Gr. asynestis*, < *a-* priv. + *syn*, together, + *nestis*, put.]

as'yn-ga'mi-a, 1 as'yn-ga'mi-a; 2 as'yn-ga'mi-a. n. *Bot.* The maturity of anthers and stigmas in a flower at different times; opposed to *syngamy* or *synthesis*. [*Gr.* < *a-* priv. + *syngamo*, marriage.] -as'yn-ga'my, n. -as'yn-ga'mi'ic, a.

As'yn-jia, 1 as'yn-jia; 2 as'yn-jia. n. [*Jur.*] 1. *Jur.* 2. *Jur.* pl. *Norse Myth.* A goddess; feminine of *As*. As'yn-jet, n.

as'yn-tac'tic, 1 as'yn-tac'tic; 2 as'yn-tac'tic. a. Lacking syntactic construction; irregular; ungrammatical.

a-sys-to-le, 1 a-sys-to-le; 2 a-sys-to-le. n. *Pathol.* A condition in heart-disease in which the contraction is insufficient to free the ventricles of blood. [*L.*, < *not*, + *stole*.] -as'ys-to-lysm, n. -as'ys-to-lyc, a.

a-syz'y-get'ic, 1 a-syz'y-get'ic; 2 a-syz'y-get'ic. a. Without syzygy or conjunction.

at, 1 at; 2 at. prep. [*At* primarily denotes simple occupancy of a point in space; whence arise numerous allied and figurative meanings, as of time, direction, etc., by which the word portakes of the meaning of numerous other prepositions and prepositional phrases.]

6. Of relations in general: in; engaged in; occupied with; connected with; dependent on; in a state or condition of; as, at school; at prayer; at war; at bay; at one's mercy; at liberty; they soon saw what he was at. These are suggestions to a mind at ease. ANNAN *Colorado* act i, ec. 1.

7. [*Colloq.*, So. U. S.] Of purpose, relation, occupation, or the like; used simply as an intensive; as, where have you been at? where does he live at? 8. With, by, or beside (a person). [*ME.* at, < *AS.* at (= *Goth.* at, to, to.)

Syn: about, because of, by, during, from, in, near, on, on occasion of, to, toward, with, within. As regards place, it is not used with names of countries; we say in England, in France, etc.; with names of cities and towns the use of at or in depends not chiefly upon the size of the place, but upon the point of view: when we think merely of the local or geographical point, we use at; when we think of inclusive space, we employ in; as, we arrived at Liverpool: there are few rich men in this village.

-at that [*Colloq.*] is addition; as well, an intensive use; as, only a penny - and a had one at that. -to be at it, to be actively employed.

 Lowell *Anti-Opius* st. 3.  
 II. f. 1. To make an expiation or propitiation, as for sin or a sinner; make amends, reparation, or satisfaction, as for an offense or wrong; serve as a set-off, as for an error or defect.  
 Thy purpose bath *atoned* for thy hasty rashness.  
 Scott *Irancheob* ch. 34, p. 287. [v. & c.]  
 'Twas but in giving that thou couldst atone  
 For too much wealth amid their poverty.  
 GEORGE ELIOT *Legend of Jubel* st. 36.

2. To be at one; agree.  
 At one, for 'reconciled,' is as old as Robert Mannyng: 'make an onement with God,' set at onement,' are expressions of the sixteenth century; and I am not aware that atonement and atone are of an earlier date. Further, atonement seems to have preceded atone. The latter nowhere occurs in the Bible.  
 F. HALL *Faith Philosophy* p. 5. [s. 1872.]

*a-tone', n.* Reconciliation; expiation; reparation.  
*a-tone'ment, 1 a-ton'ment or -ment; 2 a-ton'ment, n.* 1. The act of atoning, or its results. 2. That which atones; any satisfaction, amends, reparation, or expiation made for wrong or injury; something suffered, done, or given by way of propitiation or equivalent.  
 The least atonement I can make. Is to become no longer free.  
 Byron *Lines to a Young Lady* st. 7.  
 When a man has been guilty of any vice or folly, I think the best atonement he can make for it, is to warn others not to fall into the like.  
 Addison *Spectator* Mar. 9, 1710.  
 3. *Theol.* (1) The expiation of sin and the propitiation of God by the incarnation, life, sufferings, and death of Christ; the obedience and death of Christ in behalf of sinners as the ground of redemption; in the narrow sense, the sacrificial work of Christ for sinners. In the theology of many, including nearly all Universalists and Unitarians, atonement signifies the act of bringing men to God, in contradistinction to the idea of reconciling an offended God to men.  
 Redemption implies the complete deliverance from the penalty power, and all the consequences, of sin, as *atonement* is used in the sense of the sacrificial work, whereby the redemption from the condemning power of the law was insured.  
 H. B. SWIN *Christian Theology* p. 437. [a. s. 1884.]  
 (2) The work of Christ in the reconciliation of God and man, considered as mediatorial rather than sacrificial, or as an uplifting moral power or influence upon the minds of men.  
 Th' answer, but dreamed of before, to creation's enigma,—  
 Atonement! LONGELLOW *Children of the Lord's Supper* st. 6.  
 The theories by which theologians attempt to explain the facts of the atonement are mainly three: (1) the *Atonement* or sacrificial, that the atonement consists fundamentally in Christ's sacrifice for man's sins; (2) the *remedial*, that God, through the incarnation, entered into humanity so as to eliminate sin by the ethical process of Christ's life and death, and make the human race at one with himself; (3) the *Socinian* or moral influence, that Christ's work consists in influencing men to lead better lives. The sacrificial theory takes two general forms: (a) the *governmental*, that Christ's work was intended to meet the demands of the law of God and make such a moral impression upon men in favor of the divine government as to render the forgiveness of man safe; (b) the *satisfaction*, that it was intended to satisfy divine justice and make the forgiveness of man possible and right. manifold shades of opinion are embraced under these various theories.  
 4. *Christian Science.* See the quotation:  
 Atonement is the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love.

**au-thor**, 1 *a*-thor; 2 *a*-thor. *n.* 1. One who begins, forms, or originates; creator; prime mover; first cause; as, God is the *author* of all finite being.

The other example is that which is called *Verner's Law*, after the name of its author, Karl Verner of Copenhagen.

*EARLY English Prose p. 120, l. p. 3. 1891.*

2. The original writer or composer of a book, treatise, or document, as distinguished from an editor, compiler, or translator; specif., one who makes original composition, especially of books or permanent literature, a profession or specialty; as, who is the *author* of the book?

None but an author knows an author's cares.

*COWPER Progress of Error 1. 518.*

The author who speaks about his own books is almost as bad as a mother who talks about her own children.

*BENJ. DISRAELI Speech delivered Nov. 19, 1870.*

3. An author's writings collectively.

It often happens that such stories are found in the Greek and Roman authors. *BUTRICKS Age of Fable p. 2, (s. w. r.)*

4. *pl.* A game played by two to twelve persons, with a pack of 72 specially prepared cards divided into hooks, each hook devoted to a different author. 5. *Scots Law*. One from whom title to property is derived otherwise than by inheritance: the opposite of *ancestor*. 6. [*Archaic*]. An informant; one responsible for a statement.

7. An editor. [*OF. autor*, < *L. auctor*, < *augere*, increase]. *au-tour*.

*SYN.* composer, writer, inventor. See *CAUSE*.

**-au-thor-ta-ble**, *n.* In library-cataloging, a scheme giving to each work its own exclusive book-number, so contrived that the books stand on the shelves alphabetized by authors under each subject. voucher for what he *arouses*; he *arouses* openly a helief or intention that he *arouses* held, yet there is always the suggestion that some will be ready to challenge or censure what one *arouses*; as, the clergyman *aroused* his dissent from the doctrine of his church. *Arouse* and *arouse* take a direct object; *arer* is followed by a conjunction: a man *arouses* his faith, *arouses* a deed, *arouses* that he was present. *Arouse* has usually a good sense; what a person *arouses* he at least does not treat as blameworthy, criminal, or shameful; if he did, he would be said to *confess*. *Ours* applies to all things, good or bad, great or small, which one takes as his own. **bap'tism**, 1 bap'tizm; 2 bāp'tizm, n. 1. The act of baptizing; a sacrament, ordinance, or rite commanded by Christ (*Matt.* xxviii, 19), in which water is made use of, to initiate the recipient into the Christian Church, or to symbolize purification or spiritual burial and resurrection with Christ, or to signify or seal union with Christ as Savior and Lord, or to acknowledge consecration to Christ. Different views are held regarding (1) the proper subjects of baptism — whether believers only, or believers and their children, or others besides these; (2) the ritual act — whether by immersion, affusion (pouring), or sprinkling; (3) its efficacy — whether a mere rite or symbol, an ordinance indicating and sealing spiritual grace and regeneration already possessed, or a sacrament conferring these.

Melanchthon's doctrine is identical with Luther's. He says that God inscribes 'by means of the water his promise' in a certain sense 'upon our bodies.' The Reformers were convinced that children must be baptized in order to be saved; for on account of original sin they also need pardoning and renovating grace. . . . It is evident that Calvin counts baptism only among the normal means which bind the elect to the Church.

*New Schaff-Herzog Encyc.* vol. i, p. 439.  
The principal effects of baptism are: (1) The remission of all sin, original and actual. . . . (2) But baptism not only washes away sin, it also remits the punishment of sin. . . . (3) Another effect of baptism is the infusion of sanctifying grace. . . . (4) Theologians likewise teach that baptism gives man the right to those special graces for which the sacrament was instituted. . . . (5) Finally, baptism, once validly conferred, can never be repeated. . . . baptism is said to impress an ineffaceable character on the soul. *Catholic Encyc.* vol. ii, p. 203.

2. A religious ablution signifying purification or consecration, as that by which proselytes were Judaized, or the Roman Catholic christening of bells.

The Fathers themselves were the first to recognize that 'the devil too, had his sacraments,' and that the Eucharist, Isaac, Mithrae and other mystic initiations were baptism in disguise. *Encyc. Brit.* 11<sup>th</sup> ed. vol. iii, p. 309.

3. *Chr. Sci.* Immersion in and cleansing by the Divine Spirit. — **bap'ti-za'tion**.

**Bap'tist**, 1 bap'tist; 2 bāp'tist, n. *Ch. Hist.* 1. One of a Christian denomination basing its polity on the New Testament only, and holding that the only valid Christian baptism is the immersion of a convert upon his credible profession of faith in Christ, and also that the visible Church is properly constituted only of those who have been regenerated and baptized.

The Baptists as a distinct denomination date from the time of the Reformation. They were at one time oppressively termed *Anabaptists*. In 1611, owing to persecution, many Baptists fled to America, the first organized Baptist church being founded by Roger Williams at Providence, R. I., in 1639. Meanwhile the English Baptists in 1611, 1644, and 1646 published their *Confessions of Faith*; in 1689 a General Assembly in London issued a Confession in 32 articles together with a Catechism. The English Baptists were divided into two sections, the *General* or *Arminian* (1609) and the *Particular* or *Calvinistic* (1633), but these were finally united in 1802. The first Baptist church in Scotland was established in Calnethness in 1750. The Baptists are trinitarians, and their churches are congregational in government. Those who maintain that total immersion is necessary for communion are called *close communionists*, as opposed to the *open communionists*. The total number of Baptists in the United States is estimated at about 6,000,000; and in the United Kingdom 1,500,000, while the total number of English-speaking Baptists is estimated at 9,230,000.

2. designation of various bodies of Christians, differing in some of their doctrines, but holding the immersion of the believer to be the only Christian baptism. 3. One of many non-Christian Denominations employing a mode of baptism, as the Mandaeans. 4. [Archaic.] One who administers baptism; as, John the Baptist (*Matt.* xiv, 2).

— **Baptist Church** of Christ, an organization founded in Tennessee about 1808, holding to general atonement and practising foot-washing as a religious ordinance. — **Calvinistic Baptists**, that part of the Baptist denomination which adheres to the doctrines of Calvin as distinguished from those of Arminius. Compare *REGULAR BAPTISTS*.

— **Free or Free-Will B.** One of a body of Baptists that originated in New Hampshire in 1780, rejecting the Calvinistic doctrine of predestination and practising open communion. — **General Baptists**, a body of Baptists formed from the older English type in Kentucky in 1824 who agree in doctrine more closely with the Regular Baptists than do the Free Baptists. They adopted open communion in 1830. — **German B.**, see *DUNKERS*. — **Landmark B.**, one of a body of Baptists found principally in the southwestern United States who deny fellowship with the Pedobaptists and the validity of their baptism. — **Old-Two-Seed** in the Spirit Predestinarian B., a follower of a strongly Calvinistic sect formed in Tennessee in 1806, whose doctrine maintained a belief in a dualistic origin of good and evil, and opposed "modern institutions" and a paid ministry.

— **Original Free-Will B.**, one of a small body of Baptists arising in North Carolina in 1729, who adopted their name to distinguish themselves from the larger body in New Hampshire, from whom they differ in the practise of foot-washing and anointing the sick with oil. — **Primitive or Old School B.**, one of an extremely Calvinistic body, popularly called Anti-Mission and "Hardshell" Baptists, originating in New York and Pennsylvania about 1835 in opposition to missionary, Bible, tract, and temperance societies, Sunday-schools, theological seminaries and colleges, etc. — **Regular Baptists**, a Calvinistic body of Baptists originating in Rhode Island in 1639 and forming the bulk of this denomination. In 1845 differences arose concerning the slavery question which divided the church into two sections, the North and the South. — **Separate B.**, one of a body of Baptists in Indiana who owe their origin to their dissent from the Whitefield revival, agreeing in doctrine generally with the Free Baptists. — **Seventh-Day B.**, one of a body of Baptists, arising in England in the 16th century and organized in Rhode Island in 1671, who observe the seventh day, of the week, or Saturday, as the Sabbath. — **Six-Principle B.**, one of a body of Baptists organized in 1690 on the basis of the six principles—repentance, faith, baptism, laying on of hands, resurrection of the dead, and eternal life. The Six Principles are a survival of the General Baptists who flourished in Rhode Island and Connecticut in 1639, and their churches are gradually becoming extinct. — **United Baptists**, a body of Baptists, of modified Calvinistic doctrine, formed by the union of Regular and Separatist Baptists in Kentucky in 1801. They practise close communion and insist upon foot-washing as an essential ordinance.

**base-ball'**, *n.* A game played with bat and ball, named after the four bases or bounds which mark the course each runner must take; also, the ball used in the game: called the "national game of the United States."  
The players are divided into two sides, generally of nine each, one being at the bat and the other in the field, alternately. Each player of the former, in his turn, tries to hit the ball (thrown by one of the opposing side, the pitcher) in such a manner that the batsman can reach one of the bases before the ball can be thrown there, or before he can be touched with it. In all cases the catcher must make irregular runs. He then tries in like manner, while succeeding plays are going on, to catch the bat, to which base-runner must confine himself; reach the next base, nad eo to mnke the Q, Q, H is out if the hsl, when he strikes it, is caught by no opponent before it rounds, or if he misses the ball thrice and it is then caught by the player behind him (the catcher), and also in certain other contingencies. When three players on a side are out the sides change places, and when each side has had its turn of the hot an inning is concluded. Nine innings usually constitute a game. The side that has scored the greater number of runs wins the game.

charge or current. (2) A single voltaic cell or couple: a misnomer.

The principal types of electric battery in practical use are (1) the chemical, galvanic, or voltaic, in which the energy of the current is transformed chemical energy; (2) the thermoelectric or pyroelectric, in which heat-energy is converted into that of electricity; and (3) the secondary or storage, serving merely to store energy from an outside source. Each cell of the voltaic battery consists in general of two different metals, immersed in a fluid or fluids that act chemically on one of them, as zinc and copper in solutions of zinc sulfate and copper sulfate respectively in the Daniell type, zinc and platinum in dilute sulfuric and strong nitric acids, respectively, in the Grove, or zinc and carbon in ammonium chloride in the Leclanché. The thermoelectric battery consists in general of strips of two metals, as bismuth and antimony, so arranged that alternate junctions can be heated while the others are kept cool. Storage batteries consist usually of lead plates immersed in an electrolyte. A current, as from a dynamo, causes the positive and negative plates to be affected differently, and hence, when it ceases and the proper connections are made, they act like different metals, and send out a reverse current, or one in the principle of the ordinary voltaic cell. While the energy "stored" in the battery is thus chemical, it can be obtained at will in the electrical form. Edison's storage battery, a voltaic combination in an alkaline electrolyte. The active materials are oxide of nickel and of iron, the positive plate consisting of a grid of nickel-plated steel, holding 30 tubes filled with an oxide of nickel interspersed with nickel-flake; and the negative plate consisting of a similar grid, containing 24 flat rectangular pockets filled with an oxide of iron mixed with a small proportion of mercury. The plates are placed alternately and when assembled with proper insulating pieces are put into a nickel-plated can or container, whose cover is welded on by an autogenous process. The electrolyte is a solution of caustic potash in water. The battery weighs only about one-half as much as a lead battery for the same output.

Edison Storage Battery.

Many electric batteries derive their names (1) from substances used in the cells; as, *alnm-battery*, *carbon-b.*, *chlorid of lime*, *silver*, or *tin b.*, *coke-b.*, *gas-b.*, *nickel-b.*, *perchlorid of iron b.*, *peroxid of lead* or *manganese b.*, *selalum-b.*, *water-b.*, etc.; (2) from their inventor; as, *Bunsen b.*, *Byrne b.*, *Callan b.*, *Camacho b.*, *Carré b.*, *Clamond b.*, *Gaiffe b.*, *Latimer-Clark b.*, *Menot b.*, *Muirhead b.*, *Münch b.*, *Nobilis b.*, *Planté b.*, *Ponce b.*, *Pulvermacher b.*, etc.; (3) from the nature of the sources of electricity combined; as, *dynamo b.*, *galvanic b.*, *Leyden-jar b.*, *thermoelectric b.*, etc. Other varieties are: *aerated battery*, a battery in which polarization of the negative element is prevented by agitating the exciting fluid by a current of air (see *POLARIZATION*); *agglomerated b.*, in which the salt for preventing polarization is compressed into a cylinder around the negative element, thus replacing the porous cup; *bank-b.*, one from which separate circuits are supplied with current, also one connected in multiple arc; *cautery-b.*, with high electromotive force and low internal resistance, for heating a cautery-wire; *closed* or *open-circuit b.*, see *CIRCUIT*; *column b.*, a voltaic pile; *double-fluid b.*, having two exciting fluids; *dry b.*, a battery composed of cells whose contents are solid or nearly so; a *dry pile*; *floating b.*, a storage-battery connected between live wires or feeders in such a way that it charges at light load and discharges at heavy load; *gravity-b.*, a two-fluid battery in which there is no porous cup and in which the fluids are separated by the different specific gravities; *independent b.*, a single-fluid battery; *magazine b.*, in which the strength of the excitant solution is kept up by a supply of the crystals or other substance immersed therein; *marine b.*, one excited by the water of the ocean; *mechanical b.*, in which polarization is prevented and the action increased by agitation of the plates; *perforated b.*, in which the flow of the exciting liquid through it keeps it constant; *plunge-b.*, *plunging-b.*, in which one or both elements may be withdrawn from the exciting fluid, to render it inoperative, when desired; *pneumatic b.*, an aerated battery; *split b.*, a voltaic battery connected in series (see *SERIES*), and having one of its middle plates connected with the ground so as to maintain its poles at potentials differing in opposite directions from those of the earth; *standard b.*, a battery having constant electromotive force. 3. *Hat-making*. A large open hoiling-vat having a conical plank bottom, and containing diluted sulfuric acid: used in felting. 4. *Lava*. Any unlawful heating or use of force by one person upon another committed wilfully or from want of sufficient care: usually in the phrase *o-sault and battery*. Compare *ASSAULT*.

The least touching of another's person wilfully, or in anger, is a battery. BLACKSTONE Commentaries bk. iii, ch. 8, p. 120.

5. *Mining*. (1) A structure of timber to keep coal in place. (2) An embankment or platform from which miners work. 6. Any apparatus in which similar parts are assembled to serve a common end; as, a *battery* of evaporating-pans; a *battery* of prisms in a spectroscope; *n battery* of boilers, magnets, or reducing-stamps; a *battery* of hatching-jars in pisciculture; a *battery* of Roman candles. 7. *Baseball*. The pitcher and the catcher together. 8. A number of pieces of metal, or an assemblage of metal articles; especially, metal utensils used in serving meals. 9. A box or boat submerged to the rim, used in shooting wild fowl; a *sink-boat*: prohibited by law in many localities. 10. [Slang. W. U. S.] A revolver.

A man would pull out his battery  
For anything—may be the price of whisky.  
BART HAMPTON Babes in the Wood st. 1.

11. *Courtenis*. That part of the wall of the court which is bounded at the top by the penthouse roof or the bottom of the galleries. 12. The act of hatching; attack with or as with a hatching-ram. [*F. batterie*, *< batterie*; see *BATTER*, v.]—*battery* amalgamation (*Metall.*), amalgamation by means of mercury placed in the mortar. *b. d'enfilade*, a battery enfilading a fortification or body of troops. *b. en écharpe* [*F.*], an oblique-firing battery—*fixed b.* 1. A battery of guns or mortars fixed in place in a permanent fortification. 2. A heavy siege-gun battery more or less fixed in position. 3. A field-fortification more or less permanent for field- or siege-guns. *In b.*, in position for firing, as a gun in a battery: opposed to *out of* or *from battery* (withdrawn for loading).—*Intermediate b.* (*Navy*), a battery, as on certain war-ships, consisting of

guns having a caliber of from 4 to 7 inches: not included on modern battle-ships.—The *Battery*, a public park at the southern point of Manhattan island, New York city; the site of fortifications once erected by the Dutch and containing the Barge Office and Castle Garden, now the New York Aquarium.

*bat'teuse*, 1 *bat'tuz*; 2 *bat'tus*, *n.* [*F.*] In silk-manufacture, the person who brushes and cleans cocoons in readiness for throwing.

*Battb-yán-yí*, 1 *bat-yán-yí*; 2 *bat-yán-yí*, *Connt*, Louis (4/1809-10/1849). A Hungarian patriot; prime minister, 1848; court-martialed and shot.

*Bat'ti-ca-lo'a*, 1 *bat'ti-kn-ló'o*; 2 *bat'ti-cá-ló'ñ*, *n.* A city on the E. coast of Ceylon.

*bat'tick*, 1 *bat'tik*; 2 *bat'tik*, *n.* A small tick-like nycteribid dipterous insect parasitic on bats.

*bat'ting*, 1 *bat'ting*; 2 *bat'ting*, *n.* 1. Cotton or wool prepared in sheets for use in making quilts or the like. 2. The act of treating raw cotton in a *batting-machine*. 3. The act or manner of using a bat. *bats*; *bat'ti*—*bat'ting-block*, *n.* *Ceram.* A plaster slab on which plastic clay is beaten before going to the *whirling-table*. *b. board*, *n.* *Waring*. A device in a Jacquard loom to thrust forward the needles.—*b. hammer*, *n.* A deeply grooved wooden mallet, with a long curved handle, for *batting* flax, cotton, etc.—*b. machine*, *n.* A machine for *batting*, blowing, and lapping partially loosened and cleaned cotton, and delivering it in a bat.—*b. staff*, *n.* A beater used by laundresses in washing linen.

*bat'tish*, 1 *bat'tish*; 2 *bat'tish*, *a.* Of, pertaining to, or like a bat.

*Bat'tis-ta*, 1 *bat'tis-ta*; 2 *bat'tis-ta*, *n.* [*It.*] Baptist.

*bat'tle*, 1 *bat'tle*; 2 *bat'tle*, *v.* [*BAT'TLED*, *BAT'TLING*; *BAT'TLE*, *BAT'TLING*.] *l.* To contend in battle or as in battle; fight; struggle; strive.

Webster wrote his education by battles against difficulties. E. P. WATKINS *Essays and Reviews* vol. i, p. 78, in. M. & Co. 1882.

*IL l.* 1. [*Rare*.] To assail with arms; fight; as, to *bat'tle* one another. 2. To put in battle array. 3. To fight for. [*OF. batailler*, *< bataille*; see *BATTLE*, *n.*]

*bat'tle*, *vt.* [*BAT'TLED*; *BAT'TLING*.] [*Archae.*] To beat (a fabric) with a beetle during washing or while drying.

*bat'tling-stick*, *n.* A *batting-staff*.

*bat'tle*, *vt.* To fortify with battlements.

*bat'tle*, *n.* [*North. Eng. & Scot.*] 1. Nourishing or fattening for cattle or sheep; sale of pasturage. 2. Fertile; productive; said of land. *bat'tle*; *bat'tel*.

*bat'tle*, *n.* 1. The act of fighting; an engagement, combat, or conflict between hostile forces on sea or land; warfare; hence, any struggle or contest; as, the *battle* of life. *Battle* is now more properly used of a contest between large numbers with fierce and prolonged fighting. It is an element of some self-explaining names of things used in, during, or for battle; as, *bat'tle-ax*, *b. brand* (a sword), *b. club*, *b. cry*, *b. field*, *b. flag*, *b. ground*, *b. mace*. Great battles are really won before they are fought. J. LUBBOCK *Pleasures of Life* p. 26. [*n. a.* 1887.]

2. A fight between two persons, especially a trial by combat. 3. [*Archae.*] Instruments of war; arms; used collectively. *Ps. lxxvi, 4; Hos. ii, 20. A. Bowling*. A game resembling tennis, but differing from it in that no more than six innings are played except in case of a tie, in that knocking down all pins but the king-pin counts twelve, and in several other details. 5. A division of an army, or its main body. 6. A war. [*OF. bataille*, *< LL. battalia*, *< batto*; see *BATTEN*, *v.*] *bat'tel*; *bat'taler*; *bat'tel*.

*Syn.* action, affair, bout, combat, conflict, contest, encounter, engagement, fight, skirmish. *Conflict* is a general word which describes opponents, whether individuals or hosts, as dashed together. One continuous conflict between entire armies is a *battle*. Another *battle* may be fought upon the same field after a considerable interval; or a new *battle* may follow immediately, the armies meeting upon a new field. An action is brief and passing; a *battle* may last for days. *Engagement* is a somewhat formal expression for *battle*; as, it was the commander's purpose to avoid a general engagement. A protracted war, including many battles, may be a *suborn contest*. *Combat*, originally a hostile encounter between individuals, is now used also for extensive engagements. A *skirmish* is between small detachments or scattered troops. An encounter may be either purposed or accidental, between individuals or armed forces. *Fight* is a word of less dignity than *battle*; we should not ordinarily speak of Waterloo as a *fight*, unless where the word is used in the sense of fighting; as, I was in the thick of the *fight*.—*Ant.* armistice, concord, peace, suspension of hostilities, truce.—*Prop.* a battle of giants; battle between armies; a battle for life, against invaders; a battle to the death; the battle of (more rarely *at*) Marathon.

*Battle*. Above the clouds, the contest above the clouds, forming part of the battle of Chattanooga, Nov. 24, 1863, and resulting in the capture of Lookout Mountain by the Federal troops under General Hooker.—*bat'tle-lan-tern*, *n.* *Nat.* A lantern or movable electric light, hung between decks and near the guns during a night engagement.—*B. of the Books*, a satire by Dean Swift relating to a current discussion as to merits of ancient and of modern works.—*B. of the Frogs*, and *Mice*, same as *BAT-BACHOMTOMACHY*.—*B. of the Gladiators*, the battle of Marston, 1213.—*B. of the Kegs*, a satirical romance, by Francis Hopkinson, ridiculing the British troops for making some kegs in the Delaware river for torpedoes and firing on them.—*B. of the Kings*, the battle of four kings against five described in Gen. xiv.—*B. of the Nations*, the battle of Lepzig. See list.—*B. of the Spurs*. 1. Defeat of French nobles by burghers at Courtrai, France, July 11, 1302; 4,000 gold spurs captured. 2. Defeat of French by English at Guinegate, near Calais, France, Aug. 16, 1513; so called from the impetuous flight of the French troops.—*B. of the Standard*, English victory over the Scots at Northallerton, Yorkshire, England, Aug. 22, 1138, when the banners of St. Peter of York and St. John of Beverley, St. Wilfrid of Ripon, and St. Guthbert of Durham were flown.—*B. of the Thirty*, a combat between thirty English and thirty French knights which took place in 1351 between the castles of Ploermel and Josselin in France and resulted in the defeat of the English.—*B. of the Three Emperors*, the battle of Austerlitz. See list.—*b. piece*, *n.* A painting or piece of music representing a battle.—*b. plane*, *n.* An aeroplane built to carry rapid-fire guns and machine-guns; used in aerial warfare.—*b. range*, *n.* Same as *CRATER*. 2.—*b. range*, *n.* *Phil.* The distance which gives the greatest danger zone for the trajectory of any firearm.—*b. royal*, a general fight, or a fight of several game-cocks until one falls.—*b. scarred*, *a.* Having scars of wounds received in battle.—*b. ship*, *n.* A ship designed to fight in line of battle; heavily armored and carrying usually a main battery of from four to ten 12- to 13.5-inch guns or guns of heavier caliber and a proportionate number of

rapid-firing guns of from 5-inch to 8-inch caliber. *Line-of-battleship*. In modern usage distinguished from a *cruiser* by its heavy armor-plating and slower speed, and from a *gunboat* by its greater size and heavier armament.—*bat'tle-stand*, *n.* [*Archae.*] A battle-field.—*b. written*, *a.* Distorted, twisted, or torn in or as in a fight; as, *bat'tle-written* trees.—*drawn b.*, a battle in which neither party wins a victory.—*pitched b.*, a regularly planned and deliberately executed battle.—to give *b.*, to open or provoke battle; attack.—to join *b.*, to meet or engage in battle.

The **[Baumé] hydrometer** . . . consists of a common hydrometer graduated in the following manner. Certain fixed points were first determined upon the stem of the instrument. The first of these was found by immersing the hydrometer in pure water at the room temperature, and the zero level of the surface. This formed the zero of the scale. Fifteen standard solutions of pure common salt in water were then prepared, containing respectively 1, 2, 3, . . . 15% (by weight) of dry salt. The hydrometer was plunged in these solutions in order, and the stem having been marked at the surface of the liquid, the degrees so obtained were numbered 1, 2, 3, . . . 15. . . . The instrument thus adapted to the determination of densities exceeding that of water was called the **hydrometer for salts**.

The hydrometer intended for densities less than that of water, or the **hydrometer for liquids**, is constructed on a similar principle. . . . A solution containing 10% of pure salt is used to indicate the zero of the scale, and the point at which the instrument floats when immersed in distilled water at 10° R. (54°4 F.) is numbered 10. Equal divisions are then marked off upward along the stem as far as the 50° R. point.

*Encyc. Brit.* 11th ed. vol. xiv, p. 163.

—**Baumé's scale (Physics)**, either of the hydrometric scales designed by Antoine Baumé for determining the specific gravity of (1) acids; (2) spirits. See **BAUMÉ HYDROMETER; HYDROMETER, n.** Readings on Baumé's scale may be approximately converted into specific gravities by the following formulas: (1) for liquids of greater specific gravity than water,  $\text{sp. gr.} = 144 + (144 - \text{Baumé reading})$ ; (2) for liquids of less specific gravity than water,  $\text{sp. gr.} = 144 + (134 + \text{Baumé reading})$ .

**Baumé's des Dames, 1 bōm'le-dām; 2 b'ām'le-dām, n.** A town in Doubs department, France.

static or water bed, straw bed; (2) from their construction; as, brass bed, folding bed, iron bed, woven-wire bed; (3) from their use; as, field-bed (army), hospital-bed, etc.

Bed is the first element in many compounds, mostly self-explaining, naming things used for, in, or about n bed; as, bed-chair (combined chair and bed), bedelthies (coverings for a bed), bedcover (coverlet), bed-frame, bed-lounge (combined lounge and bed), bedpost (corner post of a bed), bedquilt, bed-sacking, bed-spring, bed-steps (for a high bed), bedtick (see tick), bedtickling.

2. Hence, any place or thing used for a couch or for sleeping in or on; as, a bed of hay, straw, or bemoor boughs; a rocky bed. 3. A heavy horizontal mass of matter, or a collection of closely massed objects, especially used or considered as a foundation or support. 4. The ground at the bottom of a body of water; as, a river-bed; the bed of the ocean. 5. In technical use, one of a large number of things resembling, likened to, or used for a bed. Some of them are: (1) *Arch.* Some part or surface which serves as a foundation, as the part of a printing-press which supports the form, or a part from which work is fed to a machine. (2) *Masonry.* (a) A layer of mortar in which stones or bricks are to be laid. (b) A horizontal course of a stone wall. (c) The lower side of a slate, tile, or brick. (3) *Naut.* The cradle of a vessel on the stocks. (4) *Hort.* A plot of ground prepared for planting some particular thing, or the plants, etc., growing in such a plot; as, a radish-bed. (5) *Bookbinding.* Dissolved gum tragacanth prepared for marking book-edges. (6) *Billiards & Pool.* That part of the table bounded by the cushions. (7) *Railroad.* A road-bed. (8) *Ordnance.* The support of the old-fashioned smoothbore mortar.

6. One of the divisions marked out in the game of hopscotch. 7. *Geol.* (1) Any layer in a mass of stratified rock, often distinguished by some special characters from contiguous layers.

There is a tendency in use the term *bed* or *beds* more particularly in connection with the softer and less consolidated rocks of the Cretaceous, Tertiary, and Quaternary systems. Beds are named from the place of their occurrence, from the time of their formation, from their manner of deposition, from their lithologic character, or from their characteristic fossil or mineral contents; as, the *Aftonian beds* (Pleistocene of Illinois); *Ceratops b.* (Cretaceous of Wyoming); *Glauconitic b.* (Cretaceous of Texas); *Grand Gulf b.* (Tertiary of Louisiana). See *Geology*.

(2) A deposit, as of ore, parallel to the stratification, later in origin than the rock below, and older than the rock above, thus constituting a regular member of the series of formations, and not an intrusion. 8. A collection of wild fowl massed together, as ducks. 9. The marriage-bed; hence conjugal cohabitation, or the right to it. [AS.]

*Syn.* berth, bunk, cot, couch, pillow, rest, resting-place. See *NOTES*.—apple-bed, a bed having a sheet doubled upward from the middle to prevent the occupant's lying at full length, thus resembling a turnover pie; a trick bed. *bed'ale*, n. Syn.: ask, beseech, crave, entreat, implore, petition, pray, request, solicit, supplicate. One asks what he feels that he may fairly claim and reasonably expect; "If n son shall ask bread of any of you that is a father," Luke xi, 11; he begs for that to which he advances no claim but pity. Entreat implies a special earnestness of asking, and beseech, a still added and more humble intensity. To implore is to ask with weeping and lamentation; to supplicate is to ask, as it were, on headed knees. Crave and request are somewhat formal terms; crave has almost disappeared from conversation; request would seem distant between parent and child. Pray is now used chiefly of address to the Supreme Being; petition is used of written request to persons in authority; as, to petition the legislature to pass an act, or the governor to pardon an offender.—Ant.: claim, command, demand, enforce, exact, extort, insist, require.—Prep.: to beg for bread; to beg of a person.  
—to beg the question, to take for granted the matter in dispute; assume without warrant something that involves the point under discussion.—to go a-begging, to be without market value; seek in vain for a purchaser or receiver.—beg-ga-ble' (e), a. That may be begged.

be-gin'ning, 1 bi-gin'ing; 2 be-gin'ing, n. 1. The starting-point in space, time, action, or being; commencement. Specifically, the epoch at which the universe came into existence.

In the beginning God created the heavens and the earth. Gen. i, 1.

2. The first stage of an action or epoch; the first part; as, he made a good beginning. 3. The source, origin, or first cause of anything; ns, "I am . . . the beginning," Rev. i, 8. 4. [B.] In mystical philosophy, the first person in the Trinity; so used by Dionysius. JOHN COLER Hierarchies of Dionysius p. 39. [1869.] be-gin'ing, be-gin'ne',

Syn.: commencement, foundation, inauguration, inception, initiation, opening, origin, outset, preface, prelude, rise, source, start, threshold. The Latin commencement is more formal than the Saxon beginning, as the verb commence is more formal than begin. Commencement is for the most part restricted to some form of action, while beginning has no restriction, but may be applied to action, state, material, extent, enumeration, or to whatever else may be conceived of as having a first part, point, degree, etc. The letter A is at the beginning (not the commencement) of the alphabet. If we were to speak of the commencement of the Pacific Railroad, we should be understood to refer to the enterprise and its initiatory act; if we were to refer to the roadway we should say "Here is the beginning of the Pacific Railroad." In the great majority of cases begin and beginning are preferable to commence and commencement.

An origin is the point from which something starts or sets out, often involving, and always suggesting causal connection, as the origin of evil; the origin of a nation, government, or family. A source is that which furnishes a first and continuous supply; ns, the source of a river; a source of knowledge; n source of inspiration; fertile land is a source (not an origin) of wealth. A rise is thought of as in an action; we say that a lake is the source of a certain river. Motley wrote of "The Rise of the Dutch Republic." Compare CAUSE.—Ant.: close, completion, conclusion, consummation, end, termination.

**be-lieff'**, 1 bi-lif'; 2 be-lif', n. 1. A conviction or assurance of the truth or actuality of anything on other grounds than clear perception or indisputable argument; acceptance as true by reason of sentiment or rational conviction rather than positive knowledge. *Belief* is, however, held by most psychologists to be an essential element, or aspect, of all knowledge. In Early English *belief* was the equivalent of what is now commonly called *faith*; but in Middle and Modern English it has been confined mainly to the purely intellectual process, excluding the moral element of trust and confidence embraced in *faith*. *Faith* in Christ is *belief* in Christ, combined with *trust* to Him. Compare **FAITH**.

*Belief*, in the generic sense now contemplated, includes every degree of conviction from the feeblest to the strongest.

E. J. HAMILTON *Human Mind* ch. 16, p. 101. [c. a. 1808.]

By rational *belief*, then, we mean the acceptance of any thing on grounds which while they render it probable, do not strictly compel its admission.

B. P. BOWNE *Studies in Theism* p. 61. [f. & n. 1879.]

bellet', [*< AS. bellan*; see BELLOW.]

bellet', n. To swell up like a bell or boll. [C.]

bell', n. 1. A hollow metallic instrument for giving forth a sound when struck by a clapper within, or by a separate hammer: used generally to give signals, but sometimes, in combination with others, to produce music.

Bells are (1) cup-shaped with flaring edges, as the church-bell, (2) saucer-shaped, as the gong-bell, or (3) spherical with a loose ball within, as the signal bell. Many bells are named (1) from their use; as, call-bell, fire-bell, fog-bell, night-bell; or (2) from the object with which they are connected; as, church-bell, cow-bell, door-bell, harness-bell, sheep-bell, shop-bell. "Czar Kolokol," the Great Bell of Moscow.

Bell is the first element in many compounds that are practically self-explaining; as, bell-buoy, bell-call, bell-chuck, bell-cord, bell-faced, bell-founder, bell-foundry, bell-horse, bell-mare, bell-metro-nome, bell-mouthed, bell-mosed, bell-pull, bell-ringer, bell-rope, bell-shaped, bell-tongued, bell-tower.

2. Anything in the shape of or suggesting a bell. (1) A bell-shaped flower or corolla. (2) The echinus or calyx of a Corinthian and similar capitals. (3) The expanded lower termination of any tubular musical instrument. (4) The stem of the hop; as, the hops are in bell. (5) (a) The diapason of the male moose. (b) The swimming-disk of a jellyfish. (6) *Arch.* (a) The socket or enlarged end of a water-pipe, which receives the small end of the next pipe in line. (b) The vibrating or sounding cylinder of a steam-whistle. (c) The movable cap at the top of a modern blast-furnace, which is lifted to put in the charge of ore, etc. (7) *Geol.* A mass of rock shaped like an inverted bell, embedded in certain strata; apparently a solid filling of a pot-hole, but perhaps due to other causes. In coal-measures, bells occur in the overlying shale, and may extend down into or through a coal-bed. (8) The body of a helmet. (9) In British India, a peg, formerly a bell-shaped structure, in which the guns and equipment of a native regiment are kept.

3. The ringing of a bell as a signal or summons to work, meals, etc., as in schools, hotels, and elsewhere.

4. On shipboard, a stroke on a bell to mark the time; with a numeral prefixed, the time thus marked.

The twelve hours of the day are divided into three watches, in each of which the half-hours are marked by strokes on a bell. Thus, beginning at midnight, one bell is half past twelve, and eight bells four o'clock; then, one bell is half past four, and eight bells eight o'clock. [*< AS. belle*, < *bellan*; see BELLOW.] —bell-and-shop'per, n. An apparatus for charging a blast-furnace. It is placed at the top of the furnace and consists of a hopper, the bottom of which is open and closed by a cone or bell-shaped part.

—bell-animalcule, n. A vorticellid infusorian having a more or less bell-shaped sessile bug or leathopper (*Boerhaavia tinianabulferum*).  
 —bell-and, n. The hedge-hawndew (*Convolvulus autumnalis*). —bell-and, n. A bird, formerly one of various birds having a bell-like note. (1) A South-American cotingid bird (genus *Chasmorhynchus*), as the arapunga (*Chasmorhynchus nictatus*), with an erectile horn-shaped crest. (2) A honey-sucker or melliphagid (*Manorhina melanophrys* of Australia or *Anthorhina melanura* of New Zealand). (3) A crow-shrike (genus *Strepera*). —b., book, and candle, attributions of the older offices of excommunication in the Roman Catholic Church, the office being read from a book, the bells rung, and the English bluebell (*Scilla nutans*). —b.-shot, n. Having bottoms that flare like the edges of a bell: said of trousers, especially such as are worn by sailors.

—b.-bottoms, n. pl.—b.-boy, n. A boy whose business it is to answer call-bells.

—b.-cage, n. A bellry. —b.-carriage, n. —b.-chamber, n. The open portion of a tower, where bells are hung and mounted.

—b.-chuck, n. A retired dormer, usually mounted by a spiral for hanging one or more bells. *bell'-cot*, n. A crane. —b.-crank, n. An L-shaped or triangular lever for changing direction of motion 90° more or less: used in bell-pulls or bell-wires. —b.-deck, n. The level of a tower in which a bell is hung: a bellry-tower.

—b.-faced, a. Having a convex surface, as a halberd-hammer. See FEEN.—b.-flowered, a. Having bell-shaped flowers.

—b.-gale, n. *Arch.* A gable or gable-shaped construction with an opening in which a bell is hung. —b.-gastrula, n. *Embryol.* An archigastrula. —b.-glass, 1. A glass vessel having the shape of a bell: used to cover articles which may be injured by dust or air-currents. 2. *Chem.* A bell jar. —b.-hanger, n. 1. One whose trade is hanging bells or repairing bell-wires. 2. A bracket or other device supporting a bell. —b.-sharp, n. A box-like stringed instrument, swung to and fro when played. —b.-heater, n. Same as HEATER-BELL. —b.-hop, n. [*Colloq.* U. S.] A bell-boy. —b.-horse, n. [*Eng.*] A workman who, for a consideration, exerts himself more than his fellows, to give grounds to the employer for the discharge of the one who does not work up to this level. —bell'house, n. 1. A bellry, especially when detached. 2. *Archol.* A

elochan or a round house used as for defense, such as are found on islands off the west of Scotland and in Ireland. —b. jar, a bell glass as used in chemistry and physics. —b. magnet, n. A horseshoe magnet having semi-annular poles together forming a split tube. 2. An electric bell: a misnomer. —b.-maggie, n. A crow-shrike (genus *Strepera*). —b.-mare, n. A mare that leads a herd of horses, as on a ranch, so called from the bell that she wears. —b.-metal, n. An alloy consisting essentially of copper and tin, usually in the proportion of four to one, but sometimes containing small quantities of zinc, lead, iron, silver, bismuth, and antimony: used for the manufacture of bells of all kinds. —b.-metal ore, stannite. —b.-moth, n. A tortricid or leaf-roller: so called from its outline when at rest. —b. of arms, same as BELL, 2 (9). —b.-pepper, n. A variety of red pepper (*Capiscum annuum*) with large pods; also, its pods. —b.-pipe, n. A pipe of considerable bore having a hub, bell, or socket at one end. —b.-poly, n. A bell-animalcule. —b.-pull, n. The handle of a bell-wire. —b.-punch, n. A ticket-punch having a signal-bell, used to record fares collected and serving as a check on the conductor. —b. roof, a roof whose vertical section presents the general outline of a bell. —b.-rose, n. [*Colloq.* *Eng.*] The daffodil. —b.-screw, n. An iron rod having at the lower end a bell-shaped cavity containing a thread by which to recover a well-boring tool when lost. —b.-sound, n. A peculiar resonance heard in auscultation. —b.-strap, n. A strap running lengthwise of a street-car to a signal-gong. —b.-telegraph, n. 1. A telegraph giving audible signals by two bells of different pitch. 2. An annunciator. —b.-top, n. *Naut.* The top of a quarter-gallery when the upper stool is hollowed away. [M.] —bell'top'per, n. [*Slang.*] A high silk hat. —b. trap, a stretch-trap consisting of an inverted bell with water-seal. —b.-tree, n. A device consisting of a number of small bells suspended on a staff: used in rendering some musical compositions requiring the jingling of bells, and also as a toy. —b.-turret, n. A small tower, supported by a larger building, to contain a bell or bells, and commonly surmounted by a spire or pointed cap. —b.-wether, n. The wether that leads a flock of sheep, known by wearing a bell on the neck. —b.-work, n. *Mining.* A method of working by bell-shaped underground excavations around a central shaft: used in flat ironstone beds and in salt-deposits. —bell'wort, n. 1. [*U. S.*] Any plant of the genus *Utricularia*, having terminal drooping flowers of a yellowish color with bell-shaped perianth. 2. Any plant of the bellwort family (*Campanulaceae*). —electric or magnetic b., a gong run by the action of an electromagnet in attracting its armature when the circuit is closed by means of a push-button, generally at a distance: usually giving a rapid succession of blows by causing the spring armature itself to make and break the circuit. Compare MAGNETO-PHONE, extension-b., n. —Teleph. An auxiliary bell, connected with and situated at some distance from the telephone instrument, in a house, office, etc.—golden b. (*Bot.*) any plant of the genus *Forsythia*; so called from the golden-yellow blossoms.

—Liberty B. (*U. S. Hist.*), the bell which first rang out in celebration of the signing of the Declaration of Independence by the Continental Congress, July 4, 1776. It now hangs in the Philadelphia State House (Independence Hall). It was brought from England in 1752, and recast in Philadelphia in April and June, 1753, the words "Proclaim liberty throughout all the land, unto all the inhabitants thereof" (*Lev.* xxv, 10), being then placed upon it. It was cracked on July 8, 1835, while being rung in memory of Chief Justice Marshall.

Until then it had been called annually on the Fourth of July.—to hear away the b., to win the prize, as at a race. —to bear the b., to be the leader. See BELL-WETHER.

—to lose the b., to be vanquished in fight.—to shake the bells, to give notice; sound an alarm.

bell', n. The cry of a deer, etc. See BELLING, n.

bell', n. A hubble; as, a foam-bell.

bell', 1 bel; 2 bel, n. 1. Acton, pen-name of ANNE BRONTË. 2. Alexander Graham (c. 1847-1922), a Scottish-American physicist; son of Alexander Melville; inventor of the telephone. 3. Alexander Melville (c. 1819-1905), a Scottish-American educator; inventor of visible speech. 4. Andrew (c. 1753-1832), a Scottish teacher who founded a monitory system of instruction. 5. Sir Charles (c. 1774-1842), a Scottish anatomist and physiologist; *The Hand*, etc. 6. George Joseph (c. 1770-1843), a Scottish lawyer; brother of Sir Charles; *Commentaries on the Law of Scotland*. 7. Henry (c. 1767-1830), a Scottish mechanical engineer; built the "Comet," the first successful steamboat in Europe, 1811. 8. Henry Glassford (c. 1803-1874), a Scottish lawyer, poet, and miscellaneous writer. 9. Henry Haywood (1807-1868), a U. S. admiral at New Orleans, April, 1862; drowned off Japan. 10. Henry Thomas Mackenzie (c. 1852- ), a Scottish poet, critic, lecturer, and author. 11. John, of Autermony (1691-1780), a Scottish physician and writer. 12. John (c. 1768-1820), a Scottish anatomist and surgeon. 13. John (c. 1787-1869), an American lawyer; Secretary of War, 1811. 14. Robert (c. 1800-1876), an English journalist and miscellaneous writer; *British Poets*. 15. Thomas (1792-1889), an English naturalist and writer; *History of British Quadrupeds*. 16. A county in Kentucky; 369 sq. m.; county-seat, Pineville. 17. A county in Texas; 1,091 sq. m.; county-seat, Belton.

[BELLA.]

Bel'la, 1 bel; 2 he-lä, n. Diminutive of ARABELLA: ISABELLA. —b. bella, Stefano Della (c. 1610-1664), an Italian designer and engraver. —b. bella, n. [*depriment*, France.]

Bel'lae, 1 bel'lä; 2 be-lä, n. A town in Haute-Vienne.

bel'la-don'na, 1 bel'-ä-don'a; 2 bel'-ä-dön'a, n. 1. An erect European perennial herb (*Atropa belladonna*) of the nightshade family (*Solanaceae*), with many-seeded cherry-like fruit and purplish drooping axillary flowers; deadly nightshade. All parts of the plant are poisonous and contain the alkaloid atropin. Extracts of the root and leaves are variously used medicinally. See NIGHTSHADE.

—Belladonna. The name is due to the use of it by ladies to give expression to the eyes, the pupils of which it expands.

series of hydroxylated aromatic corbinnls formed from phenols by heating with benzonitrilchlorid. [**BENZON.**] en'zene, 1 ben'zin; 2 ben'zén, *n.* 1. A colorless, volatile, inflammable liquid compound (C<sub>6</sub>H<sub>6</sub>) obtained chiefly from coal-tar by fractional distillation: preferred word for *benzol*. It is produced synthetically when acetylene is heated to a high temperature; and is also formed when benzoic acid is heated with lime. It burns with a luminous flame, has an ethereal odor, and is useful as a solvent, dissolving fats, resins, iodine, phosphorus, etc. It is employed as an illuminant in gas-manufacture; and is the starting-point in the formation of the compounds of the benzene series. 2. Benzin. [**BENZON.**] —benzene ring or nucleus, the graphic formula of benzene. The hexagon formula (see diagram) shows that the six hydrogen atoms have equal value. Hence there can be but one mono-substitution product for a single element or radical. A di-substitution product may have three modifications according to the relative position of the substituting atoms or radicals, such positions being indicated by the prefixes *ortho*-, *meta*-, and *para*-, which correspond to the positions (1, 2), (1, 3) and (1, 4) when the number notation (see diagram) is used. Thus *meta*- or *m*-dioxibenzene would be written (1, 3) di-oxybenzene. When the substituted atoms or radicals are similar, the tri-substitution products are called: (1) *adjacent*, *vicinal* (*v*), or *consecutive* when the atoms or radicals are different, occupying the positions 1, 2, 3; (2) *unsymmetrical*, *asymmetrical* (*a* or *as*), or *irregular* when two atoms or radicals are adjacent (occupying the positions 1, 2, 4); (3) *symmetrical* (*s*) when all the atoms or radicals are separated (occupying the positions 1, 3, 5).—*b* series, a series of hydrocarbons that contain the benzene ring.—*b*. sulfonic acid, a compound (C<sub>6</sub>H<sub>5</sub>.SO<sub>3</sub>H) obtained by boiling benzene with sulfuric acid.—*b*. benzene-noid, *a.* Resembling benzene; belonging to the benzene series. en'zi-dám, 1 ben'zi-dám; 2 ben'zi-dám, *n.* Same as ANILIN. en'zi-dín, } 1 ben'zi-dín, -din or -dín; 2 ben'zi-dín, -dín en'zi-díne, -or -dín, *n.* Chem. SCILLIE *Death of Wallenstein* tr. by Coleridge, act II, sc. 1.

2. (1) The trunk or main part of an animal or thing, as distinguished from the limbs and head; as, the body of a tree. (2) The Church of which Christ is the head.

1 Cor. xii, 27. 3. A person; an individual; as, if a body meet a body: usually with any, every, no, or some prefixed; as, anybody; somebody.

She is a merry little body, and her laugh is very pleasant.

CHRISTINE C. BAUSCH *Inside our Gate* p. 59. [u. r. 1889.]

Besides the resort to pronouns of a particular person in order to achieve the effect of a pronoun impersonal, we have also some substantives which have been pronounalized to this effect, as person, people, body, etc.

EARLE *Philol. Eng. Tongue* ch. 8, p. 445. [CL. F. 1873.]

4. The chief, central, or principal part or mass of anything; as, the body of a church; the main body of an army. 5. The box or bed of a carriage or other vehicle, containing or supporting the load, and carried upon the wheels, trucks, or runners; also, the central part of an aerial vehicle. 6. *Mech.* A mass of matter, considered separately from other matter.

When the distance between two bodies is doubled their mutual attraction falls off to one-fourth of what it formerly was.

P. G. TAIT *Recent Advances* p. 356. [MACM. 1876.]

7. *Geom.* A solid; that which has length, breadth, and thickness. 8. A collection of persons, things, facts, principles, or the like, considered as one whole; as, a deliberative body; n body of regulations.

In every representative body properly constituted the people are practically present.

STOWEN *Speeches and Addresses* p. 207. [u. r. 1856.]

9. Opacity, density, or consistency; hence, the substantial part or quality, as, a paint with body; a wine with body. 10. *Mus.* (1) The resonant or rotund quality of a tone. (2) The resonance body of a musical instrument. 11. *Print.* The size or depth of type, as distinguished from its face or style. 12. That part of a dress, cloak, or other garment that covers the body; waist; as, the body was sleeveless. 13. *Mining.* A mass or deposit of metal-bearing ore. 14. *Chem.* A cucurbit. 15. *Metaph.* An entity or substantial existence: (1) Matter as opposed to spirit; physical substance.

But we have seen that we know body as an existence, in operation, and with, as Mr. Mill allows, a permanence; it is therefore a substance. It is vastly more than a "possibility"; it is an actuality.

McCOSH *Fundamental Truth* p. 163. [u. r. 1871.]

(2) Anything possessing metaphysical substantiality.

For all bodies agree in this, that they involve the conception of one and the same attribute.

SPINOZA *Ethics* pt. II, prop. xiii, lem. 2.

16. *Ordnance.* The tube of a built-up cannon. 17. *Theol.* (1) The sacramental bread, believed in some churches to represent Christ's body, and in others to be

the body itself. (2) A supernatural essence attributed to the human body after the resurrection.

Sown a natural body; it is raised a spiritual body. 1 Cor. xv, 44.

18. The hull of a ship; also, a section of it when seen from different points; as, the fore body. 19. *Law.* The main part of an instrument as distinguished from the recitals and other introductory parts, the signatures, etc.

		thirty-sixmo....	3 1/2 x 4

Medium octavo. Broad quarto. Varies in size up to 10 x 13 inches. Usually less than 7 x 8 1/2 inches.

Of the terms given above, *quarto*, *octavo*, and *duodecimo* are often written 4to or 8vo or 12mo, and *octavo* and *duodecimo* are frequently spoken of as *eighth* and *twelve*. The other terms are written as given or with the numeral followed by the suffix *-mo* or the degree-mark, as *36mo* or *36°*.

The measurements stated are by no means absolute, as the nomenclature varies in different countries and with different publishers. There are other designations sometimes used, as *Imperial quarto* (15 in. by 11 in.) and *pot quarto* (7 1/4 in. by 6 1/2 in.).

For names of materials used to bind books, see *LIST* under *BOOKBINDING*.

**book**, n. 1. A number of sheets of paper bound or stitched together, whether blank, written, or printed, used for any purpose. *Specif.* (1) A printed and bound volume of some bulk, as distinguished from a pamphlet.

In copyright law a *book* is any matter that is expressive of thought or intellectual conceptions clothed in language written, printed, or graven, and may consist of a single sheet, as of music. Its character and purpose are the test, not its size; consequently, the name does not extend to a business label, nor to a mercantile trade-mark.

The earliest book properly so called, is now generally believed to be the Latin Bible, commonly called the *Mazarin Bible* (1450 or 1452). *HALLAM*, *Lit. Europe* vol. i, p. 167, (iss. c. 1863.)

(2) A volume prepared for written entries or words, as a note-book; cash-book; day-book. 2. A literary composition or treatise of some length; as, he is writing a *book* on Egypt; the *books* of the ancients were in the form of scrolls or tablets.
